Stop Sale 400T, 500T and T5 Series Pressure Transmitters

Effective May 28, 1999 the entire 400T, 500T and T5 analog transmitter product line, which currently is on Limited Availability status, will be placed into Stop Sale status. Remove all pages T-133 through T-242 from the Transmitter section of your Rochester NY Price & Specification book.

400T, 500T and T5 is replaced with 600T Series Smart Pressure Transmitters. Please convert any orders for this series to the 600T series. As most of you know, the 600T series is priced lower than 500T. The low cost 400T should be replaced by the low cost 624T model.

Some customers have concerns switching from analog to smart technology, especially the need for a hand terminal to maintain the unit. Remember, the 600T series has zero and span adjustments (called *SnapCal*) on the transmitter housing so a hand terminal is not necessary.

400T, 500T and T5 service repairs will continue as usual. Naturally, the warranty will be honored for the duration of the warranty period. When necessary, repairs will be by replacement with a 600T model. The customer will be informed of the substitution prior to approval to proceed with the repair.

Please call me if you have any questions: 716-273-6264.
