NOTES:
1. WARNING: This drawing does not illustrate completely the installation methods required for hazardous locations. Prior to any installation in a Classified Hazardous Location, verify installation methods by the Control Drawing referenced on the product’s name tag and national and local codes.
2. CAUTION:
   Only activate ONE (1) DO at a time on J4. That is the normal condition for Valve Control.
3. Assume Full Open is Full Clockwise
   Assume Full Closed is Full Counter Clockwise
4. The 1st valve control module is address ‘0’, 2nd module is address ‘1’, etc.
5. ‘Local Lockout’ activated by closed contact.
6. LED Indicators:
   Run LED – Blinking indicates onboard PIC running.
   Activity LED – Blinking indicates bus activity.
   Mode LED – 00 = Normal 01 = Reset
7. LED Operation:
   Register 0.7.7 = 0 – Power Save Mode (LEDs off when MMI disconnected)
   Register 0.7.7 = 1 – LEDs on all the time.

Valvcon Q6.2.1 Actuator Term Bd

Selector Switch factory default address is set at 0. If another COMBO IO/VC TFIQ is added, move that Dip Switch setting to 1. If more are added, use the next address in line for each.

Changing the address applies only to TFIQs of their own type, and not TFIQs of another type: those would also start at 0 and add new address of their own.

TIP: While 0 is recommended for the first one, any address can be used (But keep in mind the original config files in our software are built with this address and factory tests will look for it).
