Superstrut[®] SilverGalv[®] electro-galvanized finish

Performance unmatched by the competition

Superstrut® SilverGalv® outperforms the competition

The Superstrut SilverGalv finish provides continued safety within OSHA guidelines and a level of performance unmatched by the competition.

- No more white rust — With pre-galvanized struts, a common quality issue is the formation of white rust on the zinc finish. With SilverGalv, the clear chromate finish is applied over the zinc to seal it and stop the formation of white rust.
- Strong abrasion resistance — The SilverGalv finish won't chip or peel like a green painted strut product. It stands up to rough handling.
- Superior corrosion protection — One hallmark of the SilverGalv finish is the superior corrosion protection it provides. In the ASTM B117 salt spray test, the SilverGalv finish provided improved protection as compared to painted finishes or G90 pre-galvanized. This outstanding corrosion protection means more versatile installations and more service life for SilverGalv finished products.
- Punched holes and cut ends are protected — Unlike a pre-galvanized finish where bare steel holes and cuts have no corrosion protection, SilverGalv protects every portion of the strut. Because the SilverGalv finish is applied after fabrication, all punched holes and cut ends share a consistent quality with the rest of the material. Even after cutting or fabricating, SilverGalv will continue to protect with its sacrificial zinc process.
- Paintable surface — The SilverGalv finish provides a non-porous and non-crystalline surface. Not only does this feature provide enhanced corrosion protection, but also provides an excellent bond for the paint of your choice.
- Clean finish — SilverGalv ensures a finished product that leaves no residue on your hands. In the SilverGalv process, a zinc finish is applied after fabrication. As a result, all of the oil and grime that accumulates during manufacturing gets thoroughly cleaned off during the plating process.

Complete offering of SilverGalv fittings and accessories

Mismatched strut assemblies are a thing of the past with Superstrut SilverGalv. With a complete line of channel, hardware, fittings, hangers and pipe straps, all components have the same electrogalvanized finish for consistent performance and uniform aesthetics.

SilverGalv straps and hangers

SilverGalv fittings

SilverGalv channel

SilverGalv hardware

Metal framing channel finish

Corrosion-resistant testing, ASTM B117
