

BUSINESS AREA: MOTION

ABB Traction

Facts & Figures

ABB's Traction division is a leader in traction technologies, driving innovation and energy efficiency in rail and E-mobility. Our propulsion, auxiliary and energy storage solutions contribute to making transportation more sustainable, while saving energy every day. With our products and solutions along the whole lifecycle, ABB is helping OEMs and operators to improve reliability, performance and energy efficiency.

Revenues

<\$1,000 million

Market position

No. 2 globally

Key market drivers and trends

- **Decarbonization and regulations:** Demand for sustainable technologies for trains and buses, integration of energy storage systems in propulsion chains.
- **Energy strategy:** Increasing energy efficiency and thus saving energy plays a key role in rail and bus operators strategy.
- **Service & retrofit:** For operators, mid-life overhaul of electric traction systems provides the opportunity to increase reliability and solve obsolescence issues.

Market

~\$10 billion
