
Optimize power flows and environmental safety with Joslyn Hi-Voltage[®] capacitor switches from ABB.

It's not just a switch. It's an energy-efficiency upgrade.

New environmental regulations requiring a reduction in carbon dioxide emissions will result in coal plant retirements, thereby creating a greater need for energy efficiency.

Volt-VAR optimization to reduce system losses starts with Joslyn Hi-Voltage capacitor switches from ABB. Maximize asset utilization through optimized power flows voltage regulation, and power factor correction.

With Joslyn Hi-Voltage capacitor switches, you also get:

- The solid-dielectric capacitor switch brand leader for nearly 60 years
- Oil- and SF6-free technology that effectively eliminates maintenance
- Zero voltage closing for improved power quality
- Outstanding compatibility with various control platforms
- Substation and distribution class capacitor switches

Best of all, you get the outstanding support of ABB. To learn more, contact your ABB representative or visit solutions.abb/cable-accessories-apparatus.
