FDCO-01/02 DDCS communication modules

Introduction to the manual

- Safety in installation and maintenance

These instructions are for all who install or connect an optional module to a drive, converter or inverter and need to open its front cover or door to do the work.

⚠️ WARNING! Obey these instructions. If you ignore them, injury or death, or damage to the equipment can occur.

- If you are not a qualified electrician, do not do installation or maintenance work.
- Disconnect the drive, converter or inverter from all possible power sources. After you have disconnected the drive, converter or inverter, always wait for 5 minutes to let the intermediate circuit capacitors discharge before you continue.
- Disconnect all dangerous voltages connected to other control signal connectors in reach. For example, it is possible that 230 V AC is connected from outside to a relay output of the drive, converter or inverter.
- Always use a multimeter to make sure that there are no parts under voltage in reach. The impedance of the multimeter must be at least 1 Mohm.
Target audience

This manual is intended for people who plan the installation, install, start up, use and service the communication module. Before you do work on the module, read this manual and the applicable drive, converter or inverter manual that contains the hardware and safety instructions for the product in question.

You are expected to know the fundamentals of electricity, wiring, electrical components and electrical schematic symbols.

The manual is written for readers worldwide. Both SI and imperial units are shown.

Terms and abbreviations

Later in this manual, term drive substitutes for string drive/converter/inverter.

Hardware description

The FDCO DDCS communication module enables fiber optic connection on the DDCS protocol for ABB drives. The module includes the connectors for fiber optic DDCS channels Ch A and Ch B (see 1 and 2 below) and selectors for both channels to make sure that the transmitter current is optimal for the cable length (see 3 and 4 below).

The module makes the signal and power connection to the drive through a 20-pin connector.

Mechanical installation

Unpacking and checking the delivery

1. Open the package.
2. Make sure that the package contains:
   - FDCO-0x module
   - This manual.
3. Make sure that there are no signs of damage.
Installing the module

WARNING! Obey the safety instructions. If you ignore the safety instructions, injury or death can occur.

See the drive hardware manual for the position of the module in the drive. Plastic pins, a lock and one screw hold the module in place. The screw also makes an electrical connection between the module and drive frame for cable shield termination.

To install or remove the module from the control unit:

1. Pull out the lock.
2. Put the module carefully into its position on the drive.
3. Push in the lock.
4. Tighten the screw. Tightening torque: 0.8 N·m.

Note: It is necessary to tighten the screw correctly to fulfill the EMC requirements and to ensure the correct operation of the module.
Electrical installation

Notes:

- Transmitter and receiver have to be of the same type at both ends of the link.
- Observe color coding and terminal markings so that transmitters are connected to receivers and vice versa.
- If multiple devices are to be connected to one channel, connect them in a ring.

1. Lead the fiber optic cables from the external device to the appropriate channel(s) of the FDCO.

2. Inside the drive, route the cables as shown in its hardware manual. Make sure the cables are not kinked or laid against sharp edges.

3. Select switch positions for both channels to match the cable lengths according to the following table.

   Using a transmitter current that is higher than recommended reduces LED lifetime and increases power consumption and heat generation.

<table>

Technical data

- Dimension drawing
**Installation**
Into an option slot on the drive control unit

**Degree of protection**
IP20

**Ambient conditions**
The applicable ambient conditions specified for the drive in its hardware manual are in effect.

**Package**

**Connectors**
- 20-pin F-series module connector
- 2 transmitter/receiver connector pairs for fiber optic cables
- Baud rates:

<table>
<thead>

</tbody>
</table>

**Operating voltage**
3.3 V DC

**Current consumption**
300 mA max
General

- Complies with standards IEC 61800-3, IEC 61000-4-4, IEC 61000-4-5, IEC 61000-4-6, IEC 61000-4-2, IEC 61000-4-3, RoHS
- Printed circuit board conformal coated
- Printed circuit board materials UL Recognized
Further information

Product and service inquiries
Address any inquiries about the product to your local ABB representative, quoting the type designation and serial number of the unit in question. A listing of ABB sales, support and service contacts can be found by navigating to www.abb.com/searchchannels.

Product training
For information on ABB product training, navigate to www.abb.com/drives and select Training courses.

Providing feedback on ABB Drives manuals
Your comments on our manuals are welcome. Go to www.abb.com/drives and select Document Library – Manuals feedback form (LV AC drives).

Document library on the Internet
You can find manuals and other product documents in PDF format on the Internet. Go to www.abb.com/drives and select Document Library. You can browse the library or enter selection criteria, for example a document code, in the search field.
