Notification

Product Group: HF Alkylir

Dear Customers,

ABB’s internal quality assurance has determined that the RTD assembly mounted on the sample cell cabinet does not measure the temperature inside the cabinet accurately during extreme outdoor temperatures. This is due to the thermowell used to cover the RTD element. This part is not needed for this application and should be removed. Removing the part will not affect the certification of the unit. Refer to the picture below to see how the RTD assembly should be mounted after removing the thermowell.

If you have any question or need assistance, please contact ABB Bomem Inc. Service Department.

Sincerely,

ABB Bomem Inc.
