Important information for the installer of this Nexus emergency light fitting

Early versions of Nexus software will not properly identify LED fittings. This is a result of the evolution of the system firmware, essential to keeping pace with advances in technology.

Version 4.2.2 and higher software resolves identification of the LED fittings and also offers significant improvements in functionality over earlier software versions.

For software patches, version information and other details, refer to www.stanilite.com.au and click on ‘Links and Downloads’ then ‘Nexus Software and Patch’.

Please contact a Nexus technical specialist at ABB service department on 1800 60 20 20.
