Sensi+, ABB’s innovative ICOS laser technology, answers multitasking issues by accurately monitoring $\text{H}_2\text{S}$, $\text{H}_2\text{O}$ and $\text{CO}_2$ contaminants in natural gas streams in real time. The fast response in seconds allows swift action to manage any threat by redirecting contaminated streams that could compromise safety and operational yield value. Sensi+ eliminates work duplication by managing a single asset and enabling your workforce to generate more value. [abb.com/analytical](http://abb.com/analytical)
