ABB lighting Presentation

ABB lighting

For the past 80 years ABB lighting products have been designed and manufactured in Lyon, France in strict conformity with French and European quality standards (CE, NF).

The key factor to this success was the company's ability to listen carefully to the requirements of wholesalers, installers, and architects, and design products in line with the needs of the commercial and residential sector.

Key points and philosophy

ABB lighting has its focus on lighting solutions for commercial and residential buildings. This strategy enables it to come up constantly with innovative products dedicated to the needs of stakeholders in this specific market segment.

The added values derive from three factors, which are the main focus of every product development.

Design

The design gives to the product the esthetical aspect absolutely necessary to melt the product into the environment. The light source should be invisible.

Performance

To ensure brilliant features, the cutting edge LED chips are selected and electronic drivers are designed for our products.

Quality

All the materials and devices used in the product manufacturing are top quality to ensure premium solutions. Each product includes an optical system to have the best quality of light, and to reduce glare.

Lighting

General skills

Basic concept

CRI: Color Rendering Index

CRI describes the ability of a light source to reproduce the colors of objects in comparison with an ideal or natural light source. CRI is always between 0 and 100. Natural light has the best CRI possible i.e 100.

Color of temperature

Color temperature refers to a characterization of the spectral properties of a light source. Low color temperature is the warmest, the most orange light while high color temperature is the coldest, the bluest light. The standard unit of measurement for color temperature is Kelvin (K).

Luminous flux

In lighting, the luminous flux is the quality of light emitted in all directions around the source. This is the measure of the perceived power of light. Units: Lumen (lm).

Lux

The Lux (symbol: lx) is the standard unit of luminance and luminous emittance, measuring luminous flux per unit area. This is the quantity of light on a surface.

Efficiency

This is the performance of a light source, the quantity of electricity (W) needed to produce a lumen. Unit: lm/W.

The technologies

There are different ways to obtain light. Throughout history the light sources have changed, and different technologies have evolved.

Incandescent

In spite of a perfect quality of light, this light source is outdated because of a very low efficiency. This solution has been banned by European regulations.

Halogen

Working on the same technological principle than the incandescent lamp, this solution has a better efficiency due to the halogen gas contained in the bulb. However, this isn't enough for it to be regarded as an environmentally friendly solution.

Fluorescent

Compact fluorescent lamps allow up to 80 % energy saving in comparison to the incandescent technology. Available in different color temperature and with ballast integrated or not, CFL is a good alternative for green lighting solution.

LED

The future of lighting. The performances of this technology makes it possible to reduce the carbon foot print of the building and achieve substantial cost saving.

LED

Cutting edge technology

LED vision

In order to drive innovation ABB has established two of its own laboratories in Lyon, where products are developed and tested against high French and European standards. The facilities are located in close proximity to the manufacturing plant, in order to ensure the quickest reaction time for our customers.

Our LED products are using the last generation of LEDs to offer the best performance for your application. The LEDs are fixed into an aluminum diffuser to optimize heat dissipation and improve life time. Thanks to a special polycarbonate dedicated to LED, the transmission and the uniformity across the diffuser is state-of-the-art. These features make it a premium solution for LED lighting.

Because LED is very sensitive to high temperatures, a special driver with a self-protected system is designed: in case of an increase of the operating temperature, a thermal protection adapt the nominal current to protect the LED and extend the life time.

LED advantage

Eco friendly

Using cutting edge LED technology, to reduce the carbon footprint and the total cost of ownership of the building.

Heat management

Aluminum-based heat sink for optimized heat dissipation.

Maintenance savings

Very long life time up to 50 000 hours (70 % lumen maintenance at to 25 °C).

Instant light

100 % of the light output is available instantly even in low temperature conditions.

Clever electronic devices

Integrated driver designed internally to perfectly protect and run the LED chip.

LED

The future of lighting

Why using LED?

LED, a cutting edge technology

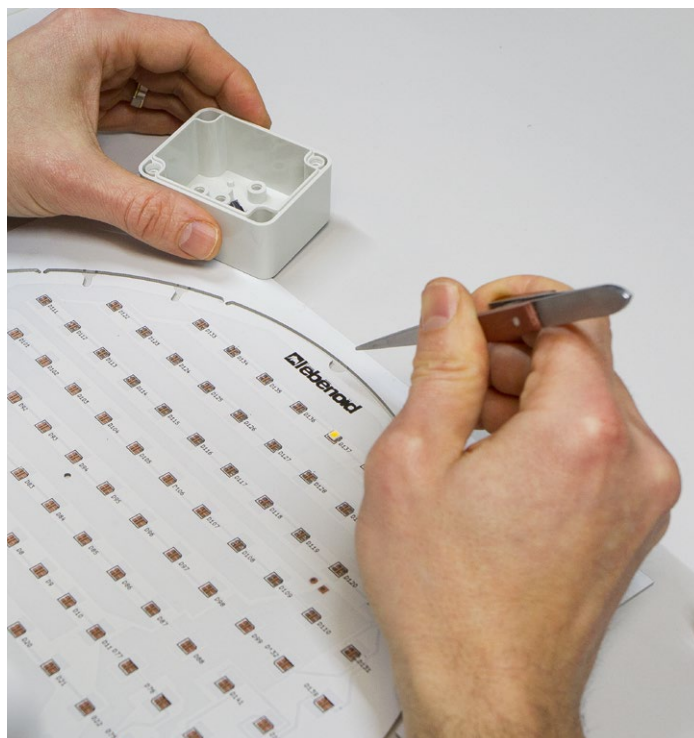

Today, LED (Light-Emitting Diode) is established as a global lighting source and gives a concrete answer to reduce the CO₂ emission and carbon footprint of a building, and to decrease total cost of ownership. Historically used for ambiance and decorative lighting, LED chips reach today incredible technical features. The quality of light (Color rendering Index, CRI), efficiency and cost enable a generalization of the applications from ambiance to general lighting.

LED, no maintenance

In the ABB strategy, quality is always in the focus. Using the last generation of LED chips, we ensure the highest quality, which means a long life time, luminous flux stability, color temperature homogeneity, CRI, and heat radiation. Drivers, which are necessary to supply constant current to the LED, are designed internally in order to drive the LED chip at its optimal current. This way the LEDs do not only save you money through reduced energy consumption, but also through reduced maintenance expenses.

The perfect technology for presence detector and timer

Compact fluorescent lamps (CFL) showed, in some applications their limits. In fact, used on a timer or on a presence detector, the LED appears to be the most adapted solution. Indeed, unlike to the LED and because of the high sensibility to switch cycles, the life time of CFL will decrease dramatically. The electronic systems implemented by ABB are conceived to protect the LED technology. In fact electronic devices are added to the driver in order to protect the LED against overheating and create an innovative solution to be used in the most extreme conditions.

Sextan

Saving energy never shined so bright

A great combination of aesthetics, robustness and efficiency – always fitting your application. The Sextan range provides a comprehensive solution for single rooms or whole building concepts – indoors and outdoors. Due to its very low power consumption and the long-lasting LED lights (up to 50 000 hours) or CFL lamps (up to 15 000 hours), the Sextan helps to reduce the carbon footprint and the maintenance costs of a building. On other hand, the Sextan solution offers a unique design in various colors and even a vandal-resistant model for use in public buildings.

Sextan Vandal-resistant

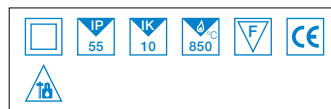

Sextan Premium Wall-mounted

Features:

- High level solution for upper commercial and residential segment
- Classic version: polycarbonate body and diffuser
- Premium version: aluminum body and polycarbonate diffuser
- IP44 or IP55 for an indoor and outdoor use
- Vandal resistant thanks to IK10 rating and theft proof screw (except wall-mounted version)
- Easy installation with built-in driver and rapid connector
- Available in different colors and finishes
- DALI version available for 2 x 26 W.

Sextan Vandal-resistant Polycarbonate

Atoll C320 Square design

Atoll C320 is an esthetical solution for corridor lighting. Thanks to the square design and the back lighting effect, Atoll C320 is definitely an innovative solution without any compromise between design, visual comfort and efficiency.

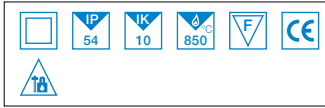

Atoll C320

Features:

- Wall or ceiling mounted
- IP54 for an indoor and outdoor use
- Vandal resistant thanks to IK10 rating, and theft proof screw
- Polycarbonate body and diffuser
- Available in 4 different colors
- Square shape with back lighting effect
- DALI version available for 2 x 26 W.

Squad

Vandal resistant solution for industrial area

Squad combines a timeless design with excellent technical properties. Thanks to its IP65, and IK10 rating, plus theft protected screws, this is a vandal resistant solution for indoor and outdoor use.

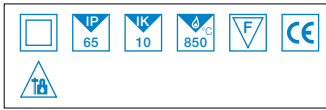

Squad

Features:

- Round and conventional design for an industrial use
- Wall mounted or ceiling installation
- Polycarbonate body and diffuser
- Available in black and white
- IP65 for an indoor and outdoor use
- Vandal resistant thanks to IK10 rating, and theft proof screw
- DALI version available for 2 x 26 W.

Dune

Multifaceted solution

Due to its concept, consisting of a base unit and a single ring, it is very easy to install. The minimum diameter (245 mm) and the visor option give the Dune range a very qualitative aspect and make it an aesthetic solution for indoor and outdoor application.

Dune

Dune Visor

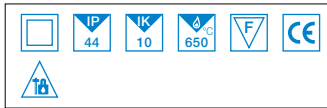

Dune Casquette

Features:

- Architectural solution, small diameter (245 mm) for an easy installation
- Polycarbonate body and diffuser
- IP54 indoor and outdoor use
- Vandal resistant
- The different designs are available in black and white.

Havana

Oval architectural solution

Havana's distinctive oval shape makes it an eye-catcher especially in the outdoor area, i. e. entrance, facade, or balcony. The combination between the aluminum body and the glass diffuser together with the oval shape makes Havana a very qualitative architectural solution.

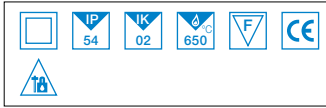

Havana

Features:

- Oval shape
- Architectural solution: Aluminum body and glass diffuser
- IP54 and IK02
- Black or white finish.

Havana

Havana - White

Havana - Black

Axiome

The eco-design solution

Axiome is a range of functional and versatile fixtures fulfilling all the requirements of installers when it comes to easy installation and electrical connection. This is a solution coming from an innovative eco-design with specific focus on reducing installation time. Available in two sizes with different lights sources.

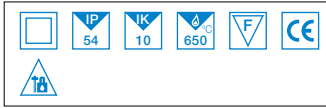

Axiome

Features:

- Basic solution
- Polycarbonate diffuser
- IP54
- IK10 and torx screws
- Easy to install – Only two parts (body and diffuser) – Rapid connector
- Available in two diameter Ø 260 mm (T1) and Ø 320 mm (T2).
