System pro E control Gemini
Low voltage insulating switchboards

Gemini is the first switchboard 100% recyclable made using a co-injection process which combines lightness and extreme strength, reaching the highest level of mechanical protection against impacts (IK10). This technological solution allows also a high resistance to chemicals and weathering ensuring IP66 protection, excellent performance and continuous operation in any environmental context. Gemini series offers a wide range of accessories and configurations, either with opaque or transparent door, and six internal sizes from 24 to 216 DIN modules.
