TOLERANCE OF KEY

- It is suitable for direction of rotation:
  - CW: direction of rotation looking at motor drive end shaft extension.
  - CCW: direction of rotation looking at motor drive end shaft extension.

The customer is responsible for the design and construction of the foundation. It shall be sufficiently rigid to withstand short circuit forces, to avoid resonance vibrations. The foundation shall be designed so that the natural frequency of foundation together with machine is not within 20% of the running speed frequency. The customer is also responsible for lateral and torsional critical speed analysis of the complete installation.
