266MST
Differential pressure transmitters
Measurement made easy
Engineered solutions for all applications

Base accuracy
- 0.04 % of calibrated span (optional, 0.025 %)

Proven sensor technology together with state–of–the–art digital technology
- Large turn down ratio of up to 100:1

Comprehensive sensor selection
- Optimized overall performance and stability

10–year stability
- 0.15 % of URL

Flexible configuration options
- Local configuration via operating buttons on LCD indicator

TTG (Through–The–Glass) keypad technology
- Enables quick and easy local configuration without the need to open the cover – even in explosion proof environments

IEC 61508 certification
- For SIL2– (1oo1) and SIL3– (1oo2) applications

Full compliance with Pressure Equipment Directive (PED) category III

Product in compliance with Directive 2011/65/UE (RoHS II)

In-built advanced diagnostics
## Specification – functional

Span limit

Maximum span = URL
(can be adjusted for differential pressure transmitters up to ± URL (TD = 0.5) within the measuring range limits)

**NOTICE**

To optimize performance characteristics, it is recommended that you select the transmitter sensor code with the lowest turn down ratio.

**Recommendation for square root function**

At least 10 % of upper measuring range limit (URL)

**Zero position suppression and elevation**

The zero position and span can be set to any value within the measuring range limits listed in the table if:

- adjusted span ≥ smallest span

**Damping**

Configurable time constant between 0 and 60 s. This is in addition to the sensor response time.

**Turn on time**

Ready for operation as per specifications in less than 10 s with minimum damping

**Insulation resistance**

> 100 MΩ at 500 V DC (between terminals and ground)

---

Second sensor of the 266MST differential pressure transmitter for absolute pressure measurement

Measuring range: 41 MPa, 410 bar, 5945 psi (2 MPa, 20 bar, 290 psi for sensor code A)
### Specification – operative limits

#### Pressure limits

**Overpressure limits**

The differential pressure transmitters, models 266MST, work without damage within the following pressure limits:

<table>
<thead>
<tr>
<th>Sensors</th>
<th>Filling fluid</th>
<th>Overpressure limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensor A</td>
<td>Silicone oil</td>
<td>0.5 kPa abs., 5 mbar abs., 0.07 psia and 2 MPa, 20 bar, 290 psi</td>
</tr>
<tr>
<td>Sensor A</td>
<td>Inert (Galden)</td>
<td>17.5 kPa abs., 175 mbar abs., 2.5 psia and 2 MPa, 20 bar, 290 psi</td>
</tr>
<tr>
<td>Sensors C to R</td>
<td>Silicone oil</td>
<td>0.5 kPa abs., 5 mbar abs., 0.07 psia and 16 MPa, 160 bar, 2320 psi, or 41 MPa, 410 bar, 5945 psi or 60 MPa, 600 bar, 8700 psi depending on code variant selected *</td>
</tr>
<tr>
<td>Sensors C to R</td>
<td>Inert (Galden)</td>
<td>17.5 kPa abs., 175 mbar abs., 2.5 psia and 16 MPa, 160 bar, 2320 psi, or 41 MPa, 410 bar, 5945 psi or 60 MPa, 600 bar, 8700 psi depending on code variant selected *</td>
</tr>
</tbody>
</table>

* 1 MPa, 10 bar, 145 psi for Kynar–PVDF

#### Static pressure limits

The differential pressure transmitters, models 266MST, work within the specifications with the following limit values:

<table>
<thead>
<tr>
<th>Sensors</th>
<th>Filling fluid</th>
<th>Static pressure limits</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensor A</td>
<td>Silicone oil</td>
<td>3.5 kPa abs., 35 mbar abs., 0.5 psia and 2 MPa, 20 bar, 290 psi</td>
</tr>
<tr>
<td>Sensor A</td>
<td>Inert (Galden)</td>
<td>17.5 kPa abs., 175 mbar abs., 2.5 psia and 2 MPa, 20 bar, 290 psi</td>
</tr>
<tr>
<td>Sensors C to R</td>
<td>Silicone oil</td>
<td>3.5 kPa abs., 35 mbar abs., 0.5 psia and 16 MPa, 160 bar, 2320 psi, or 41 MPa, 410 bar, 5945 psi or 60 MPa, 600 bar, 8700 psi depending on code variant selected *</td>
</tr>
<tr>
<td>Sensors C to R</td>
<td>Inert (Galden)</td>
<td>17.5 kPa abs., 175 mbar abs., 2.5 psia and 16 MPa, 160 bar, 2320 psi, or 41 MPa, 410 bar, 5945 psi or 60 MPa, 600 bar, 8700 psi depending on code variant selected *</td>
</tr>
</tbody>
</table>

* 1 MPa, 10 bar, 145 psi for Kynar–PVDF

#### Test pressure

The pressure transmitters can withstand a pressure test with the following line pressure without leakage:

266MST, up to 1.5 x nominal pressure (static pressure limit) simultaneously on both sides.

Meets hydrostatic test requirements of ANSI/ISA S 82.03.
**Temperature limits °C (°F)**

**Environment**

This is the operating temperature.

<table>
<thead>
<tr>
<th>Model 266MST</th>
<th>Ambient temperature limits</th>
</tr>
</thead>
<tbody>

**Humidity during storage**

| Relative humidity       | Up to 75%                    |
...Specification – operative limits

Limits for environmental effects

Electromagnetic compatibility (EMC)
  In accordance with EN 61326 and Namur NE–21 (option).
  Overvoltage strength in accordance with IEC 1000–4–5 EN 61000–4–5 (with overvoltage protection): 4 kV

Pressure Equipment Directive (PED)
  The instruments with maximum operating pressure of 25 MPa, 250 bar, 3625 psi or 41 MPa, 410 bar, 5945 psi or 60 MPa, 600 bar, 8700 psi comply with the guideline 2014/68/EU category III module H.

Humidity
  Relative humidity: up to 100 %.
  Condensation, icing: permitted.

Vibration resistance
  Acceleration up to 2 g at frequencies of up to 1000 Hz (according to IEC 60068-2-6).
  Acceleration limited to 1 g for housing out of stainless steel.

Shock resistance
  In accordance with IEC 60068–2–27
  Acceleration: 50 g
  Duration: 11 ms

IP rating
  In accordance with EN 60529, JIS C0920
  The transmitter is dust and sand proof and protected against immersion effects.
  • IP 67, IP 68 on request, NEMA 4X
  • IP 65 (devices with Harting Han plug connector)
  • IP 66 (devices with barrel housing made from aluminum or stainless steel housing)

Hazardous atmospheres
  With or without integral display

Technical Regulations Customs Union EAC (Russia, Kazakhstan, Belarus), Inmetro (Brazil)

The permissible ambient temperature ranges (within the limits of -50 to 85 °C) are specified in the type examination certificates dependent upon the temperature class.
Specification – electrical data and options

HART® digital communication and 4 to 20 mA output

Device type
1a07hex (listed at the FieldComm Group)

Power supply
The transmitter operates in an operating voltage range of 10.5 – 42 V DC with no load and is protected against reversed polarity (additional loads enable operation above 42 V DC).

During use in Ex ia zones and in other intrinsically safe applications, the operating voltage must not up–scale 30 V DC.

Minimum operating voltage

<table>
<thead>
<tr>
<th>Voltage</th>
<th>Condition</th>
</tr>
</thead>
<tbody>
<tr>
<td>12.3 V DC</td>
<td>Device with the option “S2 – overvoltage protection”</td>
</tr>
<tr>
<td>10.8 V DC</td>
<td>Devices with the option “YE – NE21 conformity”</td>
</tr>
</tbody>
</table>

Ripple
Maximum 20 mV over a 250 Ω load in accordance with HART specifications.

Load limitations
Total loop resistance at 4 to 20 mA and HART:

\[ R \ (k \Omega) = \frac{V \ (V \ DC) - V \ (DC)}{22 \ mA} \]

A minimum resistance of 250 Ω is required for HART communication.

Overvoltage protection (optional)
Up to 4 kV
- Voltage: 1.2 μs rise time / 50 μs delay time to half the value
- Voltage: 8 μs rise time / 20 μs delay time to half the value

Output signal
Two–wire output 4 – 20 mA, selectable by the operator: linear or square root output signal, characteristic curve with the exponents 3/2 or 5/2, square root for bidirectional flow, linearization table with 22 points (i.e. for level measurements in lateral, cylindric containers and spherical containers).

The HART communication provides the digital process variables which are superimposed on the 4 to 20 mA signal (protocol in accordance with Bell 202 FSK standard).

Standard setting: high alarm current
...Specification – electrical data and options

**FOUNDATION Fieldbus™ output**

**DeviceType**
- Link–Master
- The Link Active Scheduler (LAS) capability is implemented.
  Manufacturing code: 000320 (hex)
  Device type code: 0007 (hex)

**Power supply**
- The transmitter works in a operating voltage area of 9 to 32 V DC, independent of the polarity with or without overvoltage protection.
- During use in Ex ia zones, the operating voltage must not exceed 24 V DC (object certification) or 17.5 V DC (FISCO certification) in accordance with FF–816.

**Input Current**
- Operation (quiescent current): 15 mA
- Residual current limit value 20 mA maximum

**Output signal**
- Physical layer in accordance with IEC 11582 / EN 61158, transmission with Manchester II modulation with 31.25 kBit/s.

**Function blocks / cycle time**
- 3 extended analog input blocks / 25 ms max. (each)
- 1 extended PID block / 40 ms max.
- 1 Standard Arithmetic block / 25 ms
- 1 Standard Input Selector block / 25 ms
- 1 Standard Control Selector block / 25 ms
- 1 Standard Signal Characterization block / 25 ms
- 1 Standard Integrator / Totalizer block / 25 ms

**Damping**
- Configurable time constant between 0 and 60 s.
  This is in addition to the sensor response time, and can be adjusted via the optional LCD indicator, handheld terminal, or PC user interface.

**Number of link objects**
- 35

**Number of VCRs**
- 35

**Output interface**
- FOUNDATION Fieldbus digital communication protocol in accordance with standard H1, fulfills the specification V 1.7

**Operating mode during transmitter malfunction**
- The output signal will be “frozen” to the last value in case of severe transmitter errors, if this is recognized by the self–diagnosis, which also shows error conditions.
- In case of electronic errors or short–circuits, the current consumption is electronically limited to a set value (approx. 20 mA) for the safety of the network.

**Insulation resistance**
- >100 MΩ at 500 V DC (between terminals and ground).
PROFIBUS PA output

**DeviceType**

- Pressure transmitter conform with profile 3.0.1
- Indent number: 3450 (hex)

The transmitter works in a operating voltage area of 9 to 32 V DC, independent of the polarity with or without overvoltage protection.

During use in EEx ia zones, the operating voltage must not exceed 17.5 V DC.

Intrinsically safe installation in accordance with the FISCO model.

**Input Current**

- Operation (quiescent current): 15 mA
- Residual current limit value 20 mA maximum

**Output signal**

- Physical layer in accordance with IEC 1158–2 / EN 61158–2, transmission with Manchester II modulation with 31.25 kBit/s.

**Output interface**

- PROFIBUS PA communication in accordance with PROFIBUS DP 50170 part 2 / DIN 19245 part 1–3

**Output cycle time**

- 25 ms

**Data blocks**

266MST:

- 1 “Physical Block”
- 3 “Analog Input” blocks
- 1 “Pressure Transducer Block” with calibration
- 1 “Transducer Block Advanced Diagnostics” with recognition of clogged impulse lines
- 1 “Transducer Block” local display

**Operating mode during transmitter malfunction**

In case of heavy transmitter errors, which are recognized by self-diagnosis, the output signal can be put into defined states, which can be chosen by the operator: safe, most recent or calculated value.

In case of electronic errors or short-circuits, the current consumption is electronically limited to a set value (approx. 20 mA) for the safety of the network.

LCD display

**Integral LCD display (code L1)**

- Wide screen LCD display, 128 x 64 pixel, 52.5 x 27.2 mm (2.06 x 1.07 in), dot matrix, multilingual.
- Four buttons for device configuration and management.
- Easy setup for quick commissioning.
- Customized visualizations which the user can select.
- Total value and actual value flow indication.
- The display can also be used to show static pressure, sensor temperature, and diagnosis notice, as well as make configuration settings.

**Integral LCD display with TTG–(Through–The–Glass) operation (code L5)**

- As with the integral LCD display above, but featuring an innovative TTG (Through–The–Glass) button technology which can be used to activate the device’s configuration and management menus without having to remove the transmitter housing cover.
- The TTG (Through–The–Glass) buttons are protected against accidental activation.
**Specification - measuring accuracy**

Reference conditions in accordance with IEC 60770.
Ambient temperature 20 °C (68 °F), rel. humidity 65 %, atmospheric pressure 1,013 hPa (1,013 mbar), position of measuring cell (separating diaphragm areas) vertical, measuring span based on zero point, separating diaphragms made from stainless steel AISI 316 L or Hastelloy, silicone oil filling fluid, HART digital trim values equal to 4 and 20 mA span end points, linear characteristic curve.

Unless otherwise stated, errors are specified as a % of the span value.

Some measuring accuracy levels relating to the upper measuring range limit (URL) are affected by the current turn down (TD); i.e., the ratio of the upper measuring range limit to the already set span.

**FOR OPTIMUM MEASURING ACCURACY, IT IS RECOMMENDED THAT YOU SELECT THE SENSOR CODE WHICH WILL PROVIDE THE LOWEST TD VALUE.**

**Dynamic response (in accordance with IEC 61298–1)**

<table>
<thead>
<tr>
<th>Sensors</th>
<th>Time constant (63.2 % of total step response)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Sensors F to R</td>
<td>150 ms</td>
</tr>
<tr>
<td>Sensor C</td>
<td>400 ms</td>
</tr>
<tr>
<td>Sensor A</td>
<td>1000 ms</td>
</tr>
<tr>
<td>Reaction time for all sensors</td>
<td>40 ms</td>
</tr>
</tbody>
</table>

Response time (total) = delay time + time constant

**Measuring error (Elin)**
In % of calibrated span, consisting of terminal–based non–linearity, hysteresis, and non repeatability.
In the case of fieldbus devices, SPAN refers to the analog input function block output scaling.

**Ambient temperature (EΔTz + EΔTs)**
per 20 K change within the limits of –40°– 85 °C (per 36 °F change within the limits of -40° to 185 °F):

<table>

Power supply  
Within the limit values for the voltage / load, the total influence is less than 0.005 % of the upper measuring range limit values per volt.

Load  
Within the load / voltage limits, the total influence is negligible.

Electromagnetic field  
Meets all requirements of EN 61326 and NAMUR NE–21 (optional).

Common–mode interference  
No influence from 100 V rms @ 50 Hz, or 50 V DC.

Mounting position  
Rotations in the plane of the diaphragm have a negligible effect. A tilt from the vertical of up to 90° causes a zero point shift of up to 0.35 kPa (3.5 mbar, 1.4 inH2O), which can be corrected by making an appropriate zero position adjustment. There is no effect on the measuring span. In applications where a dynamic inclined installation is required (e.g. naval applications with maximum vessel inclination of +/-22.5°), the maximum error can be up to 2.5 mbar. Such error might be resulting in a deviation from the standard accuracy with percentual magnitude depending on the range of the selected device. In case of non-dynamic inclined installations, this effect can be eliminated by performing a zero calibration in the field. Please contact ABB to assess more in details on the installation effects.

Long-term stability

Sensors C to R:  
± 0.15 % of URL over a period of 10 years (± 0.05 % URL/year)

Sensor A:  
± 0.3 % of URL over a period of 10 years (± 0.2 % URL/year)

Total performance  
Temperature change of 28 °C (50 °F), only 266MST: up to 10 MPa, 100 bar, 1450 psi static pressure with base accuracy option D1 (0.025 %)

<table>

The specification of total performance includes:
- the measuring error (non linearity including hysteresis and non repeatability),
- the thermal change of the ambient temperature to zero signal and measuring span
- the influence of the static pressure on the measuring span, influence on zero signal corrected after commissioning.

\[ E_{\text{Total}} = \sqrt{(E_{\Delta Tz} + E_{\Delta Ts})^2 + E_{\Delta Ps}^2 + E_{\text{lin}}^2} \]

\[ E_{\text{Total}} = \text{Total Performance} \]

\[ E_{\Delta Tz} = \text{Effect of the ambient temperature on zero signal} \]

\[ E_{\Delta Ts} = \text{Effect of the ambient temperature on span} \]

\[ E_{\Delta Ps} = \text{Effect of the static pressure on the span} \]

\[ E_{\text{lin}} = \text{Measuring error} \]
Specification – physical

(Refer to ordering information sheets for variant availability related to specific model or versions code)

Materials

Process separating diaphragms (1)
- Stainless steel 1.4435 (AISI 316L)
- Hastelloy C276, Monel 400; Monel 400, gold plated; tantalum

Process flanges, adapters, screw plugs, and vent / drain valves *
- Stainless steel 316 (1.4408) and 316L (CF3M ; 1.4404)
- Hastelloy C276; Monel 400; Kynar
  (flange made of stainless steel AISI 316L with PVDF insert)

Sensor filling fluid
- Silicone oil, inert fill (Galden)

Mounting bracket **
- Galvanized C steel with chromium passivation; stainless steel AISI 316L.

Seals *
- Viton (FPM); Buna (NBR); EPDM; PTFE or FEP–coated Viton (only for PVDF Kynar process connection); graphite

Pressure sensor housing
- Stainless steel 1.4404 (AISI 316L)

Screws and nuts
- Screws and nuts made from stainless steel AISI 316, class A4 70 or class A2–70 as per UNI 7323 (ISO 3506) in compliance with NACE MR0175 Class II

Electronics housing and cover
- Aluminum alloy (copper content ≤ 0.3 %) with baked epoxy finish (color RAL 9002); stainless steel AISI 316L.

Cover O–ring
- Buna N (Perbunan)

Operating element for local zero point, measuring span, and write protection settings
- Non–intrusive design (removable) made of glass fiber reinforced polypropylene oxide.

Plates

Transmitter nameplate: AISI 316 ss screwed to the electronics housing.
Certification plate and optional tag/calibration plate: self-adhesive attached to the electronics housing or AISI 316 ss fastened to the electronics housing with rivets or screws.
Optional wired-on customer data plate: AISI 316 ss.
Laser printing on metal or thermal printing on self-adhesive.
For AISI 316 L ss housing it is mandatory to select option I2 or I3 for plates in AISI 316 ss.
Optional wired-on customer data plate can be populated with customized data (4 lines of 32 characters 4 mm/0.16 in high).
Customized data have to be provided separately: in case of no data, the wired-on plate will be delivered blank.

Calibration

Standard: 0 to measuring range upper limit, for ambient temperature and atmospheric pressure
Optional: To specified measuring span

* Wetted parts of the transmitter.
** U-bolt material: Stainless steel AISI 400.
Screw material: high-strength alloy steel or stainless steel AISI 316.
Optional extras

Mounting bracket
For vertical and horizontal 60 mm (2 in) pipes or wall mounting

LCD display
Rotatable in 4 positions in 90° steps

Additional tag plates
Code I2: For tag and/or calibration details (up to 20 characters), in stainless steel, fastened to the transmitter housing.
Code I1: For customer data (4 lines of 30 characters each), in stainless steel, wired to the transmitter housing.

Overvoltage protection
• Code S2

Cleaning stage for oxygen application (O2)
Code P1

Certificates (inspection, implementation, characteristics, material certificate)
Code Cx and Hx

Name plate and operating instruction language
Code Tx and Mx

Communication plug connector
Code Ux

Valve manifold installation
Code A1: Factory installation and pressure test of the ABB M26 valve manifold.

Electrical connections

Two 1/2–14 NPT or M20 x 1.5 tap holes for cable glands, directly on the housing.
Special communication connector (on request)
• HART: Straight or angled Harting Han 8D plug with a mating plug.
• FOUNDATION Fieldbus, PROFIBUS PA: plug M12 x 1 or 7/8 in.

Terminals
HART–Version: Three connections for signal / external display, for wire cross-sections up to 2.5 mm² (14 AWG) and connection points for inspection and communication purposes.
Fieldbus versions: Two signal connections (bus connection) for wire cross-sections up to 2.5 mm² (14 AWG)

Grounding
There are internal and external ground terminals available for 6 mm² (10 AWG) wire cross-sections.

Mounting position
The transmitters can be installed in any position.
The electronic housing can be rotated into any position. A stop is provided to prevent overturning.

Weight
(without options)
Approximately 3.7 kg (8.2 lb); add 1.5 kg (3.3 lb) for stainless steel housing.
Add 650 g (1.5 lb) for packaging

Packaging
Carton with dimensions of approx. 28 x 23 x 24 cm (11 x 9 x 9 in)

Process connections

Flanges: 1/4–18 NPT on the process axis
Adapters: 1/2–14 NPT on the process axis
Center distance (266MST):
54 mm (2.13 in) between flanges; 51 mm, 54 mm, or 57 mm (2.01 in, 2.13 in, or 2.24 in) between adapters
Fastening screw threads:
7/16–20 UNF with 41.3 mm center distance;
only for process flange code C.
M10 with operating pressures of up to 16 MPa, 160 bar, 2320 psi or
M12 with higher operating pressures of up to 41 MPa, 410 bar, 6000 psi
## Specification – configuration

### Transmitter with HART communication and 4 to 20 mA

**Standard configuration**

The transmitters are calibrated in the factory to the measuring range specified by the customer. The calibrated area and the tag number are written on the name plate. If this data was not specified, the transmitter is delivered with unlabeled plate and the following configuration:

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical unit</td>
<td>kPa</td>
</tr>
<tr>
<td>4 mA</td>
<td>Zero</td>
</tr>
<tr>
<td>20 mA</td>
<td>Upper measuring range limit (URL)</td>
</tr>
<tr>
<td>Output</td>
<td>Linear</td>
</tr>
<tr>
<td>Damping</td>
<td>1 s</td>
</tr>
<tr>
<td>Operating mode during transmitter malfunction</td>
<td>High alarm</td>
</tr>
<tr>
<td>Software tag (max. 8 characters)</td>
<td>Free</td>
</tr>
<tr>
<td>Optional LCD display</td>
<td>PV in kPa; output in mA and in percent as bargraph</td>
</tr>
</tbody>
</table>

Individual or all of the above mentioned configurable parameters, including lower range value and upper range value (in the same unit of measurement), can easily be changed with a portable HART Handheld terminal or with the PC configuration software with the DTM for 266 models.

The specifications for flange type and materials, materials of the O–rings and the vent / drain valves as well as other device options are saved in the transmitter database.

### Tag and Calibration

Tag and/or specific calibrated span can be requested when configuring the device.

Two tag types are available: Short Tag and Long Tag.

See below table for details about tag type applicability / presence:

<table>
<thead>
<tr>
<th>Type</th>
<th>Max Length</th>
<th>On Display</th>
<th>On Certification</th>
<th>On Device Label</th>
</tr>
</thead>
<tbody>
<tr>
<td>Short Tag</td>
<td>8 digits</td>
<td>YES</td>
<td>YES</td>
<td>NO</td>
</tr>
<tr>
<td>Long Tag</td>
<td>32 digits</td>
<td>NO</td>
<td>YES</td>
<td>YES</td>
</tr>
</tbody>
</table>

In case no specific indication will be given about the tag type, data will be considered as Long Tag by default.

In case tag is required on the optional wired-on customer data plate (optional digits I1, I3) specific indication needs to be given.

### Customer specific configurations (option N6)

The following data can be specified in addition to the standard configuration parameters:

- **Description:** 16 alphanumeric characters
- **Supplementary information:** 32 alphanumeric characters
- **Date:** Day, month, year

- Pa, kPa, MPa
- inH2O @ 4 °C, mmH2O @ 4 °C, psi
- inH2O @ 20 °C, ftH2O @ 20 °C, mmH2O @ 20 °C
- inHg, mmHg, Torr
- g/cm2, kg/cm2, atm
- mbar, bar

These and others are available for PROFIBUS PA and FOUNDATION Fieldbus.
Transmitter with PROFIBUS PA communication

Standard configuration

The transmitters are calibrated in the factory to the measuring range specified by the customer. The calibrated area and the tag number are written on the name plate. If this data was not specified, the transmitter is delivered with unlabeled plate and the following configuration:

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Designation of gas connections</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical unit</td>
<td>kPa</td>
</tr>
<tr>
<td>Output scaling 0 %</td>
<td>Measuring range lower limit (LRL)</td>
</tr>
<tr>
<td>Output scaling 100 %</td>
<td>Upper measuring range limit (URL)</td>
</tr>
<tr>
<td>Output</td>
<td>Linear</td>
</tr>
<tr>
<td>Upper alarm limit</td>
<td>Upper measuring range limit (URL)</td>
</tr>
<tr>
<td>Lower warning limit</td>
<td>Measuring range lower limit (LRL)</td>
</tr>
<tr>
<td>Lower alarm limit</td>
<td>Measuring range lower limit (LRL)</td>
</tr>
<tr>
<td>Hysteresis limit value</td>
<td>0.5% of output scaling</td>
</tr>
<tr>
<td>PV filter time</td>
<td>0 s</td>
</tr>
<tr>
<td>Address (set via local</td>
<td>126</td>
</tr>
<tr>
<td>operating buttons)</td>
<td></td>
</tr>
<tr>
<td>Long Tags</td>
<td>30 alphanumeric characters</td>
</tr>
<tr>
<td>Optional LCD display</td>
<td>PV in kPa; output in percent as</td>
</tr>
<tr>
<td></td>
<td>bargraph</td>
</tr>
</tbody>
</table>

Individual or all of the above mentioned configurable parameters, including the measuring range values (in the same unit of measurement), can easily be changed with the PC configuration software with the DTM for 266 models.

The specifications for flange type and materials, materials of the O–rings and the vent / drain valves as well as other device options are saved in the transmitter data bank.

Customer specific configurations (option N6)

The following data can be specified in addition to the standard configuration parameters:

Description: 32 alphanumeric characters
Supplementary information: 32 alphanumeric characters
Date: Day, month, year

Transmitter with FOUNDATION Fieldbus communication

Standard configuration

The transmitters are calibrated in the factory to the measuring range specified by the customer. The calibrated area and the tag number are written on the name plate. If this data was not specified, the transmitter is delivered with unlabeled plate and the analog input function block FB1 is configured as follows:

<table>
<thead>
<tr>
<th>Configuration</th>
<th>Designation of gas connections</th>
</tr>
</thead>
<tbody>
<tr>
<td>Physical unit</td>
<td>kPa</td>
</tr>
<tr>
<td>Output scaling 0 %</td>
<td>Measuring range lower limit (LRL)</td>
</tr>
<tr>
<td>Output scaling 100 %</td>
<td>Upper measuring range limit (URL)</td>
</tr>
<tr>
<td>Output</td>
<td>Linear</td>
</tr>
<tr>
<td>Upper alarm limit</td>
<td>Upper measuring range limit (URL)</td>
</tr>
<tr>
<td>Upper warning limit</td>
<td>Upper measuring range limit (URL)</td>
</tr>
<tr>
<td>Lower warning limit</td>
<td>Measuring range lower limit (LRL)</td>
</tr>
<tr>
<td>Lower alarm limit</td>
<td>Measuring range lower limit (LRL)</td>
</tr>
<tr>
<td>Hysteresis limit value</td>
<td>0.5% of output scaling</td>
</tr>
<tr>
<td>PV filter time</td>
<td>0 s</td>
</tr>
<tr>
<td>Address (set via local</td>
<td>126</td>
</tr>
<tr>
<td>operating buttons)</td>
<td></td>
</tr>
<tr>
<td>Long Tags</td>
<td>30 alphanumeric characters</td>
</tr>
<tr>
<td>Optional LCD display</td>
<td>PV in kPa; output in percent as</td>
</tr>
<tr>
<td></td>
<td>bargraph</td>
</tr>
</tbody>
</table>

The analog input function blocks FB2 and FB3 are each configured for the sensor temperature measured in °C and the static pressure measured in MPa. Individual or all of the above mentioned configurable parameters, including the measuring range values, can be changed with every FOUNDATION Fieldbus compatible configurator.

The specifications for flange type and materials, materials of the O–rings and the vent / drain valves as well as other device options are saved in the transmitter data bank.

Customer specific configurations (option N6)

The following data can be specified in addition to the standard configuration parameters:

Description: 32 alphanumeric characters
Supplementary information: 32 alphanumeric characters
Date: Day, month, year
### Dimensions

(not design data) – dimensions in mm (inch)

---

Figure 2: Transmitter with barrel housing - horizontal flanges

(*) 54 (2.13) mm (inch) over 1/4 – 18 NPT process flange
51 (2.01), 54 (2.13) or 57 (2.24) mm (inch) over 1/2 – 14 NPT adapter flange;

Note: process connection and gasket groove comply with IEC 61518 screw threads for adapter flange or other components (e.g. valve manifold etc.) on the process flange 7/16 – 20 UNF
Figure 3: Transmitter with mounting bracket, for vertical or horizontal mounting on 60 mm (2 in) pipe

(*) 54 (2.13) mm (in) via 1/4 – 18 NPT process flanges
51 (2.01), 54 (2.13), or 57 (2.24) mm (in) via 1/2 – 14 NPT adapter flanges.

Note: Process connection and gasket groove comply with IEC 61518. Thread for attaching adapter flanges or other components (e.g., manifold) to process flange: 7/16 – 20 UNF.
...Dimensions

...(not design data) – dimensions in mm (inch)

72 (2.83) With vent / drain valve
### Electrical connections

#### HART version

![Electrical connection diagram](image)

Figure 6: Electrical connection – HART Version

The HART handheld terminal can be connected to any wiring termination point in the loop as long as a minimum resistance of 250 Ω is present between handheld terminal and transmitter power supply. If it is less than 250 Ω, additional resistance wires must be installed to enable a communication.
## Fieldbus version

Note 1: Not available with Diaphragm Material code M, V, T, C, Y, D
Note 2: Select connector with additional ordering code
Note 3: Only available with Sensor Span Limits code F, L, N
Note 4: Not available with output code 2, 3
Note 5: Minor parts with factory certificate acc. EN 10204
Note 6: Not available with Approvals code YE
Note 7: Not available with Sensor Span Limits codes A,C,F,L
Note 8: The ambient temperature lower limit is -55 degrees C
Note 9: The ambient temperature lower limit is -52 degrees C

Standard delivery scope (changes possible with additional ordering code)

- Adapters supplied loose
- Sealing plugs for horizontal connection flanges on the process axis; not for PVDF Kynar insert or for vertical connection flanges (no vent / drain valves)
- For standard applications (without explosion protection)
- No display, no mounting bracket, no surge protection
- Multilanguage short–form operating instruction and English labeling
- Configuration with kPa and °C units
- No test, inspection, or material certificates
Important notice
If nothing else was determined before the manufacturing, then the customer is responsible for ensuring the compatibility of the materials of the wetted part and the filling fluid with the measuring medium by suited selection.

Coordination with NACE directives
- The labeled materials comply with the directive NACE MR0175/ISO 15156 for the application in sulfurous environments during the oil and gas production. As different application boundaries apply for different materials, please observe the version of the directive that is current. The materials AISI 316 / AISI 316L, Hastelloy C 276, Monel 400 also comply with the directive NACE MR0103 for the application in sulfurous environments in oil and gas processing.
- According to NACE MR0175, materials for pressurized screws are differentiated by application:
  - In contact with sulfurous environments: screws, that can come in direct contact with sulfurous environments, e.g. by underfloor installation or installation in dense protective enclosures
  - Not in contact with sulfurous environments: screws, which are only in contact with standard, non-sulfurous environments

The cap screw of the pressure transmitter 266MST, comply with the requirements according to NACE MR0175 for screws that are not in contact with sulfurous environments.
