Preventive Maintenance
Increase drive reliability to cut operating costs

Installed drives are maintained according to planned schedules, thereby controlling maintenance costs and optimizing lifetime performance.

**In-depth knowledge**
Annual inspections and component replacements are carried out by highly trained engineers in accordance with detailed, product specific maintenance schedules.

**Optimized availability**
Drive availability is optimized and the risk of unexpected shutdowns minimized by performing preventive maintenance actions in a timely and professional manner.

**Controlled costs**
Planned preventive maintenance actions allow maintenance costs to be controlled and unexpected losses to be avoided.

**Environmental safety**
Maintenance using original ABB Preventive Maintenance kits is carried out following all safety and environment requirements, creating consistently flawless, safe drive and process operation.

Check the service availability for your drive types with your local ABB representative.

Preventive Maintenance
Service delivery

Maintenance assessment
Data based on the serial numbers of installed drives is collected and upcoming product specific preventive maintenance actions are recommended for selected drives.

Service execution planning
The service is agreed, resourced and scheduled to match with your maintenance shutdown plans.

Kit delivery
The correct Preventive Maintenance kits are delivered by ABB or by third-party channel companies.

Service implementation
A Local ABB-certified engineer carries out all scheduled maintenance tasks on-site – including functional drive testing when possible.

Reporting
ABB generates and delivers detailed maintenance report. ABB also registers all previously unregistered drives.
