SM2000
Advanced videographic recorder

Raising the standards of data storage

Bright and clear display
— high contrast, thin film transistor (TFT) color screen

Secure data recording
— 8 Mb internal Flash memory for 12 recording channels and logs
— no battery back-up required

21 CFR Part II compliant data security
— extensive physical and electronic security features

Robust and convenient archive storage
— low cost, high reliability, Compact Flash option
— high capacity

Intuitive user interface
— dedicated operator keys and touchscreen configuration

Unsurpassed environmental protection
— hosedown to IP66 and NEMA4X standards

Flexibility to meet your application needs
— 6 or 12 universal inputs, I/O modules, math and communications

10BaseT Ethernet communications
— remote monitoring/access
— email notification of alarms and status reports

GAMP validation package
— 21 CFR part 11 compliant
SM2000 Advanced Videographic Recorder

SM2000

The SM2000 is a state-of-the-art solution to recording and data storage. It provides 12 recording channels and up to 12 universal analog inputs which can be viewed in a variety of display formats: chart, bargraph, digital indicator and process summary. Historical logs are provided for recording alarms, operator and system events and totalizer values.

A high quality, 14 cm (5.7 in.), TFT display and analog, resistive touchscreen provide a clear and intuitive user interface.

The SM2000 has an onboard Flash memory capacity of 8 Mb providing storage of up to 2.9 million samples. Process data can also be logged to a Compact Flash card, then transferred to a PC for storage and analysis.

Application areas include:
- Water treatment plants
- Cold storage
- Stack gas monitoring
- Environmental monitoring
- Autoclaves
- Food, Dairy and Beverage processing
- Furnaces
- Heat treatment
- Pulp & Paper
- Life sciences
Guaranteed Data Integrity

- The use of Flash memory technology ensures that the SM2000 is not reliant on batteries to preserve stored data during a power failure.
- In the internal memory, data is stored in small blocks with each block containing a checksum to ensure the integrity of that data.
- An enhanced error detection/correction code is built-in to the internal Flash memory, ensuring safe storage of your process data.
- 8 Mb of internal Flash memory is provided for buffering of data. The complete 8 Mb of data can be reviewed on the display of the SM2000. Once this memory is full it automatically wraps-around and overwrites the oldest data, ensuring that the latest process data is always captured.
- 12 recording channels are provided as standard which can be used to record any analog, digital or communications (via Modbus) signal. Each channel can be recorded at their own primary or secondary sample rate. This allows detailed information to be stored under specific process conditions e.g. critical process states or alarm conditions. Alternatively, for simple applications one sample rate can be applied to all channels. Through the use of pre-storage filters it is possible to record the average, max./min. or instantaneous value of any analog data.

Industrial Standard, Robust, Archive Storage

- Compact Flash memory card options can be fitted to the SM2000 for archiving purposes. Process data can be archived to the removable media in either of two configurable formats: comma-separated variable or binary encoded. In addition to the analog/digital recording channels, the alarm event, totalizer (if fitted) and audit logs can also be archived to the removable media.
- The solid-state nature of Compact Flash cards ensures that the SM2000 can truly operate in ambient temperatures up to 50 °C (122 °F) whereas traditional electro-mechanical floppy disk drives can operate only in temperatures up to 40 °C (104 °F).
- Every write to the archive storage media is verified to ensure the integrity of the data.
- Security of all process data stored to the memory card is always assured. Files stored in comma-separated variable format are attributed with an Encrypted Digital Signature and files stored in binary format are encoded securely with inbuilt integrity checks. Both formats of data storage are compliant with FDA standard 21 CFR Part II.

Security

- A Media door lock is fitted as standard to prevent unauthorized access to the removable media.
- Two security modes are available. In the first, a tamper-proof seal can be fitted to the front of the instrument to meet the requirements of regulatory bodies. In this mode, the configuration of the recorder can be altered only by first changing the position of an internal switch. To accomplish this the unit needs to be removed from its case, breaking the seal. In the second mode, the configuration can be protected by the use of four, individual, user-specific passwords.
21 CFR part 11 Compliance and GAMP Validation Package

With its comprehensive audit trail, secure archiving format and extensive physical and configuration security features, the SM2000 is ideally suited to applications where compliance to 21 CFR part 11 (the FDA’s regulations regarding electronic record keeping) is required (for further information refer to INF02/70).

In keeping with this, a template for validating the SM2000 videographic recorder is available. Following GAMP 5 (a risk-based approach to compliant GxP computerized systems), the template is designed to make the validation process as simple as possible and provides an IQ and OQ that is completed at the customer site, before and after installation. Once completed, the template is then packaged together with other documentation relating to the system as a whole, ready to be presented to the governing regulatory body for inspection.

Low Cost of Ownership

The large capacity of the storage media used on the SM2000 ensures that the requirement for operator intervention to transfer the data to a PC on a regular basis is greatly reduced. Older floppy disk technology, used by many other manufacturers of graphical recorders, limits storage capability significantly, sometimes to levels below the ability of a traditional paper recorder.

See below for an example of how memory storage times vary depending on the media device. The example shows the recording duration for a 6-channel recorder with a sample time of 10 s. Also included in the example is how these storage times compare with a traditional paper recorder.
Unsurpassed Environmental Protection

Unique to this type of product, the SM2000 has unrivalled protection ratings of IP66 and NEMA4X and includes a fully-sealed, lockable media door. This enables the SM2000 to be installed, without additional protection, in applications that require frequent hosedown. With industrial standard noise emission and immunity protection, the SM2000 operates effectively in high electrical-noise environments.

Intuitive User Interface
Operator Views

In addition to the standard chart view, a number of other operator views are available:

- **Process View**
  Provides an at-a-glance summary of each channel including alarm, totalizer and statistical (max./min.) information.

- **Digital Indicator View**
  Process value, engineering units, channel tag, associated totalizer (if applicable), and alarm status are all shown. Auto-sizing always ensures the clearest possible display.

- **Bargraph View**
  Horizontal or vertical format which includes min./max. and alarm trip point markers.

Historical Logs

Providing functions unavailable in paper-based recorders, three historical logs ensure complete validity of the recorder and its data. Any or all of these logs can be exported to the removable media:

- **Totalizer Log**
  Independent log intervals for each channel, enabling total, average, maximum and minimum readings to be time and date stamped.

- **Alarm Event Log**
  Complete display of all acknowledged and unacknowledged alarms, alarm state changes and operator messages.

- **Audit Log**
  Displays time, date and ID stamped system data including configuration, calibration changes, system errors and operation actions. This provides comprehensive evidence of the integrity, validity and traceability of the SM2000 and its measured data.

Configuration

During configuration mode the touchscreen of the SM2000 comes into operation. A simple Microsoft® Windows-style structure provides an intuitive approach to the setup of the recorder. Numerical and text values are quickly entered via the on-screen keyboard.

It is also possible to configure the SM2000 with a Windows-based PC configuration package.
On-line Data Review

The SM2000 provides a number of unique features to provide a clear view of your process:

- The screen interval can be altered to display between 18 s and 7 days of information, without it affecting the sample rate. This gives you the ability to ‘zoom in’ to a close-up view of the most current data or ‘zoom out’ to get the big picture.
- Individual traces can be temporarily removed from the screen to enable clear comparison of two or more trends.
- The SM2000 can easily review all historical data in the 8 Mb internal buffer memory at the touch of a button. During this time, recording of the process data to the internal memory remains unaffected.

Off-Line Review and Analysis

Using ABB’s DataManager Pro software, archived process data and historical logs recorded to a removable media card can be reviewed easily:

- Database management of data files provided by DataManager Pro ensures simple, secure long-term storage and retrieval of historical data.
- The graphing capabilities provided by DataManager Pro ensure easy interrogation of process data.
- The validity of all data files is always checked by DataManager Pro during the storage and retrieval process, ensuring maximum data integrity.

For further information on the capabilities of DataManager, Pro refer to data sheet DS/RDM500–EN.
Math and Logic

Available as an option are advanced math and logic capabilities. 12 multi-element math and 12 multi-element logic equations can be configured. Equations can be nested into each other to provide extensive capabilities.

- Mean, standard deviation and rolling averaging functions are provided.
- Standard addition, subtraction, multiplication and division are complemented with Log, Ln, Square root, power, Sin, Cos, Tan and absolute functions.
- Switching of process signals can be achieved via the high/low/mid signal selection and multiplexing functions.
- Predefined equations are provided for relative humidity and F0 calculations.
- AND, NAND, OR, NOR, XOR and NOT operators are available within the logic equations.

All math and logic equation results can be recorded on the display of the recorder and archived to the removable media. Detailed diagnostic functions are provided for both the math and logic equations.

Batch Recording

A batch recording option enables simple recording and reviewing of batch processes. When a batch is started it is tagged with a unique batch number, operator identification and three user-definable description fields. All information is entered on-screen with a history function allowing quick entry of commonly repeated descriptions.

Using DataManager Pro software batches can be simply and quickly traced for review using the unique batch number and description information entered at the time of recording. Additional functionality provides the ability to search and sort batch records for an entire production facility in many ways, including by product type, operator and time and date of processing.
Ethernet Communications

The SM2000 can provide 10BaseT Ethernet communications via a standard RJ45 connector and uses industry-standard protocols TCP/IP, FTP and HTTP. The use of standard protocols enable easy connection into existing PC networks.

Data File Access via FTP (File Transfer Protocol)

The SM2000 features FTP server functionality. This functionality provides high-speed access via Ethernet to data archived by the recorder.

- Using a standard web-browser or other FTP clients, data files contained within the SM2000’s internal memory and memory card can be accessed remotely and transferred to a PC or network drive.
- Four individual FTP users can be programmed into the SM2000. Access rights can be configured for each user specifying their access level.
- All FTP log-on activity is recorded in the audit log of the SM2000.
- Using ABB’s data file transfer scheduler program, data files from multiple recorders can be automatically backed-up to a PC or network drive for long term storage ensuring the security of valuable process data and minimizing the operator intervention required.

Embedded Web Server

Contained within the SM2000 is an embedded web-server allowing access to web pages created within the recorder. The use of HTTP (Hyper Text Transfer Protocol) enables standard web browsers to view these pages.

- Detailed with the web pages is the current display of the recorder, detailed information on process signals, alarm conditions, totalizer values and other key process information.
- The historical logs stored in the SM2000’s internal buffer memory can be displayed in full from within the web pages.
- Operator messages can be entered via the web server enabling comments to be logged to the recorder.
- All of the information displayed on the web pages is regularly refreshed enabling them to be used as a process supervision tool.

On-line Demonstration

A demonstration of these features is available from an on-line recorder accessible via the internet. In the address bar of your web browser enter "http://217.46.239.73".

Remote Access/Monitoring

Ethernet communications can provide a link to recorders installed in remote locations. Via the use of a dial-up router an SM2000 can be installed in a remote location and accessed via a public telephone network when required.

Email Notification

Using its inbuilt SMTP client the SM2000 is able to email notification of important events. Emails triggered from process alarms or other critical process events can be sent to multiple recipients. The recorder can also be programmed to email reports of the current status at specific times during the day. Status report content can be tailored to suit your specific process needs.
Specification

Operation and Configuration

Configuration

Via analog resistive touchscreen on front panel or PC Configuration

Multiple configuration files can be stored in internal (up to 16 files) or external memory (with removable media option fitted)

Configuration ports

3.5 mm jack socket for connection to RS232 port on a PC via an adapter

Display

Thin film transistor (TFT), active-matrix, color, liquid crystal display (LCD) with built-in backlight

Low-reflective, 14 cm (5.7 in.) diagonal display area, 76800 pixel display

*Note. A small percentage of the display pixels may be either constantly active or inactive. Max. percentage of inoperative pixels < 0.01 %

Viewing angle — Horizontal 45 ° typ. (left side, right side)

Vertical 30 ° from below, 15 ° from above

Screensaver

Can be programmed to dim the backlight if operator keys are not pressed for a selected period of time

Languages

English, German, French, Italian and Spanish

Dedicated operator keys

- Group select
- View select
- Menu key
- Up/Increment key
- Down/Decrement key
- Enter key

Chart screen intervals

Selectable from 18 s to 7 days

Chart scales

Independent primary and secondary ranges for each channel

Chart divisions

Programmable for up to 10 major and 10 minor divisions

Chart annotation

Alarm and operator messages may be annotated on the chart

Icons to identify the type of event, time of occurrence and tag are displayed
SM2000
Advanced videographic recorder

Security

Physical
Standard door lock

Configuration security
Password protection
Access to configuration is allowed only after the user has entered a password
Internal switch protection
Access to configuration is allowed only after a hardware switch has been set. This switch is situated behind a tamper-evident seal

Logging security
Configuration
Can be configured for password protection or free access to logging levels

Basic type security
4 individual users with unique username and passwords

Advanced type security
Number of users
Up to 12
Usernames
Up to 20 characters, Usernames are unique, i.e. names cannot be repeated
Access privileges
Logging access — Yes/No
Configuration access — None/load file only/limited/full
Passwords
Up to 20 characters
A minimum required password length of 4 to 20 characters can be configured and a password expiry time can be applied to eliminate password ageing
Password failure limit
Configurable for 1 to 10 consecutive occasions or ‘infinite’
A user is deactivated if a wrong password is entered repeatedly
Deactivation of inactive users
Can be disabled or configured for 7, 14, 30, 60, 90, 180 or 360 days of inactivity
Users are deactivated (by removal of access privileges) after a period of inactivity

Process Alarms

Number
24 (2 per recording channel)

Types
High/low: process, latch & annunciator
Rate: fast/slow

Tag
20-characters tag for each alarm

Hysteresis
Programmable value and time hysteresis – 1 to 9999 s

Alarm enable
Allows alarm to be enabled/disabled via a digital input

Alarm log enable
Recording of alarm state changes in the alarm/event log can be enabled/disabled for each alarm

Acknowledgement
Via front panel or digital signals

Update rate
300 ms

Real-time Alarms

Number
4

Programmable
Day of the week, 1st of month, start and duration times

Totalizer

Number
12 (1 per recording channel) 10-digit totals

Type
Analog or digital, batch and secure totals

Statistical calculations
Average, maximum, minimum (for analog signals)

Update rate
300 ms.

Custom Linearization

Number
2

Number of breakpoints
20 per linearizer

Standard Functionality

Operator Messages

Number
24 configurable messages of up to 20 characters each
1 operator defined message of up to 20 characters

Trigger
Via front panel or digital signals

Recording in alarm/event log
Can be enabled or disabled on configuration
SM2000
Advanced videographic recorder

Recording — to Internal Memory

Data Channels

Internal buffer memory
8 Mb Flash memory provides storage for 2.9 million samples
Oldest data is automatically overwritten by new data when memory is full

Data integrity checks
Checksum for each block of data samples
48-bit code for error detection/correction built-in

Independent process groups
2

No. of recording channels
12 (6 per group)

Sources
Analog inputs, Modbus input, any digital signal

Filters
Programmable for each channel to allow recording of: instantaneous values, average, max., min. and max. & min. value over sample time

Primary/secondary sample rates
Programmable from 0.1 s to 12 hours for each recording channel

Primary/secondary sample rate selection
Via any digital signal or from password protected menu

Recording start/stop control
Via any digital signal or from password protected menu

Recording Duration
Approximate duration calculated for continuous recording of 6 channels of analog data (for 12 channels divide by 2, for 3 channels multiply by 2 etc.).

Archiving — To Memory Card

File types that can be saved to removable media
- Recorded data for group 1 & 2 channels
- Alarm event log for group 1 & 2 alarms/events
- Totalizer log for group 1 & 2 totals
- Audit log
- Configuration

File Structure
- Configurable as either binary encoded or comma-separated

File name
20-character tag, prefixed with date/time according to the new file generation interval selected

Data verification
- Carried out automatically on all writes to removable-media files

Analog Input Modules

General
- **Number of inputs**: 6 per board, max. of 12 inputs
- **Input types**
  - Milliamps, millivolts, voltage, resistance, THC, RTD, digital input

Digital input types
- **Type**
  - Volt-free contact
- **Minimum pulse duration**: 1 s

Thermocouple types
- B, E, J, K, L, N, R, S, T

Resistance thermometer
- PT100

Other linearizations
- √x, x², x⁵/₂, custom linearization

Digital filter
- Programmable 0 to 60 s

Display range
- —999 to 9999

Common mode noise rejection
- > 120 dB at 50/60 Hz with 300 Ω imbalance resistance

Sample Interval
- 100 ms per sample (2 modules are processed in parallel) gives worst case update times as follows:
  - 600 ms for 6 or 12 channels — mV, mA, voltage
  - 800 ms for 6 or 12 channels — THC
  - 1100 ms for 6 or 12 channels — resistance, RTD

Input Isolation
- 35 V DC channel-to-channel

Isolation from Rest of Instrument
- Galvanically isolated to 500 V DC

*Requires external voltage divider board Part No. GR2000/0375

Normal (series) mode noise rejection
- > 60 dB at 50/60 Hz

CJC rejection ratio
- 0.05 °C/°C

Sensor break protection
- Programmable as upscale or downscale

Temperature stability
- 0.02 %/°C or 2 µV/°C

Long term drift
- < 0.2 % of reading or 20 µV annually

Input impedance
- > 10 MΩ (millivolts inputs)
- 500 kΩ (voltage inputs) externally mounted divider
- 10 Ω (mA inputs) externally mounted on terminals*

* Hart transmitters require a minimum 250 Ω loop impedance. A 250 Ω shunt resistor can be used together with the voltage divider board (GR2000/0375) to meet this requirement. In such cases the input should be programmed for 1…5 V.

RS485 Serial Communications

Number of ports
1 as standard

Connections
RS485, 2- or 4-wire

Protocol
Modbus RTU slave + master

2-wire Transmitter Power Supply

Number
1 fitted as standard

Voltage
24 V DC

Drive
Up to 50 mA, i.e. can drive 2 loops

Advanced Math

Math Blocks

Type
12 equations provide ability to perform general arithmetic calculations including F0, mass flow (of ideal gases), relative humidity and emissions calculations

Size
40-character equation

Functions
+, −, /, log, Ln, Exp, Xn, +, Sin, Cos, Tan, mean, rolling average, standard deviation, high/median/low select, multiplexer, absolute, relative humidity

Tags
8- and 20-character tags for each block

Update rate
1 enabled Math block is updated every 100 ms

Logic Equations

Number
12

Size
11 elements each

Functions
AND, OR, NAND, NOR, XOR, NOT

Tags
20-character tag for each equation

Update rate
300 ms

Modules

3- or 6-Relay Output Modules

Number of relays
3 or 6 per module

Type and rating
Relay type single-pole changeover

Voltage 250 V AC 30V DC

Current 5 A AC 5 A DC

Loading (non-inductive) 1250VA 150 Ω
SM2000
Advanced videographic recorder

Hybrid Module

Digital I/O
- Number: 6 inputs and 6 outputs per card
- Type: Volt-free switching inputs
- Polarity: Negative, i.e. closed switch contact or 0 V = active signal
- Digital input min. pulse: 100 ms
- Digital output voltage: 5 V
- Isolation: 500 V from any other I/O

Analog output
- Number: 2 isolated
- Configurable current range: 0 to 20 mA
- Max. load: 750 Ω
- Isolation: 500 V DC from any other I/O
- Accuracy: 0.25 %

2-Wire Transmitter Power Supply Module
- Number: 2 isolated supplies per module
- Voltage: 24 V DC nominal
- Drive: 45 mA per supply, i.e. each module can drive 2 x 2 = 4 loops

Ethernet Module
- Physical medium: 10BaseT
- Protocols: TCP/IP, ARP, ICMP, FTP (server), HTTP, MODBUS TCP (client + server)
- FTP server functions
  - Directory selection & listing
  - File upload/download
  - Four independently configurable users with full or read-only access
- Web server functions
  - Operator screen monitoring/selection. Remote monitoring of recording channels, analog/digital signals, alarms, totalizers and archiving

EMC
- Emissions & Immunity
  - Meets requirements of: EN50081-2, EN50082-2, EN61326 for an industrial environment

Electrical
- Power supply
  - 100 to 240 V AC ±10 % (90 min. to 264 V max.) 50/60 Hz
  - (Optional) 24 V DC ± 4 V
- Power consumption: 35 VA max.
- Power interruption protection
  - No effect for interruptions of up to 20 ms
- Maximum accepted cable size
  - Instrument terminal block: 14 AWG (1.63 mm OD)
  - GR2000/0375, GR2000/0377: 15 AWG (1.45 mm OD)

Safety
- General safety
  - EN61010-1
  - cULus
  - cCSAus
  - Overvoltage Class III on mains, Class II on inputs and outputs
  - Pollution category 2
- Isolation
  - 500 V DC to earth (ground)

Environmental
- Operating temperature range: 0 to 50 ºC (32 to 122 ºF) with Compact Flash
- Operating humidity range
  - 5 to 95 % RH (non-condensing)
- Storage temperature range
  - —10 to 60 ºC (14 to 140 ºF)
- Front panel sealing
  - IP66 and NEMA4X
- Rear panel sealing
  - (with rear cover) IP40
  - (without rear cover) IP20
- Vibration
  - Conforms to EM60068-2

Physical
- Size
  - 144 mm (5.67 in.) x 144 mm (5.7 in.) x 195 mm (7.68 in.) (depth behind panel)
- Weight
  - 2.6 kg (5.6 lb) approx. (unpacked)
- Panel cutout
  - 138 mm (5.43 in.) x 138 mm (5.43 in.)
- Case material
  - 10 % glass-filled polycarbonate
- Display housing material
  - 40 % glass-filled polycarbonate
- Touchscreen
  - Double layer polyester coated toughened glass
**Electrical Connections**

*Note. 24 V DC instrument power supply must be specified when ordering.

**Overall Dimensions**

#### Standard Accessories

Included with each recorder:
- Panel-mounting Clamps
- Media-door Lock keys
- Shunt Resistors (1 per analog input)
- Compact Flash Card (only with Compact Flash Memory Card option)

#### Optional Accessories

##### Compact Flash Cards
