PSR Cycloconverters, types CYCLO and SCYC

1. CURRENT LIFECYCLE STATUS

The PSR Cycloconverter product is in the Classic Phase according to the lifecycle plan. It is planned to remain in this phase till the end of year 2011.

2. SUPPORT AVAILABILITY

During the classic phase the product will be fully supported and maintained by ABB regardless of which manufacturing unit delivered the product.

During this phase ABB will also offer a full set of services for the product, including, but not limited to:

- spare parts and repair services (new and refurbished parts and electronics repair)
- training services
- technical support and on-site support services
- preventive maintenance services to minimize effects of aging of components and to maximize reliability

Re-manufacturing and overhaul capabilities will also exist, providing opportunities to purchase complete modules for expansion projects or for spare part purposes.

3. LIFECYCLE PLAN

The PSR Cycloconverter product is planned to be transferred to the limited phase beginning of 2012. In this lifecycle phase ABB does not guarantee availability of all the services anymore and hence recommends that PSR cycloconverter end-users initiate a migration planning to new ABB drive technology. The product is planned to be transferred into the obsolete phase beginning of 2017. In the obsolete phase the product support is contingent to component availability and spare part deliveries are limited to the existing stock.

4. FURTHER INFORMATION

For more information on the available Drives services, please see <http://www.abb.com/drivesservices/> and/or contact your local ABB organisation.

For further information on the life cycle model and available services, please contact ABB Switzerland Ltd, Medium Voltage Drives by E-mail: mvac.supportline@ch.abb.com.
