

Electronic timer CT-YDE

Star-delta change-over with 1 c/o (SPDT) contact

The CT-YDE is an electronic time relay with star-delta change-over. It is from the CT-E range. The CT-E range is the economic range of ABB's time relays and offers a cost effective price-performance ratio for OEM users. This is achieved by simplified functionality and results in the simplest of setup procedures. The CT-E range is ideally suited for repeat applications.

Functions

Operating controls

1 Indication of operational states

U: green LED – Control supply voltage applied

R: red LED – Output relay energized

2 Thumbwheel for the fine adjustment of the starting time

Application

Their conception makes the CT-E range timers ideal for repeat applications.

Operating mode

The fine adjustment of the time delay is made via the front-face thumbwheel.

Examples of application

Star-delta change-over, power circuit diagram

Function diagram

Star-delta change-over (Star-delta starting)

Applying control supply voltage energizes the star contactor (K1) and the line contactor (K2) and begins the set starting time. When the starting time is complete, contact 15-16 de-energizes the star contactor (K1). Now, the fix transition time starts. When the transition time is complete, contact 15-16 energizes the delta contactor (K3).
