

ASPECT® & INTEGRA® ProPack Full-Upload/Download CBM Series support

Summary

The Full Upload/Download (FUD) feature in ASPECT (v3.07.00) NEXUS controllers and INTEGRA Propack* is not able to directly support older sites with CBM controllers. All other ABB Cylon controllers are fully supported.

Features

ASPECT and INTEGRA Full Upload/Download backup and restore of controller information is fully supported for all controllers with the exception of the older CBM series; noting that FBXi and CBXi series controllers do support this function for connected CBM controllers.

Customer Impact

FBXi or CBXi controllers with a suitable firmware version are required to support a strategy download to the CBM Series of controllers. For all other MS/TP controllers, ASPECT, INTEGRA ProPack, FBXi and CBXi fully support Full Upload/Download functionality.

* Propack 2.2.9 for INTEGRA versions 4.9 to 4.11 & Propack 2.3.0 for INTEGRA versions 4.12+
