

Certified Repair Center in Malmö, Sweden

Repair Services

With more than four decades of experience, ABB Repair Center Malmö offers you a wide range of after market services for printed circuit boards, as part of ABB Logistics Center, Sweden.

These services are offered in the same efficient manner as the traditional spare part services that we are renowned for. Besides repairs at fixed repair prices, we also have a complete range of other after market repair services. A detailed repair report is included in every repair shipment that leaves our workshop.

Repair Process

As an ABB Certified Repair Center, we have an established repair and troubleshooting process. We start with a visual inspection, cleaning, and then a detailed inspection including diagnostic measurements, followed by the actual repair work and ending with functional tests.

Repair Lead Time

For the majority of printed circuit boards, we are able to promise a repair lead time of seven calendar days, from the moment we receive the unit until it is returned to you. To facilitate repairs, please make sure to include a detailed fault description.

In every repair shipment that leaves our workshop, we include a repair report, detailing the faults found and the corrective actions taken. All shipments are marked with our factory seal which certifies that they have been repaired by the ABB Certified Repair Center in Malmö, Sweden.

Upgrade

Repaired boards are automatically upgraded to the latest version according to the instructions of the product management, unless otherwise instructed by the customer.

Emergency Repair Service

The Emergency Repair Service is the right choice for a printed circuit board or a unit that must be repaired in the shortest possible time. The defective item is repaired, tested and returned within one to three working days. Please ask for a quotation! Please inform your contact person about your Emergency Repair order before sending the item to us, so that we can reserve the necessary resources for the repair work.

Advanced Maintenance Repair

It is also possible to combine the repairs with an "Advanced Maintenance Repair", a preventive maintenance service where the units are reconditioned by replacing individual components that have a limited life span, such as capacitors, relays etc.

Warranty

The warranty period for repairs is twelve (12) months on the repaired components from the date of the invoice.

Extension of the warranty period can be negotiated and quoted upon request.
