

SM2000

Advanced videographic recorder

Raising the standards of data storage

Bright and clear display

- high contrast, thin film transistor (TFT) color screen

Secure data recording

- 8 Mb internal Flash memory for 12 recording channels and logs
- no battery back-up required

21 CFR Part II compliant data security

- extensive physical and electronic security features

Robust and convenient archive storage

- low cost, high reliability, Compact Flash option
- high capacity

Intuitive user interface

- dedicated operator keys and touchscreen configuration

Unsurpassed environmental protection

- hosedown to IP66 and NEMA4X standards

Flexibility to meet your application needs

- 6 or 12 universal inputs, I/O modules, math and communications

10BaseT Ethernet communications

- remote monitoring/access
- email notification of alarms and status reports

GAMP validation package

- 21 CFR part 11 compliant

SM2000

Advanced videographic recorder

SM2000

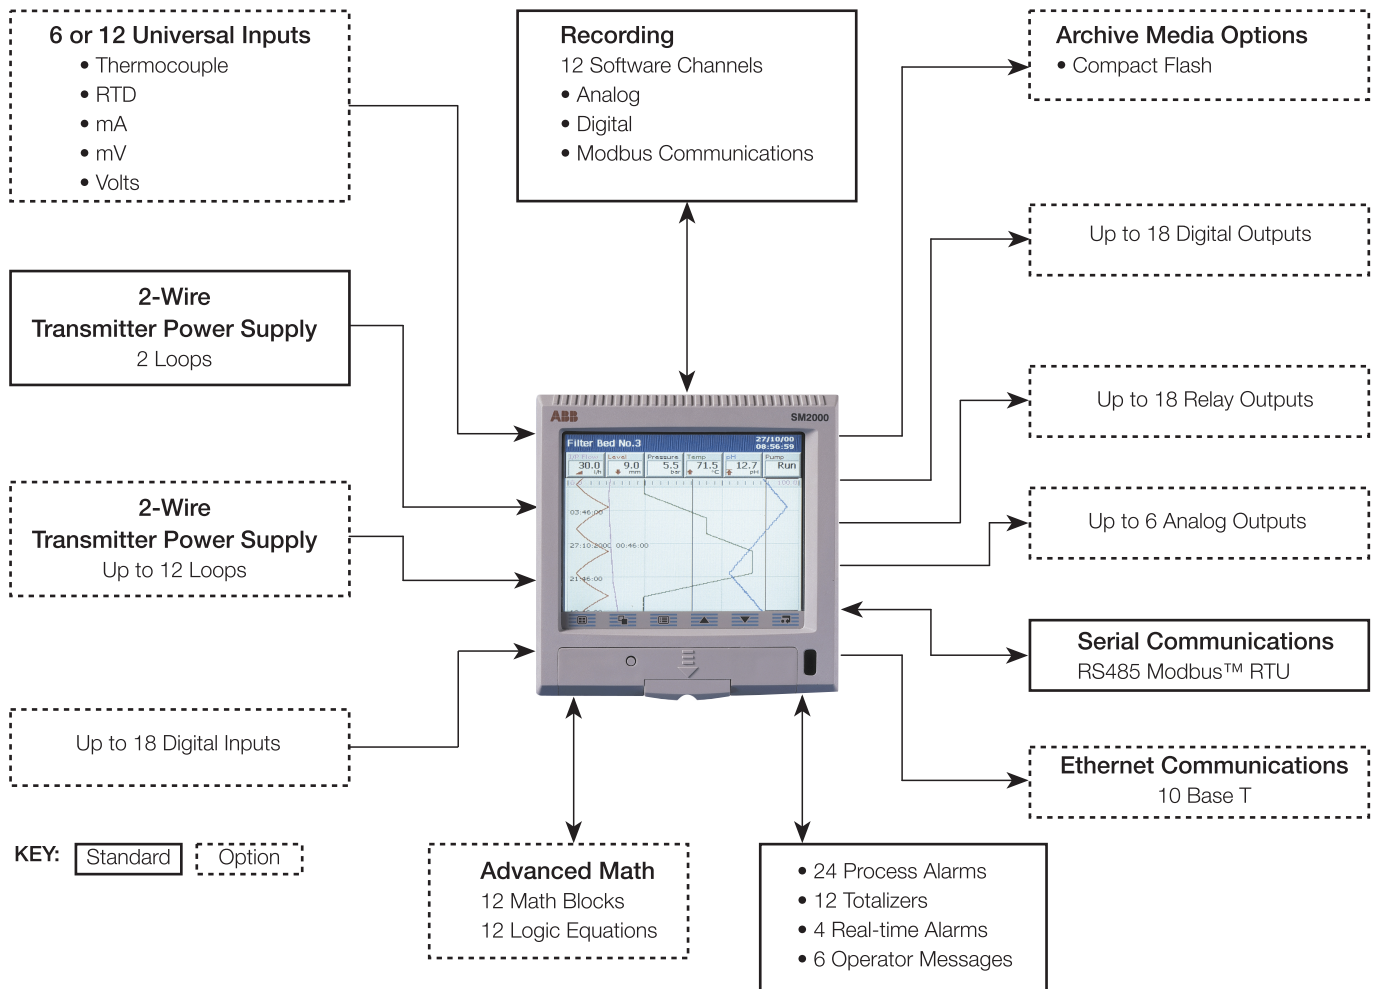

The SM2000 is a state-of-the-art solution to recording and data storage. It provides 12 recording channels and up to 12 universal analog inputs which can be viewed in a variety of display formats: chart, bargraph, digital indicator and process summary. Historical logs are provided for recording alarms, operator and system events and totalizer values

A high quality, 14 cm (5.7 in.), TFT display and analog, resistive touchscreen provide a clear and intuitive user interface.

The SM2000 has an onboard Flash memory capacity of 8 Mb providing storage of up to 2.9 million samples. Process data can also be logged to a Compact Flash card, then transferred to a PC for storage and analysis.

Application areas include:

- Water treatment plants
- Cold storage
- Stack gas monitoring
- Environmental monitoring
- Autoclaves
- Food, Dairy and Beverage processing
- Furnaces
- Heat treatment
- Pulp & Paper
- Life sciences

Guaranteed Data Integrity

- The use of Flash memory technology ensures that the SM2000 is not reliant on batteries to preserve stored data during a power failure.
- In the internal memory, data is stored in small blocks with each block containing a checksum to ensure the integrity of that data.
- An enhanced error detection/correction code is built-in to the internal Flash memory, ensuring safe storage of your process data.
- 8 Mb of internal Flash memory is provided for buffering of data. The complete 8 Mb of data can be reviewed on the display of the SM2000. Once this memory is full it automatically wraps-around and overwrites the oldest data, ensuring that the latest process data is always captured.
- 12 recording channels are provided as standard which can be used to record any analog, digital or communications (via Modbus) signal. Each channel can be recorded at their own primary or secondary sample rate. This allows detailed information to be stored under specific process conditions e.g. critical process states or alarm conditions. Alternatively, for simple applications one sample rate can be applied to all channels. Through the use of pre-storage filters it is possible to record the average, max./min. or instantaneous value of any analog data.

Industrial Standard, Robust, Archive Storage

- Compact Flash memory card options can be fitted to the SM2000 for archiving purposes. Process data can be archived to the removable media in either of two configurable formats: comma-separated variable or binary encoded. In addition to the analog/digital recording channels, the alarm event, totalizer (if fitted) and audit logs can also be archived to the removable media.
- The solid-state nature of Compact Flash cards ensures that the SM2000 can truly operate in ambient temperatures up to 50 °C (122 °F) whereas traditional electro-mechanical floppy disk drives can operate only in temperatures up to 40 °C (104 °F).
- Every write to the archive storage media is verified to ensure the integrity of the data.
- Security of all process data stored to the memory card is always assured. Files stored in comma-separated variable format are attributed with an Encrypted Digital Signature and files stored in binary format are encoded securely with inbuilt integrity checks. Both formats of data storage are compliant with FDA standard 21 CFR Part II.

Security

- A Media door lock is fitted as standard to prevent unauthorized access to the removable media.
- Two security modes are available. In the first, a tamper-proof seal can be fitted to the front of the instrument to meet the requirements of regulatory bodies. In this mode, the configuration of the recorder can be altered only by first changing the position of an internal switch. To accomplish this the unit needs to be removed from its case, breaking the seal. In the second mode, the configuration can be protected by the use of four, individual, user-specific passwords.

SM2000

Advanced videographic recorder

21 CFR part 11 Compliance and GAMP Validation Package

With its comprehensive audit trail, secure archiving format and extensive physical and configuration security features, the SM2000 is ideally suited to applications where compliance to 21CFR part 11 (the FDA's regulations regarding electronic record keeping) is required (for further information refer to [INF02/70](#)).

In keeping with this, a template for validating the SM2000 videographic recorder is available. Following GAMP 5 (a risk-based approach to compliant GxP computerized systems), the template is designed to make the validation process as simple as possible and provides an IQ and OQ that is completed at the customer site, before and after installation. Once completed, the template is then packaged together with other documentation relating to the system as a whole, ready to be presented to the governing regulatory body for inspection.

Low Cost of Ownership

The large capacity of the storage media used on the SM2000 ensures that the requirement for operator intervention to transfer the data to a PC on a regular basis is greatly reduced. Older floppy disk technology, used by many other manufacturers of graphical recorders, limits storage capability significantly, sometimes to levels below the ability of a traditional paper recorder.

See below for an example of how memory storage times vary depending on the media device. The example shows the recording duration for a 6-channel recorder with a sample time of 10 s. Also included in the example is how these storage times compare with a traditional paper recorder.

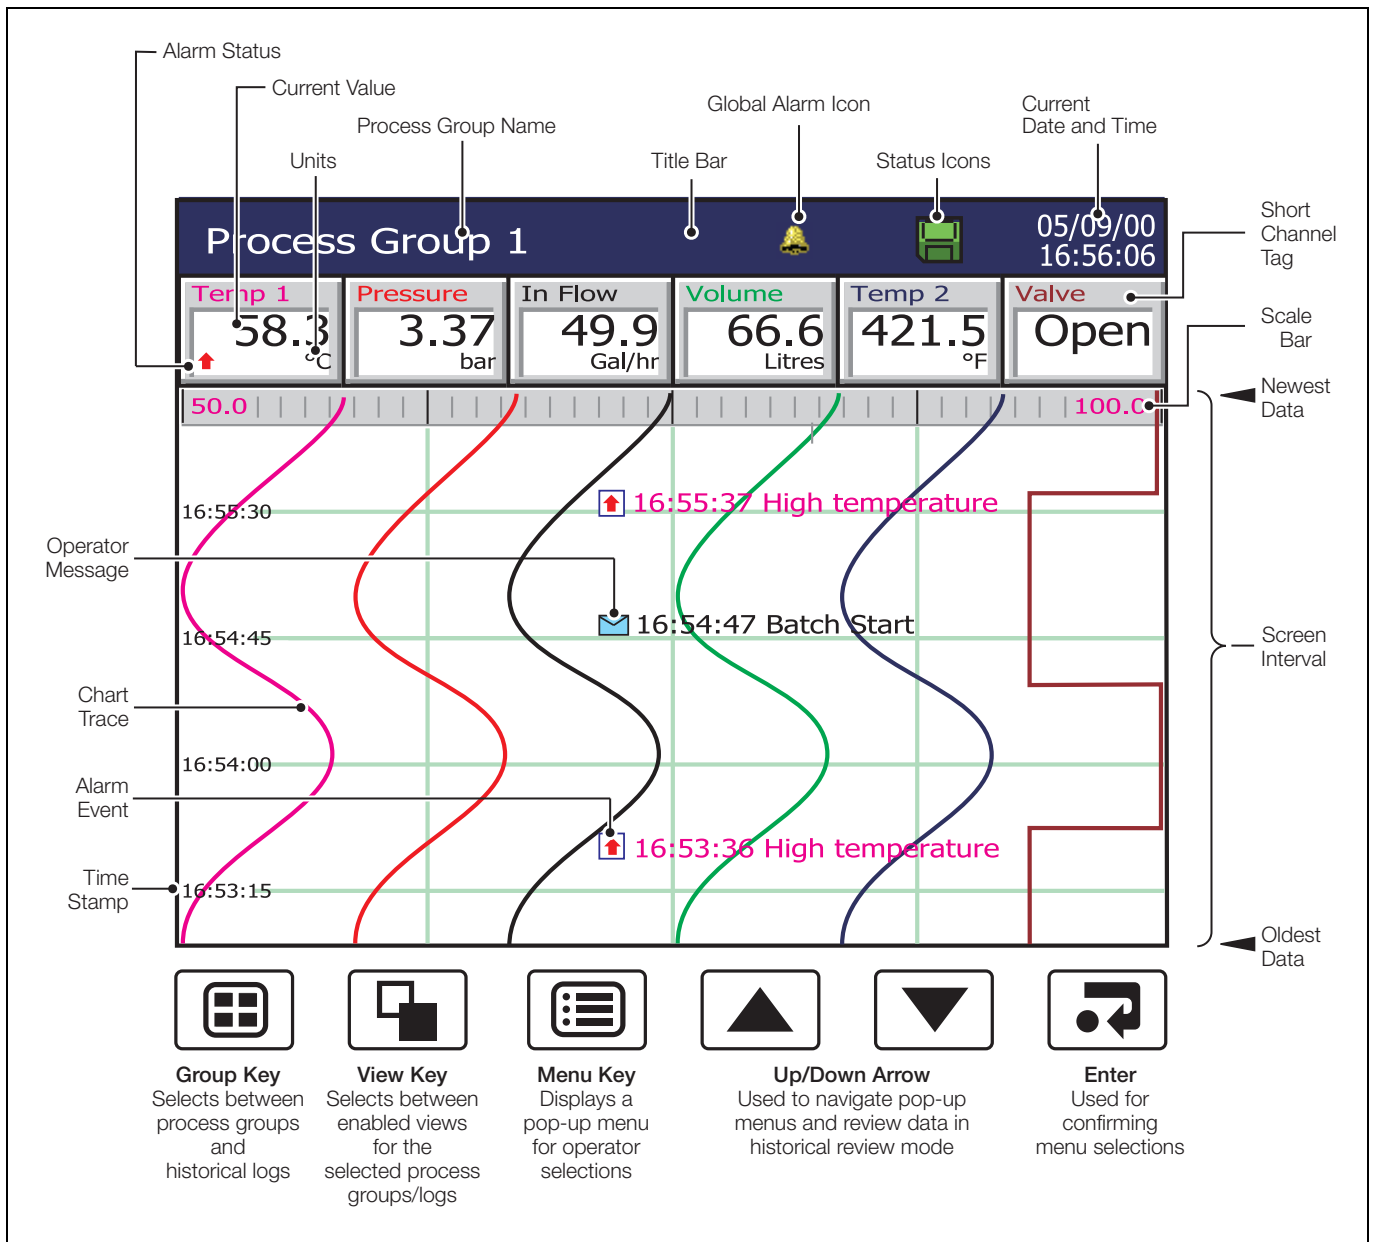

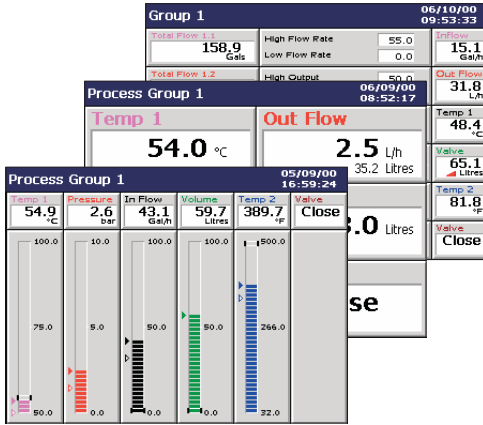

Unsurpassed Environmental Protection

Unique to this type of product, the SM2000 has unrivalled protection ratings of IP66 and NEMA4X and includes a fully-sealed, lockable media door. This enables the SM2000 to be installed, without additional protection, in applications that require frequent hosedown. With industrial standard noise emission and immunity protection, the SM2000 operates effectively in high electrical-noise environments.

Intuitive User Interface

Operator Views

In addition to the standard chart view, a number of other operator views are available:

- **Process View**

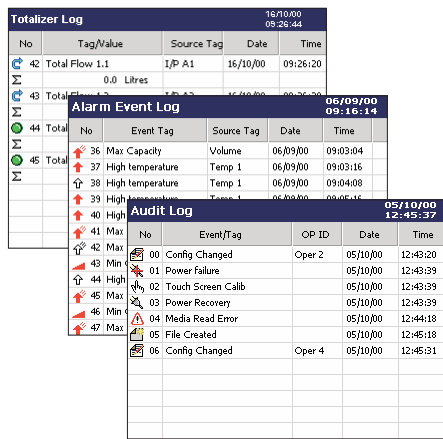

Provides an at-a-glance summary of each channel including alarm, totalizer and statistical (max./min.) information.

- **Digital Indicator View**

Process value, engineering units, channel tag, associated totalizer (if applicable), and alarm status are all shown. Auto-sizing always ensures the clearest possible display.

- **Bargraph View**

Horizontal or vertical format which includes min./max. and alarm trip point markers.

Historical Logs

Providing functions unavailable in paper-based recorders, three historical logs ensure complete validity of the recorder and its data. Any or all of these logs can be exported to the removable media:

- **Totalizer Log**

Independent log intervals for each channel, enabling total, average, maximum and minimum readings to be time and date stamped.

- **Alarm Event Log**

Complete display of all acknowledged and unacknowledged alarms, alarm state changes and operator messages.

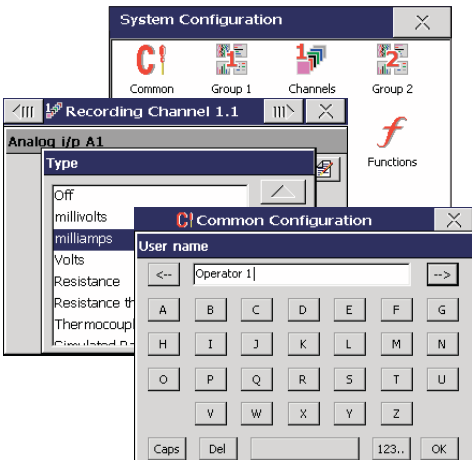

- **Audit Log**

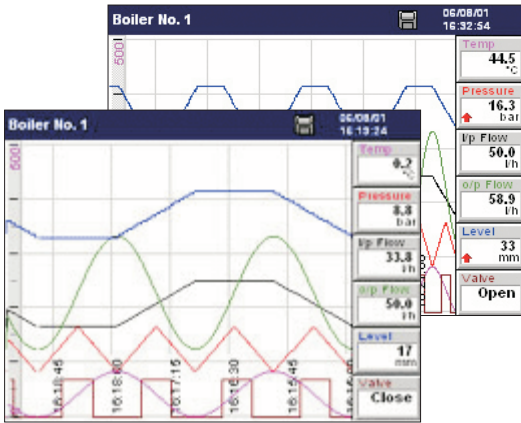

Displays time, date and ID stamped system data including configuration, calibration changes, system errors and operation actions. This provides comprehensive evidence of the integrity, validity and traceability of the SM2000 and its measured data.

Configuration

During configuration mode the touchscreen of the SM2000 comes into operation. A simple Microsoft® Windows-style structure provides an intuitive approach to the setup of the recorder. Numerical and text values are quickly entered via the on-screen keyboard.

It is also possible to configure the SM2000 with a Windows-based PC configuration package.

On-line Data Review

The SM2000 provides a number of unique features to provide a clear view of your process

- The screen interval can be altered to display between 18 s and 7 days of information, without it affecting the sample rate. This gives you the ability to 'zoom in' to a close-up view of the most current data or 'zoom out' to get the big picture.
- Individual traces can be temporarily removed from the screen to enable clear comparison of two or more trends.
- The SM2000 can easily review all historical data in the 8 Mb internal buffer memory at the touch of a button. During this time, recording of the process data to the internal memory remains unaffected.

Off-Line Review and Analysis

Using ABB's DataManager Pro software, archived process data and historical logs recorded to a removable media card can be reviewed easily.

- Database management of data files provided by DataManager Pro ensures simple, secure long-term storage and retrieval of historical data.
- The graphing capabilities provided by DataManager Pro ensure easy interrogation of process data.
- The validity of all data files is always checked by DataManager Pro during the storage and retrieval process, ensuring maximum data integrity.

For further information on the capabilities of DataManager, Pro refer to data sheet DS/RDM500-EN.

Math and Logic

Available as an option are advanced math and logic capabilities. 12 multi-element math and 12 multi-element logic equations can be configured. Equations can be nested into each other to provide extensive capabilities.

- Mean, standard deviation and rolling averaging functions are provided.
- Standard addition, subtraction, multiplication and division are complemented with Log, Ln, Square root, power, Sin, Cos, Tan and absolute functions.
- Switching of process signals can be achieved via the high/low/mid signal selection and multiplexing functions.
- Predefined equations are provided for relative humidity and F0 calculations.
- AND, NAND, OR, NOR, XOR and NOT operators are available within the logic equations.

All math and logic equation results can be recorded on the display of the recorder and archived to the removable media. Detailed diagnostic functions are provided for both the math and logic equations.

Batch Recording

A batch recording option enables simple recording and reviewing of batch processes. When a batch is started it is tagged with a unique batch number, operator identification and three user-definable description fields. All information is entered on-screen with a history function allowing quick entry of commonly repeated descriptions.

Using DataManager Pro software batches can be simply and quickly traced for review using the unique batch number and description information entered at the time of recording. Additional functionality provides the ability to search and sort batch records for an entire production facility in many ways, including by product type, operator and time and date of processing.

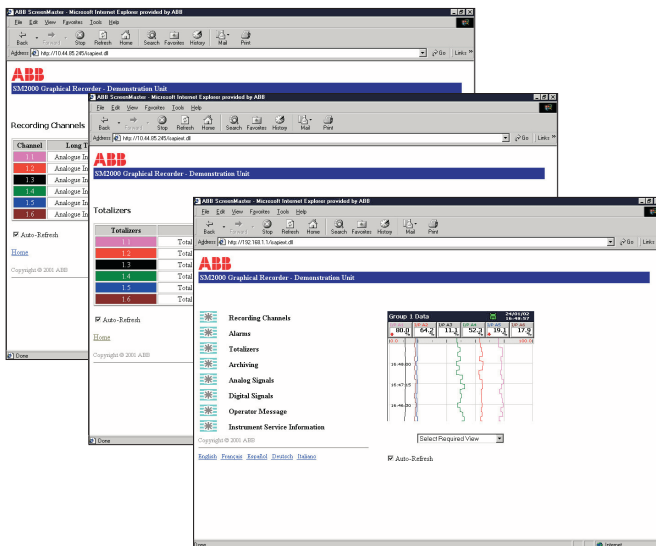

Ethernet Communications

The SM2000 can provide 10BaseT Ethernet communications via a standard RJ45 connector and uses industry-standard protocols TCP/IP, FTP and HTTP. The use of standard protocols enable easy connection into existing PC networks.

Data File Access via FTP (File Transfer Protocol)

The SM2000 features FTP server functionality. This functionality provides high-speed access via Ethernet to data archived by the recorder.

- Using a standard web-browser or other FTP clients, data files contained within the SM2000's internal memory and memory card can be accessed remotely and transferred to a PC or network drive.
- Four individual FTP users can be programmed into the SM2000. Access rights can be configured for each user specifying their access level.
- All FTP log-on activity is recorded in the audit log of the SM2000.
- Using ABB's data file transfer scheduler program, data files from multiple recorders can be automatically backed-up to a PC or network drive for long term storage ensuring the security of valuable process data and minimizing the operator intervention required.

Embedded Web Server

Contained within the SM2000 is an embedded web-server allowing access to web pages created within the recorder. The use of HTTP (Hyper Text Transfer Protocol) enables standard web browsers to view these pages.

- Detailed with the web pages is the current display of the recorder, detailed information on process signals, alarm conditions, totalizer values and other key process information.
- The historical logs stored in the SM2000's internal buffer memory can be displayed in full from within the web pages.
- Operator messages can be entered via the web server enabling comments to be logged to the recorder.
- All of the information displayed on the web pages is regularly refreshed enabling them to be used as a process supervision tool.

On-line Demonstration

A demonstration of these features is available from an on-line recorder accessible via the internet. In the address bar of your web browser enter 'http://217.46.239.73'.

Remote Access/Monitoring

Ethernet communications can provide a link to recorders installed in remote locations. Via the use of a dial-up router an SM2000 can be installed in a remote location and accessed via a public telephone network when required.

Email Notification

Using its inbuilt SMTP client the SM2000 is able to email notification of important events. Emails triggered from process alarms or other critical process events can be sent to multiple recipients. The recorder can also be programmed to email reports of the current status at specific times during the day. Status report content can be tailored to suit your specific process needs.

SM2000

Advanced videographic recorder

Specification

Operation and Configuration

Configuration

Via analog resistive touchscreen on front panel or PC Configuration
Multiple configuration files can be stored in internal (up to 16 files) or external memory (with removable media option fitted)

Configuration ports

3.5 mm jack socket for connection to RS232 port on a PC via an adapter

Display

Thin film transistor (TFT), active-matrix, color, liquid crystal display (LCD) with built-in backlight

Low-reflective, 14 cm (5.7 in.) diagonal display area, 76800 pixel display*

Viewing angle — Horizontal 45 ° typ. (left side, right side)
Vertical 30 ° from below, 15 ° from above

***Note.** A small percentage of the display pixels may be either constantly active or inactive. Max. percentage of inoperative pixels < 0.01 %

Screensaver

Can be programmed to dim the backlight if operator keys are not pressed for a selected period of time

Languages

English, German, French, Italian and Spanish

Dedicated operator keys

- Group select
- View select
- Menu key
- Up/Increment key
- Down/Decrement key
- Enter key

Chart screen intervals

Selectable from 18 s to 7 days

Chart scales

Independent primary and secondary ranges for each channel

Chart divisions

Programmable for up to 10 major and 10 minor divisions

Chart annotation

Alarm and operator messages may be annotated on the chart
Icons to identify the type of event, time of occurrence and tag are displayed

Operator Views

Contents	Views Available

SM2000

Advanced videographic recorder

Security

Physical

Standard door lock

Configuration security

Password protection Access to configuration is allowed only after the user has entered a password

Internal switch protection Access to configuration is allowed only after a hardware switch has been set. This switch is situated behind a tamper-evident seal

Logging security

Configuration Can be configured for password protection or free access to logging levels

Basic type security

4 individual users with unique username and passwords

Advanced type security

Number of users	Up to 12
Usernames	Up to 20 characters, Usernames are unique, i.e. names cannot be repeated
Access privileges	Logging access — Yes/No Configuration access — None/load file only/limited/full
Passwords	Up to 20 characters A minimum required password length of 4 to 20 characters can be configured and a password expiry time can be applied to eliminate password ageing
Password failure limit	Configurable for 1 to 10 consecutive occasions or 'infinite' A user is deactivated if a wrong password is entered repeatedly
Deactivation of inactive users	Can be disabled or configured for 7, 14, 30, 60, 90, 180 or 360 days of inactivity Users are deactivated (by removal of access privileges) after a period of inactivity

Standard Functionality

Operator Messages

Number

24 configurable messages of up to 20 characters each

1 operator defined message of up to 20 characters

Trigger

Via front panel or digital signals

Recording in alarm/event log

Can be enabled or disabled on configuration

Process Alarms

Number

24 (2 per recording channel)

Types

High/low: process, latch & annunciator

Rate: fast/slow

Tag

20-characters tag for each alarm

Hysteresis

Programmable value and time hysteresis – 1 to 9999 s

Alarm enable

Allows alarm to be enabled/disabled via a digital input

Alarm log enable

Recording of alarm state changes in the alarm/event log can be enabled/disabled for each alarm

Acknowledgement

Via front panel or digital signals

Update rate

300 ms

Real-time Alarms

Number

4

Programmable

Day of the week, 1st of month, start and duration times

Totalizer

Number

12 (1 per recording channel) 10-digit totals

Type

Analog or digital, batch and secure totals

Statistical calculations

Average, maximum, minimum (for analog signals)

Update rate

300 ms.

Custom Linearization

Number

2

Number of breakpoints

20 per linearizer

SM2000

Advanced videographic recorder

Recording – to Internal Memory

Data Channels

Internal buffer memory

8 Mb Flash memory provides storage for 2.9 million samples

Oldest data is automatically overwritten by new data when memory is full

Data integrity checks

Checksum for each block of data samples

48-bit code for error detection/correction built-in

Independent process groups

2

No. of recording channels

12 (6 per group)

Sources

Analog inputs, Modbus input, any digital signal

Filters

Programmable for each channel to allow recording of: instantaneous values, average, max., min. and max. & min. value over sample time

Primary/secondary sample rates

Programmable from 0.1 s to 12 hours for each recording channel

Primary/secondary sample rate selection

Via any digital signal or from password protected menu

Recording start/stop control

Via any digital signal or from password protected menu

Recording Duration

Approximate duration calculated for continuous recording of 6 channels of analog data (for 12 channels divide by 2, for 3 channels multiply by 2 etc.).

Sample Rate	1 s	10 s	40 s	60 s	120 s	480 s
8 Mb Internal Flash buffer memory	5 days	55 days	7 months	11 months	22 months	7 years

Recorded data for group 1 & 2 channels

Alarm event log for group 1 & 2 alarms/events

Totalizer log for group 1 & 2 totals

Audit log

Configuration

File Structure

Configurable as either binary encoded or comma-separated

File name

20-character tag, prefixed with date/time according to the new file generation interval selected

Data verification

Carried out automatically on all writes to removable-media files

	Binary	Comma-separated
File protection	Secure binary format with data integrity checks	Encrypted digital signature
New file generation interval	Automatic	Programmable for automatic file generation every hour, day or month
Archive sample rates	Programmable from 0.1 s to 12 hours for each process group*	Programmable from 1 s to 12 hours for each process group

* For sample rates faster than 1 s the performance of the analog input card must be considered. For further information refer to page 14 of this data sheet. Further information is also available from you local ABB representative.

Card compatibility

ABB recorders comply with approved industry standards for memory cards and ABB has fully tested and recommend the use of SanDisk Standard Grade or Ultra II memory cards. Other brands may not be fully compatible with this device and therefore may not function correctly.

Card size

Cards up to 4 Gb capacity may be used

SM2000

Advanced videographic recorder

Recording Duration

Approximate duration calculated for continuous recording of 6 channels of analog data (for 12 channels divide by 2, for 3 channels multiply by 2 etc.).

Binary Encoded File

Sample Rate	1 s	10 s	40 s	60 s	120 s	480 s
512 Mb Compact Flash	16 months	13 years	53 years	79 years	159 years	635 years

SM2000

Advanced videographic recorder

Analog Input Modules

General

Number of inputs

6 per board, max. of 12 inputs

Input types

Milliamperes, millivolts, voltage, resistance, THC, RTD, digital input

Digital input types

Type Volt-free contact

Minimum pulse duration 1 s

Thermocouple types

B, E, J, K, L, N, R, S, T

Resistance thermometer

PT100

Other linearizations

\sqrt{x} , $x^{3/2}$, $x^{5/2}$, custom linearization

Digital filter

Programmable 0 to 60 s

Display range

–999 to 9999

Common mode noise rejection

> 120 dB at 50/60 Hz with 300 Ω imbalance resistance

Normal (series) mode noise rejection

> 60 dB at 50/60 Hz

CJC rejection ratio

0.05 $^{\circ}\text{C}/^{\circ}\text{C}$

Sensor break protection

Programmable as upscale or downscale

Temperature stability

0.02 $\%/^{\circ}\text{C}$ or 2 $\mu\text{V}/^{\circ}\text{C}$

Long term drift

< 0.2 % of reading or 20 μV annually

Input impedance

> 10 M Ω (millivolts inputs)

500 k Ω (voltage inputs) externally mounted divider

10 Ω (mA inputs) externally mounted on terminals*

* Hart transmitters require a minimum 250 Ω loop impedance. A 250 Ω shunt resistor can be used together with the voltage divider board (GR2000/0375) to meet this requirement. In such cases the input should be programmed for 1...5 V.

Standard/High Specification Analog Input Modules

Linear Inputs	Standard Analog Input	High Specification Analog Input	Accuracy (% of reading)
Millivolts	0 to 2000 mV	–1000 to +1000 mV	0.1 % or $\pm 10 \mu\text{V}$
Milliamperes	0 to 50 mA	–100 to +100 mA	0.2 % or $\pm 2 \mu\text{A}$
Volts	0 to +20 V*	–50 to +50 V*	0.2 % or $\pm 10 \text{mV}$
Resistance Ω	0 to 5000 Ω	0 to 2000 Ω	0.2 % or $\pm 0.08 \Omega$
Sample Interval	100 ms per sample (2 modules are processed in parallel) gives worst case update times as follows: 600 ms for 6 or 12 channels — mV, mA, voltage 800 ms for 6 or 12 channels — THC 1100 ms for 6 or 12 channels — resistance, RTD	100 ms per sample (2 modules are processed in parallel) gives worst case update times as follows: 100 ms for 6 or 12 channels — all input types	
Input Isolation	35 V DC channel-to-channel	500 V DC channel-to-channel	
Isolation from Rest of Instrument	Galvanically isolated to 500 V DC	Galvanically isolated to 500 V DC	

*Requires external voltage divider board Part No. GR2000/0375

Number of relays

3 or 6 per module

Type and rating

Relay type single-pole changeover

Voltage 250 V AC 30V DC

Current 5 A AC 5 A DC

Loading (non-inductive) 1250VA 150 Ω

Note. The total load for all relays within the instrument must not exceed 36 A.

SM2000

Advanced videographic recorder

Hybrid Module

Digital I/O

Number	6 inputs and 6 outputs per card
Type	Volt-free switching inputs
Polarity	Negative, i.e. closed switch contact or 0 V = active signal
Digital input min. pulse	100 ms
Digital output voltage	5 V
Isolation	500 V from any other I/O

Analog output

Number	2 isolated
Configurable current range	0 to 20 mA
Max. load	750 Ω
Isolation	500 V DC from any other I/O
Accuracy	0.25 %

2-Wire Transmitter Power Supply Module

Number

2 isolated supplies per module

Voltage

24 V DC nominal

Drive

45 mA per supply, i.e. each module can drive $2 \times 2 = 4$ loops

Ethernet Module

Physical medium

10BaseT

Protocols

TCP/IP, ARP, ICMP, FTP (server), HTTP, MODBUS TCP (client + server)

FTP server functions

Directory selection & listing
File upload/download
Four independently configurable users with full or read-only access

Web server functions

Operator screen monitoring/selection. Remote monitoring of recording channels, analog/digital signals, alarms, totalizers and archiving

EMC

Emissions & Immunity

Meets requirements of:

EN50081-2

EN50082-2

EN61326 for an industrial environment

Electrical

Power supply

100 to 240 V AC ± 10 % (90 min. to 264 V max.) 50/60 Hz
(Optional) 24 V DC ± 4 V

Power consumption

35 VA max.

Power interruption protection

No effect for interruptions of up to 20 ms

Maximum accepted cable size

Instrument terminal block	14 AWG (1.63 mm OD)
GR2000/0375, GR2000/0377	15 AWG (1.45 mm OD)

Safety

General safety

EN61010-1

cULus

cCSAus

Overvoltage Class III on mains, Class II on inputs and outputs

Pollution category 2

Isolation

500 V DC to earth (ground)

Environmental

Operating temperature range

0 to 50 °C (32 to 122 °F) with Compact Flash

Operating humidity range

5 to 95 % RH (non-condensing)

Storage temperature range

-10 to 60 °C (14 to 140 °F)

Front panel sealing

IP66 and NEMA4X

Rear panel sealing

(with rear cover) IP40

(without rear cover) IP20

Vibration

Conforms to EM60068-2

Physical

Size

144 mm (5.67 in.) x 144 mm (5.7 in.) x 195 mm (7.68 in.) (depth behind panel)

Weight

2.6 kg (5.6 lb) approx. (unpacked)

Panel cutout

138 mm (5.43 in.) x 138 mm (5.43 in.)

Case material

10 % glass-filled polycarbonate

Display housing material

40 % glass-filled polycarbonate

Touchscreen

Double layer polyester coated toughened glass

Electrical Connections

*Note. 24 V DC instrument power supply must be specified when ordering.

Overall Dimensions

SM2000

Advanced videographic recorder

Ordering Information

SM2000 Advanced Videographic Recorder	SM20	XXX/	X	X	X/	X	X	X	X/	X	X/	XXX
Universal Analog Inputs												
None		00S										
6 – standard specification		06S										
12 – standard specification		12S										
6 – high specification		06H										
12 – high specification		12H										
Build Option												
Standard			B									
cCSAus*			C									
UL*			U									
Archive Media												
None (8 Mb internal flash memory only)				0								
Compact flash drive				2								
Software Option												
None					0							
Advanced Math & Logic					1							
Batch Recording					4							
Advanced Math & Logic & Batch Recording					5							
Option Modules												
Position A	Reserved for analog inputs								0			
	Reserved for analog inputs if 12 inputs are specified									0		
	3 relays									3		
Position B	6 relays									6		
	Hybrid – 6 digital inputs, 6 digital outputs, 2 analog outputs									H		
	2-wire transmitter power supply									T		
	None										0	
	3 relays										3	
Position C	6 relays										6	
	Ethernet (10BaseT) communications										E	
	Hybrid – 6 digital inputs, 6 digital outputs, 2 analog outputs										H	
	2-wire transmitter power supply										T	
	None											0
	3 relays											3
Position D	6 relays											6
	Hybrid – 6 digital inputs, 6 digital outputs, 2 analog outputs											H
	2-wire transmitter power supply											T
Front Bezel Style												
Standard IP66 and NEMA4X with media door lock												0
Power Supply												
100 to 240 V AC ±10 % (90 min. to 264 V max.) 50/60 Hz												2
24 V DC												3
Special Features												
Standard												STD
Custom configuration (customer to complete and supply SM2000 custom configuration sheet – INF08/036)												CUS
GAMP validation compatible instrument**												VAL
Engineered configuration (customer to supply configuration details required)												ENG

* Not available in conjunction with 24 V DC power supply

** Instrument supplied preconfigured to customer's requirements, together with calibration and conformity certificates. Configuration must be supplied using custom configuration sheet – [INF08/036](#)

Standard Accessories

Included with each recorder:

Panel-mounting Clamps

Media-door Lock keys

Shunt Resistors (1 per analog input)

Compact Flash Card (only with Compact Flash Memory Card option)

Optional Accessories

Compact Flash Cards

B12158 Compact Flash Card (2 Gb)

Card Reader

B12028 Compact Flash Reader (USB Interface)

Other

GR2000/0375 Voltage divider board (2 to 20 V) – per voltage input channel

GR2000/0375 Voltage divider board fitted with a 250 Ω shunt resistor

RDM500-CD DataManager Pro software

RDM500L DataManager Pro single user license

RDM500ML DataManager Pro multi-user license

CD/VALSM2000 SM2000 validation package template

ENG/REC After-sales engineered configuration service
