Effective environmental permit management is essential for all operators.

Environmental Permitting Regulations (EPR) / Pollution Prevention and Control (PPC) permits have been issued to sites considered by the Environmental Agency (EA) and the Scottish Environmental Protection Agency (SEPA) to have environmental impacts requiring tight environmental control.

What we offer
We provide a series of practical tools and services to help manage permitting requirements and maintain continual improvement.

Helping deliver permit requirements
We’ll prepare a sustainable EPR / PPC permit compliance plan and develop infrastructure to deliver requirements through:

- Permit needs analysis and delivery plan generation
- Establishing a workable delivery infrastructure
- Delivery of improvement condition items
- Delivery of periodic compliance
- Delivery of environmental improvement projects
- Performing independent health checks / compliance audits to ensure that permit obligations are being delivered effectively

Helping deliver generic permit condition requirements
A number of the initial requirements of the permit are generic in nature and can be tackled early on in the delivery plan. We can help with a number of issues including:

- Civil asset integrity studies, e.g. drains, bunds, surfacing, etc.
- Process / manufacturing Best Available Technique(s) (BAT) studies justifying operations
- Impact assessments
- Monitoring Certification Scheme (MCERTS) plan
- Risk assessment / accident management planning
- Site Protection and Monitoring Programme (SPMP) design and implementation site closure plans
- Awareness training
- Guidance on up-coming environmental legislative issues

Permit management cycle
The diverse nature of environmental permitting requires a clear approach to the management and delivery of the permit’s requirements. These requirements will change with time and need to adapt to the dynamic nature of site operations.
Benefits
- Compliance with environmental permitting conditions
- Painless permit management
- Delivering continuous improvement
- Independent assessment of reasonable regulation
- Advanced warning of upcoming legislative changes which may have significant impact on site operations

Why ABB?
ABB have a long track record of preparing sustainable Environmental Permitting Regulations (EPR) / Pollution Prevention & Control (PPC) permit compliance plans and of developing site infrastructure protection and monitoring in both the process and manufacturing industries.

Our experienced consultants possess in-depth understanding of regulations and how to achieve compliance.

Our engineers and consultants have operational backgrounds and make pragmatic technical judgements based on their experience. It’s an approach that ensures cost-effective, practical-to-implement solutions which work.

We’re also able to call on a broad range technical knowledge from across our services.
