

Ships that consume 15% less fuel?

ABB's compact propulsion systems help cruise and cargo vessels to save fuel, create more space on board and improve maneuverability. Our turbochargers are fitted to more than 50 percent of the world's tankers and container ships, helping them to burn fuel more efficiently and produce four times more power. On the high seas, we can help eliminate tons of CO₂. Every single day. www.abb.com/betterworld

Absolutely.
