Current life cycle status
All MEGADRIVE-LCI (PSR) drives with magnetic firing (types PSR1, PSR2 or PSR2 arcnet) are in the Obsolete phase according to the ABB life cycle model outlined above.

Life cycle plan
The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

In the Obsolete phase the product support for MEGADRIVE-LCI drives with magnetic firing is limited to fundamental life cycle services that facilitate lifetime extension by applying Control Upgrade service.

Recommended actions
It is highly recommended to upgrade the drive’s control unit to PEC control platform (refer to Control Upgrade service product description). After this Control Upgrade service the drive installation will return to the Classic phase where complete life cycle services will be available (refer to Life cycle Status Statement of MEGADRIVE-LCI (PSR) after Control Upgrade).

Alternatively the drive can be replaced by MEGADRIVE-LCI (PEC).

Further information
For more information on drives life cycle management and available services contact your local ABB organization or at www.abb.com/drives.
