Product durability and upgradability

ABB Microelectric® meter sockets are designed with the modularity approach, which supports and extends their lifetime. The modular design allows the meter socket to function with various neutral configurations. Additionally, spares parts are available, for replacing an existing part to repair or upgrade the product's functionality, extending its lifetime.

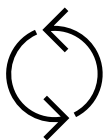

Designed for high recyclability at end of life

The recyclability rate of the product is 90%, according to EN 45555.

Sustainable material content in the packaging

Packaging is made from 91% recycled content.

Third-party verified Lifecycle Assessment

LCA compliant with ISO 14044, ensuring data accuracy and full transparency on the product's environmental impacts throughout its life cycle.
