# Product life cycle announcement

## ICX interchangeable overhead distribution cutout

Dear ABB customer,

ABB hereby announces updates to the lifecycle phase for the X-series ICX styles beginning in X1J, X2J, and X5J, all 100 A or 300 A fused cutouts. As announced in June 2022, these styles moved from the active lifecycle phase to the classic phase effective July 1, 2022. The classic phase will be extended until June 30, 2024, immediately followed by the limited lifecycle phase. These styles will be made obsolete on 12/31/2024.

In the limited lifecycle phase orders will only be accepted while inventory supplies last. Please change systems and specifications prior to June 30, 2024.

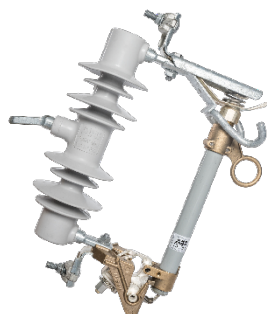

Please find the list of the concerned product versions and the corresponding replacements below. The new A-series ICX is available per the latest IEEE standards and is compatible with the ratings and mounting dimensions of the X1J, X2J, and X5J legacy cutouts.

Product ratings	Legacy styles	New styles	Classic phase	Limited phase	Obsolete
15 kV & 27 kV, 100 A & 300 A	X1J	AJ11	July 1, 2022, to June 30, 2024	July 1, 2024, to December 31, 2024	December 31, 2024
	X2J	AJ25			
	X5J	AJ25			

Cutouts cannot be serviced or repaired; however, the fuse tubes can be replaced. Spare or replacement fuse tubes are available under new corresponding part numbers (available in the ordering catalog). When they are no longer available, they can be replaced by new interchangeable products. This approach helps ensure long-term support to obsolete discrete equipment.

X-series ICX

A-series ICX

Thank you for your understanding and cooperation. We hope this information helps you initiate evolution planning of the installed systems/products. Please feel free to contact us in case you need more information about this phase-out notice.

Yours Sincerely,
