**Managed Ethernet switch 500NMD01**  
EDS500 series - Ethernet & DSL switches

- Integrated managed layer-2-switch  
- 24...60 V DC supply voltage  
- 4x 10/100 BaseT (RJ45, auto-negotiating)  
- 1x SHDSL-port for copper wire  
- Provides redundant topologies by the Spanning Tree Protocol (STP/ RSTP/ MSTP)  
- 1x RS-232/ RS-485 interface suitable for tunneling of serial protocols

**Application**  
The DIN rail mountable 500NMD01 is a managed plug and play layer-2-switch, providing:  
- 4 fast Ethernet auto-negotiating RJ45 ports with auto MDI/X (Automatic Crossover Detection and Correction)  
- one 2-wire SHDSL-port for use with private copper cables  
- 1x RS-232/ RS-485 interface suitable for tunneling of serial protocols

The switch is able to provide redundant topologies by the Spanning Tree Protocol (STP/ RSTP/ MSTP). It supports VLAN frames and tunneling of serial data. Ethernet may be distributed within a station through the 4 RJ45 ports of the switch.

The SHDSL port can be used for interconnecting stations with a maximum distance of 25 km (copper cable with diameter of 0.8 mm). The SHDSL interface can be connected to any EDS500 SHDSL compatible device including 560NMS24 and 560NMS34 and any EFM based SHDSL device.

**Characteristics**  
For documentation purposes, the Ethernet ports are labeled from 1 to 4. There is no specific uplink port. All ports are equal in function. The SHDSL port is connected through a pluggable screw connector. Link and speed status of each Ethernet and the SHDSL port are displayed by status indicators (refer to Connectors and Indicators).

The switch learns Ethernet addresses by analyzing received frames and stores them in a lookup-table.
(max. 2048 entries), which is used to forward frames only to the correct port. If it is broad- or multicast or if the target address is not found in the lookup-table, a received frame is forwarded to all ports except the receiving one. If an entry in the lookup-table is not refreshed by an incoming frame with the specific source address, it is aged out within a maximum of 304 seconds (by default, value is configurable).

Regarding IEEE 802.1Q VLAN frames, the switch can be configured to VLAN or transparent mode. In transparent mode the switch will never change any frame or TAG of a frame; in VLAN mode it can be configured to support several applications like trunk or access ports.

Quality-of-Service is supported by the switch if an IEEE 802.1p compliant frame format is used. The switch can separate frames into up to four queues, which can be configured to priority based or weighted-fair queuing.

The 500NMD01 uses a wide range power supply and works with a voltage from 24 to 60 V.

The component itself, the Ethernet ports as well as the SHDSL connection, the RS-232 interface and the extension bus interface (Ext) are hot-plug capable.

**Topology**

The 500NMD01 provides a total of five ports for use with end devices, switches, bridges, hubs and routers. Star, ring or line topologies can easily be built by this family of switches.

Redundant topologies are automatically detected and handled by the Rapid Spanning Tree Protocol (RSTP) or the Multiple Spanning Tree Protocol (MSTP). This is fully backward compatible with the wide-spread Spanning Tree Protocol (STP).

![Figure 2: Typical topology for use with 500NMD01](image)

**Management and Configuration**

Management and configuration of the 500NMD01 can be done by Telnet, Secure Shell (SSH), SNMP, RS-232 or Web-interface. All methods can be used to either read or write parameters of the device.

Additionally the interface and alarm state of the device can be monitored by IEC 60870-5-101 or -104.

An existing configuration can be saved as well as restored. The configuration can also be stored to an external configuration stick (500NMA01), which supports the simple exchange of a device without trained personnel.

By default, the IP address for the configuration of a 500NMD01 switch is 10.0.0.2 with a subnet mask of 255.0.0.0 and a gateway of 10.0.0.1. Connections for configuration purposes may be accepted through any interface. All Ethernet ports are administratively up in default state.

The preconfiguration for the RS-232 interface is baudrate 57600, 8 databits, no parity, 1 stopbit (57600, 8N1). The command-line interpreter for configuration via this interface can be accessed by any terminal software (e.g. Hyperterminal).

**Ports**

All ports of the device can be disabled or enabled by configuration. Furthermore, the speed and duplex of any port can be set according to its capabilities. This is 10 or 100 Mbps, Full or Half duplex for the Ethernet ports. It is also possible to use an auto-detect setting.

The switch supports multiple additional features, like port mirroring, bandwidth control, or quality of service.

**Alerts, Notifications and Logging**

The 500NMD01 provides Syslog and SNMP capabilities to send alerts and notifications to one or more predefined destinations. There is also a relay for configurable out-of-band alerts.

For each Syslog server entry a severity can be entered to filter outgoing messages.

A system log stores critical messages. The log includes a timestamp either by system uptime, or date and time if a time server is configured.

For Syslog and local logging, a SNTP time server can be used to synchronize clocks and to enable the generation of date and time timestamps instead of uptime referencing messages.

**Redundancy Support**

The redundancy protocols Spanning Tree Protocol (STP), Rapid Spanning Tree Protocol (RSTP) and Multiple Spanning Tree Protocol (MSTP) are fully supported. Without configuration RSTP is enabled for all ports. Switching from RSTP to STP is done automatically to ensure the compatibility to existing STP installations.

For every port, the parameters can be adjusted separately. This includes port priority for root bridge control as well as point-to-point and edge connection settings. A global bridge priority is also settable.

The protocol Ethernet Ring Protection Switching (ERPS) is supported as well.

**Security**

Access to the configuration interfaces of the 500NMD01 is controlled by a two-level password protection. The first level enables the user to access parameters in read-only mode and has to
be entered as soon as a connection is established. To read and write parameters, the device has to be put in a configuration mode that requires an additional password. Any password can be disabled. Some security sensitive information, such as the configuration file, are not available in read-only mode.

Besides the two-level password protection, users may be authenticated by a standard RADIUS server.

Devices can be authenticated via optional IEEE 802.1X support using a central authentication server (RADIUS).

Access control lists provide packet filtering and class-of-service rewriting on a per port basis.
Technical data
In addition to the EDS500 series general technical data, the following applies:

General standards
Safety tested according to
- IEC 60950-1

Environmental conditions tested according to
- ETSI EN 300 019-1-3 class 3.4
- ETSI EN 300 019-2-8 test condition T8.1
- IEC 61850-3
- IEC 60255-21-1 class 2
- IEC 60255-21-2 class 1
- IEC 60721-3-3 class 3M5
- EN 50125-3 class T1 and T2

Electromagnetic compatibility (EMC) tested according to
- IEC 61000-6-1
- IEC 61000-6-2
- IEC 61000-6-3
- IEC 61000-6-4
- ETSI EN 300 386
- EN 50125-3

Environmental conditions - climatic
Nominal operating temperature range
EN 60068-2-1, EN 60068-2-2, EN 60068-2-14
-40 °C... 80 °C

Relative humidity
EN 60068-2-30
5... 95 % (non condensing)

Railway applications
EN 50125-3
climatic class T1 and T2

Environmental conditions - mechanical

## Conducted emissions

- Asymetrical DC ports, common mode (0.15 MHz to 30 MHz)
- EN 55032 / CISPR 32 class A
- IEC 61000-6-4

## Ethernet interfaces (Port1 - Port4)

### Electrical specification

- IEEE 802.3

### Protocol

- Fast Ethernet, Auto negotiation, Auto sense

### Data rate

- 100 Mbps, 10 Mbps or auto

### Duplex

- Full duplex, half duplex or auto

### Transmission / Network termination

- MDI, MDI-X or auto

### Cable

- Shielded CAT5e cable (or better), maximum length: 100m

### Plug type

- RJ-45 (8P8C)

### Circuit classification

- TNV-1 (acc. IEC 60950-1)

### Galvanic isolation

- 1.5 kV isolation voltage

### Overvoltage protection

- Shield to earth ±4 kV

### Electrical fast transient / Burst, IEC 61000-4-4

- 4 kV (level 4), criterion A

### Surge 1.2/50 µs, IEC 61000-4-5

- 4 kV (level 4), criterion A

### Conducted disturbances, induced by radio-frequency fields, IEC 61000-4-6

- 10 V (level 3), criterion A

### Conducted, common mode disturbances in the frequency range 0 Hz to 150 kHz, IEC 61000-4-16

- 30 V continuous disturbance / 300 V short duration disturbance (level 4), criterion A

## Serial interfaces (Con0)

### Electrical specification

- ITU-T V.24, EIA RS-232 or EIA RS-422/485

### Data rate

- 50 bps... 230.4 kbps

### Plug type

- RJ-12 (6P6C)

### Cable

- Shielded, twisted telecommunications cable, up to 25 km with cable diameter 0.8 mm

### Circuit classification

- TNV-1 (acc. IEC 60950-1)

### Auto crossover detection

- Yes

### Galvanic isolation

- 3 kV isolation voltage

### Overvoltage protection

- Shield to earth ±6 kV, line to earth ±6 kV, line-line ±6 kV

### Electrical fast transient / Burst, IEC 61000-4-4

- 4 kV (level 4), criterion A

### Surge 1.2/50 µs, IEC 61000-4-5

- 6 kV line to earth, 6 kV line to line (level x), criterion B

### Surge 10/700 µs, IEC 61000-4-5

- 6 kV line to earth, 6 kV line to line (level x), criterion B

### Conducted disturbances, induced by radio-frequency fields, IEC 61000-4-6

- 10 V (level 3), criterion A

### Conducted, common mode disturbances in the frequency range 0 Hz to 150 kHz, IEC 61000-4-16

- 30 V continuous disturbance / 300 V short duration disturbance (level 4), criterion A

## DSL interface (X3)

### Electrical specification

- ETSI TS 101 524, ITU-T G.991.2, IEEE 802.3-2008 Cl. 63

### Protocol

- ETSI SDSL (ETSI TS 101 524 V 1.2.1)
- ETSI SDSL.bis (ETSI TS 101 524 V 1.2.2)
- ITU-T G.shdsl (ITU-T G.991.2)
- ITU-T G.shdsl.bis (ITU-T G.991.2)
- ITU-T G.hs (ITU-T G.994.1)
- IEEE EFM (IEEE 802.3)

### Data rate

- Up to 15 Mbps

### Plug type

- Phoenix Contact MSTBT 2.5/3-ST

### Cable

- Shielded, twisted telecommunications cable, up to 25 km with cable diameter 0.8 mm

### Circuit classification

- TNV-1 (acc. IEC 60950-1)

### Auto crossover detection

- Yes

### Galvanic isolation

- 3 kV isolation voltage

### Overvoltage protection

- Shield to earth ±6 kV, line to earth ±6 kV, line-line ±6 kV

### Electrical fast transient / Burst, IEC 61000-4-4

- 4 kV (level 4), criterion A

### Surge 1.2/50 µs, IEC 61000-4-5

- 6 kV line to earth, 6 kV line to line (level x), criterion B

### Surge 10/700 µs, IEC 61000-4-5

- 6 kV line to earth, 6 kV line to line (level x), criterion B

### Conducted disturbances, induced by radio-frequency fields, IEC 61000-4-6

- 10 V (level 3), criterion A

### Conducted, common mode disturbances in the frequency range 0 Hz to 150 kHz, IEC 61000-4-16

- 30 V continuous disturbance / 300 V short duration disturbance (level 4), criterion A

## Ext Connector

### Connector

- Proprietary

For usage of the configuration stick 500NMA01 to save the configuration to an external media.

## Alarm output (X2)

### Type of switch

- Toggle (potential free)

### Switching voltage

- 60 VDC / 25 VAC
### Alarm output (X2)
