

FOR A GREENER GRID

Micropole transformer (3 kVA or less)

Efficient, reliable power for small, isolated load applications

ABB's single-phase, pole-mounted "micropole" transformer designed for small, isolated load applications.

The small, lightweight design provides savings in system load losses and ease of handling during installation and uses less pole space. The micropole can be used in multiple configurations and custom designs are available as well to fit the needs of both utility customers and original equipment manufacturers (OEM).
