As an open Supervisory Control and Operational Data Management system, zenon securely delivers supervision, control, data acquisition, scheduling and performance reporting to your customers production assets, scaling from single machines to unified multi site factory solutions. zenon is the easy to integrate platform for machine builders and system integrators.

#### Turning data into information

With its more than 300 supported communication protocols, simple to setup ERP and cloud interfaces, zenon becomes a key component in the Internet of Things, Services and People.

#### Securing information integrity

Smart integration into all processes and security systems – zenon is protected by a security system designed for being deployed into a critical infrastructure.

#### Creating insight for better business decisions

zenon comes with audit trail, batch and production scheduling capabilities for the food and beverages industries and is a certified energy data management system.

Easy to use reporting functions give deep insight into your production processes and allow for quality assurance, production optimization and online reporting.

#### Engineering productivity

zenon's multi user engineering capabilities and object oriented design ensures low startup cost and high engineering productivity for your team. Through the open engineering interface architecture and the integration with Automation Builder, zenon perfectly integrates with your engineering tool chain.

#### Low total cost of ownership

The extensive life cycle of zenon, together with its backward compatibility and the possibility to engineer mixed version environments ensures simple and cost effective extensions of your customer's production assets.

#### Factory automation solutions from ABB

With zenon, ABB completes its factory automation products portfolio and delivers drives, automation, electrification, support and service for machine builders and system integrators from a single vendor.

Your complete automation solution starts with ABB.

# Supported operating systems

- All operating systems are supported in the multi-lingual version.
- Windows RT 8 and Windows RT 8.1 are not supported due to the system.
- Itanium processors are not supported for any operating system.

## Overview of supported desktop operating systems for Windows 10

Windows version	zenon Supervisor / Operator	Everywhere by zenon	zenon Logic Runtime
Windows 10 Home	■	■ (PC)	■
Windows 10 Mobile	■	■ (Mobile)	
Windows 10 Pro	■	■ (PC)	■
Windows 10 Enterprise	■	■ (PC)	■
Windows 10 Education	■	■ (PC)	■
Windows 10 Mobile Enterprise		■ (Mobile)	
Windows 10 IoT Core			■
Windows 10 IoT Enterprise (Windows 10 Enterprise LTSC)	■	■ (PC)	■

## Overview

### Supported operating systems and required service packs:

Operating system	zenon Editor	zenon Runtime	zenon Web Server	zenon Web Client	zenon HTML Web Engine	zenon Logic Runtime	zenon Analyzer Server
<b>Windows 7</b> (Professional, Enterprise and Ultimate version, x86 and x64 versions)	SP 1	SP 1	SP 1	SP 1	SP 1	SP 1	
<b>Windows Embedded Standard 7</b> (if all necessary operating system components exist)	Cannot run	SP 1	SP 1	SP 1	SP 1	SP 1	
<b>Windows 8 and 8.1</b> (Standard, Professional, Enterprise version, x86 and x64 versions)	SP 0	SP 0	SP 0	SP 0	SP 0	SP 0	Only x64 with SP 0
<b>Windows Embedded 8 Standard</b> (if all necessary operating system components exist)	Cannot run	SP 0	SP 0	SP 0	SP 0	SP 0	
<b>Windows 10</b> (Home, Pro, Enterprise, Education, IoT Enterprise, version, x86 and x64 versions)	SP 0	SP 0	SP 0	SP 0	SP 0	SP 0	Only x64 version of Home, Pro and Enterprise with SP 0
<b>Windows Server 2008 R2</b> (All editions with the exception of Core)	SP 1	SP 1	SP 1	SP 1	SP 1	SP 1	
<b>Windows Server 2012 and 2012 R2</b> (All editions with the exception of Core)	SP 0	SP 0	SP 0	SP 0	SP 0	SP 0	Only x64 with SP 0

## Up to Windows 8.1

### Overview of supported servers and desktop operating systems up to Windows 8.1

	Windows Embedded 7/8 Standard	Windows Embedded 8.1 Pro/Industry	Windows 7 SP1/Windows 8 and 8.1/ Server 2008 (R2) SP1, 2012 and 2012 R2	Windows CE

- Included
- Optional

#### zenon Operator Remarks:

- For the use of 4096 and 8192 TAGs with Windows CE 6.0 or higher, a more powerful hardware is required.
- Please state the operating system you use when placing your order. The respective lot size for obtaining the zenon Operator licenses is to be clarified with the local ABB sales office.

#### zenon Operator Restrictions:

- No redundancy possible.
- No distributed engineering (1 project + global project possible)
- Only one instance per driver (as Standalone/Server/Client)
- No VBA/C#/VB.NET possible in the Runtime, ActiveX and access from external programs supported.

Note the general operating system restrictions of Win CE systems (see zenon online help).

# zenon Supervisor

## Delivering strong performance. Securely.

Visualize, control and optimize complex production facilities with zenon Supervisor. zenon Supervisor is platform-independent and easy to integrate. With zenon Supervisor, you go for maximum security and optimal connectivity to existing machine environments.

## Information

zenon Supervisor turns production data into information. With its more than 300 supported communication protocols, zenon Supervisor natively connects to nearly any existing automation and control infrastructure. Once refined in zenon Supervisor, your production information gives you insight and control over your production assets – everywhere.

## Integrity

zenon network technology with seamless redundancy and circular redundancy guarantees full data security, maximum availability without downtimes and no loss of your valuable production data. zenon is impressive not just technically, but also economically.

zenon is continually being adapted to modern security standards. This provides stable and secure equipment running. zenon is secure for being used in critical infrastructure.

## Insight

You will be informed of whatever is happening in as detailed a way as you wish. Starting with local HMI and operator workplaces, history of changes in engineering, up to effective reports in the runtime, right to calculating complex KPIs such as OEE.

Keep control of your production assets through outstanding transparency.

## Engineering

You can develop projects in your own exact style, use available templates and intelligent wizards. You are able to reuse once created objects in other projects and keep an overview with the multi-project administration, also when working in a team.

The Hot Reload even enables all changes to be made during a running operation. And your production keeps on running.

## Maintenance

Well documented and offering version administration, you can quickly find your way around any project and also easily access projects and equipment remotely.

## Advantages:

- Full data security, maximum availability without downtimes and no loss of data
- Integrates with existing operations and management environments through outstanding connectivity
- Develop individual projects, use available templates and intelligent wizards
- Reuse of created objects in other projects and overview using the multi-project administration, also when working in a team
- Well documented and offering version administration
- Easy access to projects and equipment remotely
- Effective reporting

# zenon Operator

## Intuitive handling, secure operation and ergonomic control

zenon Operator helps to effectively increase productivity. New and existing machines can be securely integrated into your existing systems thanks to zenon's outstanding connectivity.

As innovative HMI software, zenon Operator offers complete Multitouch support for simple and reliable handling. It's just as easy to switch between languages, units and color layout during live operation.

The zenon Recipegroup Manager gives a clear overview of the creation and management of complex recipes. Graphical, it also noticeably eases handling in the Runtime. Instead of needing to memorize all parameters of comprehensive recipes, users can create their own screen for graphical recipe management.

With zenon Operator it is possible to easily and securely operate and maintain equipment remotely. Online reload technology allows for changes to the project without having to stop plant operation.

### Advantages:

- Security at machine level
- Full integration with bigger zenon installations
- Optimum usability including Multitouch gestures
- Individually adaptable in the Runtime (languages, units, color palettes, and much more)
- Simple integration thanks to more than 300 integrated communication protocols
- Single engineering tool
- Set parameters instead of programming
- Reusability of objects, symbols and templates
- Remote maintenance and hot reload

# zenon Webserver

## Creating insight everywhere

zenon Webserver brings projects to the internet and intranets without adaptations. All screens, users, password administration, information, etc. are available online. The web client has the same look & feel and the same functionality as that of zenon Runtime. If a project changes (e.g. a new screen), the project is synchronized online on the web client. That means that all participants worldwide are up to date at all times. zenon Webserver comes in two versions: as zenon Webserver with just observation functionality and as zenon Webserver Pro with complete operation and monitoring functionality.

## Advantages

- Full process overview from every Windows PC workstation with different web browsers
- No additional project configuration required
- Changes to the project are recognized and updated online
- Client authentication
- Read (Pro: Write) access to the project possible
- Up to 200 concurrent connections are possible
- 128-bit encryption
- Optional HTTP tunneling can be activated
- Routing possible; the web server can be installed on any desired computer in the network
- The zenon Web Server can also be executed in redundant operation
- Native 64-bit support
- HTML Web Engine: Plug-in free, platform-independent HTML5 visualization. For simple dashboards and applications for the observation and operation of processes.

# zenon Logic

## Realtime operations on any device

zenon Logic is an integrated IEC61131-3 soft PLC that communicates through a huge variety of more than 300 communication protocols including fieldbuses like Profinet and Ethernet/IP, IEC61850, DNP3, BACnet and KNX. zenon Logic can be deployed on various hardware platforms, from the PC to automation hardware, and utilizes the same database as zenon Supervisor and zenon Operator.

zenon Logic simulates the PLC and offers realistic values during testing. This shows immediately how the project is running in the plant and it is possible to correct any mistakes before going live. This saves time during start-up and for project changes – with perfect project simulation.

## Advantages:

- zenon Logic is an IEC61131-3 soft PLC engine
- Full access to a variety of 300 communication protocols, including Profinet and Ethernet/IP, IEC61850, DNP3, BACnet and KNX.  
Integrated IEC 61131-3 programming environment
- Most widely used languages (IL, ST, LD, FBD/CFC and AS)

- Included
- Optional

## Trend

The Trend is used for the representation of online and historical values (Archive values) of process variables and derived process variables in form of curves. Scrolling in the Trend provides a ruler and zoom function together with a trend analysis. In contrast to the trend dynamic element, it is possible to zoom, browse, query and scale online values and values from archives.

## Historian

In zenon, the Historian takes on the saving of process data as well as the export of the archived data. The data is thus available for subsequent processing and evaluation - even outside of zenon. Infinite archive size, cloud connection, reporting based on historian, evacuation of archives into SQL database or cloud.

## Reporting

The integrated reporting in zenon serves as documentation, evaluation and presentation of process data on the basis of online and archive data from zenon. This is the transparency tool that generates insight out of production data. The report generator meets the requirements of different standards like ATV H260.

## Batch

Batch Control offers the possibility to automate batch-oriented manufacturing processes. The module complies to ANSI/ISA-S88 and the equipment model according to ANSI/ISA-S95. Batch Control in zenon and Multi-touch technology create an environment which offers complete equipment and process control, with progressive and direct interfaces; helping users to realize the power and control of both new and existing processes.

## Message Control

The optional module Message Control allows for an automatic sending and acknowledgement of messages. The sending is triggered via a function which can be linked with an event. Available media for sending include eMail, SMS and voice messages as audio or text-to-speech. The status of this transmission is logged in the Chronologic Event List (CEL).

## Everywhere

The Everywhere Server by zenon is for visualization of real-time data of a zenon project configuration on smartphones, tablets and desktop computers. There is no additional project configuration work required.

There are zenon apps available in the respective app store and you can also create your own mobile applications for the visualization of your zenon project configuration.

## Industrial Maintenance Manager

The Industrial Maintenance Manager (IMM) administers machine and maintenance data. Service intervals can comfortably be planned and administered. You can see at a glance which device, equipment, machine, etc. has to be maintained today / this week / next month etc. Additionally service work done in the past is logged.

## SAP Interface

To connect the SAP ERP level (Enterprise Resource Planning level) to the process level of zenon, both programs communicate using a two-way interface. This gives SAP users direct access to the process level of zenon. With this, companies get important basic data for just-in-time production but also for long-term planning.

## Production & Facility Scheduler

The Production & Facility Scheduler (PFS) allows executing actions (e.g. changing of a variable's set value, executing a function) for a period of time or in a time grid.

## Load Management

Successful and efficient management of power generation and energy import.

A specialised energy management system enables the largest possible amount of energy to be procured from the supplier at the lowest possible price. Most significantly, it is the avoidance of costly power peaks that is the key to these savings.

## Project simulation

With the help of the project simulation, you have the possibility of switching between simulation mode and hardware mode. You can simulate processes for test purposes in simulation mode. In this mode, switching actions are executed, recipes are sent, set values are defined etc. without these operations actually being sent to the process (such as to a PLC for example).

## Energy Data Management System

There are numerous ways of saving energy and using it efficiently. Whatever method one decides on – prerequisite is always the collection of detailed, up-to date information on energy consumption and its costs. To keep an overview of this process an Energy Data Management System (EDMS) is vital.

A EDMS supports a company in the following ways:

1. Collection of energy data
2. Reduce energy consumption of facilities
3. Increase of equipment efficiency
4. Provide figures for energy controlling
5. Evaluation of deviations to secure error-free energy provision
6. Monitoring data of new and existing equipment

zenon meets the requirements of the TÜV Süd Standard “Certified Energy Data Management” and was certified accordingly. The certification is based on a reference application which was certified according to ISO 50001.

## zenon Modules – General

Description	Type	Order Code
PLC DIAGNOSIS – SIMATIC S7-GRAPH SFC ANALYSIS	ZM-PLC-DIAG	1SAS050033R0750

# zenon Drivers

## Integrating everything

Integrating a new machine, or a completely new plant site, is not a big deal with zenon. You just need to configure the required drivers and go online again. zenon delivers over 300 communication protocols, from all the important standards to rare proprietary drivers. Thus, you can easily implement zenon into any existing equipment and deploy new machines quickly and calmly.

## Advantages:

- A variety of more than 300 protocols implemented
- Direct machine connectivity
- Full integration with zenon Operator, Supervisor and Logic
- Make zenon the entry point for your customers IoTSP strategy

Description	Type	Order Code

# zenon Gateways

## Connecting the Internet of Things

The zenon Process Gateway helps to connect to super ordinate systems securely. It incorporates itself into Runtime as an add-on and makes the desired connection. The zenon process gateway supports many different standards such as for example OPC UA, SQL, SAP, MS Azure, IEC 60870 Slave, Modbus Slave, DNP3 Slave, SNMP Server.

For machine to machine communication, zenon utilizes standards like Weihenstephan and PackML.

Together with more than 300 zenon communication protocols and drivers, these make zenon the key node in an Internet of Things (IoT) strategy.

### Advantages:

- Add-on for zenon Runtime
- Connects to superordinate systems/ Connect IT and OT
- Make zenon the entry point for your customers IoT strategy
- Supports many standards such as OPC UA, SQL, SAP, MS Azure, IEC 60870 Slave, Modbus Slave, DNP3 Slave, SNMP Server

## zenon Gateways

Description	Type	Order Code
Process Gateway - OPC Server	ZGW-OPC	1SAS053083R0750

# zenon Editor

## Engineering productivity

The zenon Editor is the control center for engineering productivity.

The zenon Editor integrates with Automation Builder, for a simple engineering workflow of ABB's factory automation hardware, including drives, PLC, panels, motion and robotics applications.

All modules need the same data basis and can be easily activated at any time via licensing. The Editor can be put together, tailored exactly to specific tasks and needs: Projects can be developed using easy and secure parameter settings of properties.

zenon brings even complex functionalities "out of the box". However, the well documented interface for VBA and VSTA enables to link individual programs with zenon at any time or to completely automate the project planning.

The zenon Editor makes it easy to create operable visualizations and to carry out very complex automation tasks in a targeted and safe way.

## Advantages:

- Fully integrated with Automation Builder, the engineering productivity suite for drives, PLC, panels, motion and robotics
- Ready to use templates for easy engineering
- Project versioning ensure a clear project organization and show change history
- An own wizard enables project comparison
- All pre-configured objects can be reused across projects.
- Many intelligent and individually configurable wizards and program assistants ease engineering, automatically take over complex tasks or perform project planning steps.
- Multiple user engineering environment

# zenon Analyzer

## Better business decisions based on realtime information insight.

With zenon Analyzer you have complete data transparency across your entire production. This wealth of production data and meta data (e.g. shifts, alarms, prices) is made accessible and understandable by the concise zenon Dynamic Production Reports.

Dynamic Production Reporting is the zenon approach to analyzing production data – as it happens. Dynamic Production reporting enables you to make immediate decisions on how to enhance your production efficiency and output. By dynamically optimizing production in this way you can achieve significant savings in costs and resources and match supply and demand far more closely.

zenon Analyzer delivers ready-made report templates like Production Reports, Reports for Energy Data Management or Operational Efficiency Reports

Production reports aggregate information per batch, article, or time filters, and allow for quality documentation or alarm management.

Consumption optimization reports show consumption evolution, cost distribution and correlation with the production, for media such as water, energy, compressed air, chemicals etc.

Reports for Energy Data Management concentrate data required by the TÜV SÜD Standard “Efficient Energy Data Management” chapter 5.6.1 Monitoring, measurement and analysis of the ISO 50001 standard.

Efficiency reports calculate KPIs such as OEE (Overall Equipment Effectiveness) over a selected period of time and production equipment

## Advantages:

- Better business decisions based on realtime production data
- Complete data transparency across the entire production improves your production by increasing production effectiveness
- Supports monitoring, measurement and analysis of energy data (like the ISO 50001 standard)
- Eliminates waste by optimizing energy and material consumption enables up-to-date benchmarks with historical production data
- Supports quality control
- Supports daily activity of production teams with reports focused on production entities (batch, articles, shifts, etc.)
- Easy integration of a huge variety of online and offline data sources
- Easy integration of new equipment

# zenon Energy Edition

## Outstanding automation performance, stability and scalability

International system integrators use zenon Energy Edition as a reliable and open platform, with special features for the Energy Industry that save valuable project configuration time. For both large and small power companies, zenon Energy Edition delivers outstanding automation control, performance, stability and scalability.

zenon Energy Edition is the industry-specific IoT software solution for power plant automation and substation automation, grid control technology and wind park management.

zenon Energy Edition is a package with special functionality for the energy sector and the procedural technology. The user benefits from easy-to-implement functions that allow for an individual adjustment of the application to the physical environment.

The drivers guarantee adherence to international standards such as IEC 61850/ IEC 61400-25, IEC 60870 and DNP3. With the seamless integration of zenon Logic, the IEC 61131-3 based PLC system, zenon Energy Edition becomes a comprehensive solution for energy automation.

zenon Energy Edition meets all requirements; from flexible and secure communication, visualization and control, to comprehensive reporting. Save time and money with one integrated solution.

## Advantages:

- Built-in drivers for communication
- Effective visualization and control projects
- Powerful reports out of the box
- Gateway configuration for IEC 60870 or DNP3
- SCL Editor for IEC 61850 documents
- Integrated IEC 61131-3 programming
- Analyzation with built-in Data Historian
- Safe command processing with the Command Sequencer

# Life cycle management for maximum return on investment

ABB has developed an automation products life cycle management model aimed at providing proactive services for maximizing availability and performance. This model not only provides optimum support to end-users but also a smooth transition to a new product when the system has come to the end of its lifetime.

The life cycle management model divides a product's life cycle into four phases: active, classic, limited and obsolete. Each phase has different implications for the end-user in terms of services provided.

## Product life cycle management model

### Active phase

The active phase starts when the product is launched. In the active phase the end user benefits from different warranty options and other services such as training and technical support. Complete life cycle services from spare parts and maintenance are also provided. The active phase ends when the volume production of a particular zenon version ceases and ABB issues an announcement of the life cycle phase change.

### Classic phase

ABB zenon users continue to benefit from complete life cycle services throughout the classic phase. The classic phase is closely aligned with ABB's research and development work to provide continuing support for its zenon products while developing future generations. In the classic phase development may be required to provide the maintenance techniques and upgrades needed to guarantee that zenon continues to operate at its peak performance. Migration to a new zenon version is recommended before the product has entered the limited phase.

### Limited phase

In the limited phase the product development has come to its end. Spare parts are available as long as components and materials can be obtained. Towards the end of the limited phase, services gradually become obsolete. In addition to the annual life cycle status reviews, ABB issues a life cycle phase change announcement, half a year prior the product becoming obsolete. This is the last opportunity to transfer to new technology before product services end.

### Obsolete phase

The product is transferred to the obsolete phase when it is no longer possible to provide services at reasonable cost or when ABB can no longer support the product technically or the old technology is not available.

### Benefits of life cycle management

The zenon software life cycle management maximizes the value of the equipment and its maintenance investments by:

- ensuring spare parts and ABB competence availability throughout the lifetime
- enabling efficient product support and maintenance for improved reliability
- adding functionality to the initial product by upgrading or retrofitting
- providing a smooth transition to new technology at the end of the product lifetime

Services offered for ABB's automation products span the entire asset lifetime, from the moment a customer makes the first inquiry to disposal and recycling of the product. Throughout the life cycle of an asset, ABB provides training, technical support and customized contracts, supported by one of the world's most extensive global sales and service networks.

#### **Pre-purchase**

ABB provides a range of services and support guiding the customers to the ideal products for their applications.

#### **Order and delivery**

Orders can be placed at any ABB office or channel partner. In some countries, ABB also offers an online order tracking system. ABB's sales and service network ensures timely deliveries and also offers express delivery.

#### **Installation and commissioning**

While many customers have the resources to perform installation and commissioning on their own, ABB and its channel partners offer professional installation and start-up services, as well as solution development support for OEM and System Integrators.

#### **Operation and maintenance**

From maintenance assessments, preventive maintenance, reconditioning of spare parts and repairs on-site or in workshops, ABB has all the options covered to keep their customers' processes operational.

#### **Upgrade and retrofit**

Frequently, ABB products can often be upgraded to the latest software or hardware in order to improve the performance of the application. Existing processes can be economically modernized by retrofitting with up-to-date technology.

#### **Replacement and recycling**

ABB provides assistance in the best replacement of products while ensuring disposal and recycling observing the local environmental regulations.
