ControlMaster CM15
Universal process indicator, 1/8 DIN
Measurement made easy
Making process control easy

Comprehensive display of process status
• Crystal-clear, full-color TFT display
• User customizable

Exceptionally easy to use
• Intuitive user interface and clear text prompts make installation, commissioning and operation quick and simple

Comprehensive I/O
• 2 universal inputs, 1 analog output and 1 relay fitted as standard

Frequency input
• Direct, high accuracy connection to electromagnetic flowmeters

Totalization and counter functions
• Calculation and display of flow total values
• Pulse counting capability

Problem-solving capability
• Flexible functionality including math and logic providing power to solve application requirements

Duty / Assist pump control
• Control of up to 6 pumps
Overview
The ControlMaster CM15 is a feature-packed, 1/8 DIN, universal process indicator. A crystal-clear, full-color, TFT display shows operators exactly the information they need to know and provides operation and configuration menus in full text making the CM15 intuitive to use and very quick to install and commission.

Available as a basic indication-only model, or enhanced through plug and play function keys and I/O modules, the CM15 offers totalization, level, math, logic, counter and alarm functions making it extremely flexible and able to solve many demanding application requirements.

MODBUS and Ethernet communication options ensure easy integration and connectivity to supervisory or control systems.
**Highly scalable**
The CM15 is highly scalable in terms of both hardware and software, enabling it to meet the demands of simple indication duties through to more complex applications. The basic CM15 provides basic indication, totalization and level functionality. Templates and functionality can be increased by adding function keys to the basic model as shown in Figure 1, while retaining previous templates and functionality.

Figure 1  Overview of template options
**Powerful operator display**
The CM15 features a full-color 5.5 cm (2.2 in.) display for displaying detailed process information to the user. Process details such as alarm messages and diagnostic information are displayed clearly in full text without the need for difficult-to-read scrolling displays.

**Example of an operator page**
Automatic selection of standard display templates immediately makes best use of the CM15’s display. Extensive customization features then enable the displayed information to be tailored to suit the process requirements.

---

**Exceptionally easy to use**
The CM15’s full text display and simple-to-navigate, pop-up menu makes operation exceptionally easy.

A programmable soft key enables commonly used functions, such as alarm acknowledgement and display selection, to be accessed easily by the operator.

---

**Diagnostics and alarm status display**
The diagnostics and alarm status display provides detailed information on any active alarm or diagnostic condition. The operator can see, at-a-glance, the status of any alarm condition present within the process. Additionally, diagnostic messages are presented clearly to the operator, enabling rapid notification and simple diagnosis of any critical instrument status condition.

Historical information of diagnostic messages can also be viewed in the indicator’s diagnostic log.
Problem solving flexibility
Extensive functionality is available to provide flexible problem-solving capability; making the CM15 much more than just a process indicator.

Process alarms
8 independent process alarms can monitor any analog signal within the CM15, enabling extensive process monitoring capability. Alarms can be used to drive physical outputs or soft-wired to other functions within the indicator.

Real-time alarms
The ‘alarm clock’ functionality provided by the CM15’s real-time alarms enables time-of-day decisions to be introduced into the indicator’s actions or specific functions to be triggered routinely at specified times.

Delay timers
Event sequencing is enabled through the use of the CM15’s delay timers. A predetermined delay and output duration can be programmed into each delay timer and timers can be linked together.

Custom linearizers
The CM15 has 2 independent 20-point custom linearizers that can be applied to any analog signal within the indicator. These linearizers can be used in applications such as level-to-volume conversion of a non-linear tank level or to accommodate special input signals or output devices.

Math
8 math blocks provide arithmetic, averaging, min. / max. hold, square root and signal switching functionality. Simple equations can be performed in a single math block or multiple math blocks can be nested together to construct complex equations.

Signal switching ‘multiplexing’ math blocks switch between 2 analog signals based on a trigger signal. For example, a backup sensor could be selected automatically on failure of a primary sensor.

Logic
8 comprehensive logic equations provide powerful interlock functionality. Inputs and outputs of the logic equations can be soft-wired to any digital signal within the indicator to maximize flexibility.

Totalizer
2 totalizers are available on the CM15. The totalizers can be configured to perform multiple functions:
- integration against an analog signal to totalize flow
- counting digital pulses
- totalization of flow based on a frequency signal from an electromagnetic flow meter

Frequency input
For maximum accuracy the CM15 can accept a frequency signal from an electromagnetic flow meter. The frequency signal can be totalized and displayed; an instantaneous flow rate can also be calculated and displayed on screen.

Communications
Extensive communication options enable the CM15 to be integrated into larger control systems easily or connected to other process instrumentation.

RS 485 MODBUS
Using RS 485 MODBUS, values and status can be communicated to and from the indicator in real-time via an RS 485 connection.

Ethernet
Optional Ethernet communications enable ControlMaster to be integrated in to an Ethernet network quickly. The following functionality is provided:
- Email
  - Notification of a critical process event or status can be made by email. Multiple events can trigger an email that can be sent to multiple recipients
- Webserver
  - ControlMaster’s integrated webserver enables the current status of the process and indicator to be viewed remotely using a standard web browser

- MODBUS TCP
  - Process values and status can be communicated to and from the CM15 in real-time using MODBUS TCP, enabling it to be integrated easily into larger control systems or connected to a data recorder.
PC Configuration

The CM15 can be fully configured using ABB’s ConfigPilot software. Available free of charge, ConfigPilot enables off-line creation and editing of configuration files. Configurations are transferred to and from a controller via its standard IrDA port and a USB IrDA adapter.

Figure 8  Analog input configuration

Figure 9  Profile configuration

Figure 10  Configuration report generation
Bank control

Bank control enables improved control of multi-element output devices such as banks of heaters, pumps and fans. Aimed at minimizing wear caused by over-use of one specific ‘duty’ device, bank control enables wear to be levelled by sharing duty and assist handling between every device in the bank.

Ideal for pump control applications in the water and waste water industry. Up to six pumps can be controlled each with independent on and off trip points (see Figure 11). The CM15’s universal process input, complete with transmitter power supply, makes it suitable for connection to many kinds of standard level transmitters.

Bank control provides users the choice of either ‘Rotate’ or ‘First In, First Out (FIFO)’ wear-levelling schedules. Rotate cycles which pump is the first to switch on during a pumping event. FIFO ensures that the last pump to switch off is the last pump to be called again. Figure 12 details Rotate and FIFO cycling for a 3-pump system.

---

**Figure 11** Independent on and off trip points

**Figure 12** Rotate and FIFO cycling for a 3-pump system
Application templates

To minimize commissioning time, the CM15 features up to 8 preconfigured templates. Simply selecting the required template configures the CM15’s function blocks and display automatically. Customization of the preconfigured templates is also possible, providing the flexibility to create customized solutions.

Single PV indication
This template provides indication of a single process value. The example in Figure 13 shows the CM15 being used to indicate the temperature of a heat treatment furnace.

![Figure 13 Single PV indication](image)

Single PV with totalization
This template adds totalization to the single PV indication template. In the example in Figure 14, the CM15 is monitoring a pipeline to provide indication of instantaneous flow rate and totalization and could be connected to the flowmeter via an analog (for example 4 to 20 mA) or frequency signal.

![Figure 14 Single PV with totalization](image)

Single totalizer
This template provides totalization only. Figure 15 shows the CM15 being used to count the number of products passing a specific point on a production line.

![Figure 15 Single totalizer](image)
...Application templates

Single level with volume
The single level with volume template adds level specific functions to the single PV indication template. The volume contained within a vessel can be calculated and indicated and products of varying specific gravity accounted for. In Figure 16, the CM15 is shown monitoring the level of product in a storage tank and calculating the associated volume.

Figure 16  Single level with volume

Dual indication
This template provides indication of 2 process values. Variations of this template are available providing dual PV with totalization, dual totalization or dual level indication. The example in Figure 17 shows a single CM15 providing indication of both the flow through, and temperature of, a heat exchanger.

Figure 17  Dual indication
**Specification**

**Operation**

Display
- Color, ½ VGA TFT, liquid crystal display (LCD)
- with built-in backlight

Language
- English, German, French, Italian and Spanish

Operator keypad
- 4 tactile membrane keys

**Security**

Password protection
- Basic / Advanced – user-assigned password protection
- (not set at factory)

**Standard functions**

Base templates
- Single PV indication
- Single PV indication + totalizer
- Counter
- Single PV indication + level

Dual templates
- Dual PV indication
- Dual PV indication + totalizer
- Dual counter
- Dual PV indication + level

**Process alarms**

Number
- 8

Types
- High / Low process
- High / Low latch

Source
- Fully configurable
- (for example – PV, Analog input, Math block inbuilt)

Hysteresis
- Level and time

Alarm enable
- Enable / Disable individual alarms via a digital signal

Acknowledgement
- Via front panel keys or digital signals

**Math blocks***

Number
- 8

Operators
- +, -, x, /
- Average, Maximum, Minimum
- High / Low / Median select
- Square root
- Multiplexer

**Delay timers***

Number
- 2

Programmable
- Delay
- Duration

**Logic equations***

Number
- 8

Elements
- 15 per equation

Operators
- OR, AND, NOR, NAND, NOT, EXOR

**Custom linearizer***

Number
- 2

Elements
- 20 breakpoints

**Bank control***

Number of outputs
- 6

Wear levelling
- Rotate or FIFO

**Totalizer**

Number **
- Up to 2

Type
- Analog, digital, frequency or pulse

**Statistical calculations**

Average, maximum, minimum (for analog signals)

**Update rate**
- 125 ms

  - Current
  - Resistance (Ω)
  - 3-Wire RTD
  - Thermocouple
  - Digital volt-free
  - Digital 24 V
- Frequency

**Non-universal process inputs**

- Number: 1 standard
- Type:
  - Voltage
  - Current
  - Thermocouple *
  - Digital volt-free
  - Digital 24 V

**Thermocouple types**
B, E, J, K, L, N, R, S, T

**Resistance thermometer**
Pt100

**Other linearizations**
√x, x^1/2, x^3/2, custom linearization

**Digital filter**
Programmable 0 to 60 s

**Display range**
–9999 to 99999

**Update rate**
125 ms

**Common mode noise rejection**
> 120 dB at 50 / 60 Hz with 300 Ω imbalance resistance

**Normal (series) mode noise rejection**
> 60 dB at 50 / 60 Hz

**CJC rejection ratio**

- Stability: 0.05 °C/°C change in ambient temperature
- Temperature stability: 0.02 %/°C or 2 µV/°C (1 µV/°F)

**Long term (input) drift**
< 0.1 % of reading or 10 µV annually

**Input impedance**
> 10 MΩ (mV input)
10 Ω (mA input)

**Outputs**

**Retransmission outputs**

- **Number**: 2 (1 standard, 1 optional)
- **Isolation**: Galvanically isolated from the rest of the circuitry, 500 V for 1 minute
- **Analog range**: 0 to 20 mA programmable
- **Load**: 750 Ω max.
- **Accuracy**: 0.25 % of output or ±10 µA

**Relays**

- **Number**: 4 (1 standard, 3 optional)
- **Type**: Standard with changeover contacts
  - Optional contacts selectable as NO or NC (by jumper)
- **Relay 1 contact rating**: 5 A, 240 V
- **Relay 2, 3 and 4 contact ratings at maximum ambient temperature**: 5 A, 240 V
- **Update rate**: 125 ms

**Digital I/O**

- **Number**: 2 (optional)
- **Type**: User-programmable as input or output
  - Minimum input pulse duration – 125 ms
- **Input**: Volt-free or 24 V DC
  - 1-signal 15 to 30 V
  - 0-signal −3 to 5 V
  - Conforms to IEC 61131-2
- **Output**: Open collector output
  - 30 V, 100 mA max. switched
  - Conforms to IEC 61131-2
- **Update rate**: 125 ms

**2-Wire transmitter power supply**

- **Number**: 1 standard
- **Voltage**: 24 V DC
- **Drive**: 2 loops, 45 mA max.

**Communications**

**Note.** Only one communications option can be fitted per indicator.

**IrDA configuration port (standard)**

- **Baud rate**: Up to 115 kBaud
- **Distance**: Up to 1 m (3 ft)
- **Functions**
  - Firmware upgrade
  - Configuration upload / download

**Ethernet (optional)**

- **Type**: 10BaseT
- **Connector**: RJ 45
- **Protocols**
  - TCP/IP
  - HTTP
  - MODBUS TCP (Slave)

**Web server**

- Built-in – enables remote monitoring using standard web browsers

**Email**

- Can be configured to be sent on the occurrence of a specified event
- Up to 3 recipients
- Up to 4 trigger sources with configurable tag

**MODBUS* RTU (optional)**

- **Baud rate**: Up to 115 kBaud
- **Isolation**: Galvanically isolated from the rest of the circuitry, 500 V DC for 1 minute

**EMC**

**Emissions & immunity**

- Meets requirements of IEC 61326 for an industrial environment

*MODBUS is a registered trademark of the MODBUS-IDA organization*
**…Specification**

**Environmental**
Operating temperature range
0 to 55 °C (32 to 131 °F) *
Operating humidity range
