

Power under control?

Absolutely.

The IEC 61850 open communication standard provides a common framework for substation automation and facilitates interoperability across devices and systems. ABB's IEC 61850 compliant systems enable real-time control and monitoring and help maximize availability, efficiency, reliability and safety. They enable flexibility for multi-vendor integration and extension, in addition to supporting enterprise-wide data integration for efficient power system management. With an unparalleled installed base and a proven track record of technology and innovation, ABB is a substation partner you can depend on.
