Emissions Monitoring.
We’ve got a nose for it.

Continuous emissions monitoring for industry

Whether it is for a power plant, incinerator or steel works, the list of applications that our proven range of gas analysers can work with just keeps on growing.

With increasingly strict environmental legislation and penalties controlling emissions from your plant, ensuring compliance is no longer a choice.

Our modular, compact systems help you to meet the demands of the CEN standards for continuous emissions monitoring i.e. EN14181. MCerts and TüV approved, they have remote control and maintenance, and integrated packages that include dust and reporting capabilities.

Take the next steps to ensure compliance and contact our sales team. They have the sharpest noses in the business.
