ABB automation products for water
Enhanced plant performance, efficiency and reliability.
Water – a critical resource
Water is a limited resource. Frequent water shortages, reduced water quality, and increasing supply and processing costs are the most evident impacts of this. To achieve an effective reversal of this trend, water resources need to be protected and activities related to water intake, treatment, transmission and distribution need to be optimized.

Various measures are needed, including programs to raise the awareness of users about the importance of water conservation, as well as upgrading facilities for the supply, processing and distribution of primary waters according to specific energy saving and industrial resource-management criteria. Upgrades can also benefit wastewater processing such as purification and disposal, including its treatment for industrial and farming uses.

How to improve facility efficiency and cost-effectiveness
To reduce energy consumption and costs, ABB offers one of the most advanced ranges of high-efficiency motors and variable speed drives (VSDs).

ABB manufactures EFF 1 and EFF 2 motors; class EFF 1 motors – the most efficient category of motors – can provide energy savings up to 20 percent.

VSDs are used to control the pumps’ speed, thereby efficiently regulating flow and pressure levels according to the water consumption demand. This can lead to energy savings of 30 to 60 percent.

Additionally, maintenance costs are lower as motor speed control through VSDs reduces mechanical and electric stress that impacts the pump set components. Even pumps that operate at constant flow can benefit from the soft-start and soft-stop functionality of a VSD, thereby placing less stress on the motor and pump.

ABB’s instrumentation portfolio includes the world’s first flowmeter calibration verification tool that has helped municipalities detect leaks in aging infrastructures. In addition ABB’s analyzers help reduce chemical usage reducing environmental impact and cost.

A complete range of products for the water industry
For nearly 50 years, ABB has been equipping thousands of water treatment facilities with electric systems and automation for any type of water application.

In addition to motors, VSDs, soft starters and instrumentation
ABB provides:

**Industrial control, protection and automation, including:**
- Overload relays
- Contactors
- Control and signaling units
- Programmable logic control systems
- Limit switches and sensors
- Fieldbus interfaces

**Power supply systems and installations can also be built from the most suitable solutions from among ABB’s wide-ranging offering:**
- Medium-voltage systems and equipment
- Low-voltage distribution, including:
  - panels or insulating material
  - control, protection, monitoring and measurement devices
  - wiring and connection components
  - cable ducts, equipment holders and gangways

ABB products are compliant with international standards and are designed and built in accordance with the most advanced environmental compatibility standards.

One stop, one shop: The benefit of partnering with ABB
The more complex the facility, the more beneficial it is to rely upon a single supplier.

A supplier that is able to provide top-quality products and systems to equip the entire process, from on-site instruments to remote control and monitoring stations.

A supplier that ensures component operation is fully integrated without any risk of incompatibility. A supplier that, when needed, provides technical support across all of the equipment and functionalities which make up the systems.

This is why ABB is the ideal partner for companies operating in the water treatment, transmission and distribution sector. With a presence in over 100 countries worldwide, ABB’s expertise and full-range offering can help to solve all issues, from the design stage to the startup, and throughout the systems’ entire life cycle.
Demand for water is rising at three times the rate of population growth. ABB’s motors and drives reduce energy consumption in treatment plants and ABB’s instruments help to detect leaks and minimize chemical usage, reducing waste and improving quality at step.
Automation products for the complete water cycle

Industrial Use
- Motors
- VSDs & soft starters
- Control gear & MCCs
- Instrumentation
- PLC
- Installation equipment

Waste | Sewage Pumping
- Motors
- VSDs & soft starters
- Control gear & MCCs
- Instrumentation
- PLC / SCADA
- Installation equipment

Treatment Plant Inlet
- Motors
- VSDs & soft starters
- Control gear & MCCs
- PLC
- Instrumentation
- Installation equipment

Water Storage
- Motors
- VSDs & soft starters
- Control gear & MCCs
- Instrumentation
- Installation equipment

Residential
- Motors
- Instrumentation
- Installation equipment

Pumping Station
- Motors
- VSDs & soft starters
- Control gear & MCCs
- Instrumentation
- PLC / SCADA
- Installation equipment
## Products

### Variable speed drives
- **Low voltage AC and DC drives**

### Medium voltage AC drives

- **Power range from 315 kW to more than 100 MW; voltages 2.1 to 10 kV.**
- For induction, synchronous and permanent magnet motors.
- ABB medium voltage drives are suitable for new or existing motors and meet the most stringent requirements for current and voltage harmonic distortions as defined by international standards.

### High voltage motors

<table>

Instrumentation

**Flowmeters**
- Electromagnetic flowmeters featuring fieldbus communications, CalMaster calibration verification and battery-powered models with GSM modules
- Coriolis and thermal mass flow-meters
- Vortex and ABB’s unique Swirl flowmeter
- Differential pressure and variable area flowmeters

**Pressure transmitters**
Complete range of intelligent electronic transmitters for measuring absolute pressure, gauge pressure, differential and level pressure

**Level measurements**
Piezoresistive and variable capacitance level measurement

**Temperature measurements**
Wide range of thermocouple and RTD sensors, thermowells and smart transmitters

**Analytical instruments**
- Sensors and transmitters for conductivity, dissolved oxygen, pH/redox, chlorine
- Turbidity analyzers
- Ion-sensitive and colorimetric analyzers, including: chlorides, fluorides, nitrates, phosphates, aluminum, iron and manganese
- UV monitors: nitrates

Metering devices

**Electricity meters**
Single-phase and three-phase meters

**Measurement instruments**
Digital and analog instruments

**LV system**
MNS switchgear platform for low voltage (400 and 690 V)
Power center with high performances (6300 A - 100 kA) and compact dimensions.
Intelligent Motor Control Center (MCC) designed to be easily connected with ECS and DCS systems with possibility of supervision software for proactive maintenance.
High flexibility: fixed, removable and withdrawable modules; arc proof and anti-seismic versions.

**Modular DIN rail products**
A wide product range offering functionalities like protection and switching, checking and monitoring, control and programming.
**Circuit-breakers and switches**

- **Automatic**
  - MCBs: \( I_u \) up to 100 A; \( I_{cu} \) up to 25 kA
  - MCCBs: \( I_u \) up to 630 A; \( I_{cu} \) (380/415 V AC) up to 200 kA
  - Moulded-case: \( I_u \) up to 630 A; \( I_{cu} \) (400 V AC) up to 50 kA

- **Isolators**
  - Switch disconnectors: from 16 to 3150 A
  - Switch fuses: from 16 to 160 A
  - Enclosed safety switches

**Programmable logic controllers and operator panels**

- **Flexible scalable PLC**
  - AC500 – Modular platform concept, various communication and fieldbus couplers for networking, simple and continuous expandability, configurable I/O, seamless integration of control and field devices, economical and IEC61131-3 compliant

- **Displays and operator panels**
  - CP400 – Quick and easy project creation and management, user friendly secured data and operations, simplified adaptability and connectivity, choices from simple text display to touch sensitive color screens, RoHS compliant

**Motor protection and control**

- **Motor protection**
  - Manual motor starters: nominal current from 0.1 to 100 A
  - Universal motor controller (UMC)

- **Soft starters**
  - From 3 to 1810 A

- **Contactors and miniature size contactors**
  - For up to 400 kW

- **Thermal overload and protection relays**
  - Bimetal or electronic

- **Command and signaling units**
  - (Modular and compact versions) Push buttons, switches, warning lights, luminous floor boxes

**Enclosures**

- **Sheet-steel boards**
  - Boxes, multipurpose enclosures
    - Height from 300 to 1200 mm; Width from 200 to 800 mm; Depth from 150 to 300 mm
  - Switchboards and cabinets
    - Height from 1800 to 2200 mm; Width from 400 to 1200 mm; Depth from 300 to 1000 mm

- **Plastic enclosures**
  - Consumer units and special enclosures
    - Emergency enclosures
    - Modular enclosures for IEC 309-1 sockets

**Electronic products and relays**

- **Power supply**
  - Relays (conventional and electronic)
  - Signal converters
  - Timers
Medium voltage switchgear, apparatus, modular systems (up to 52 kV) and distribution automation (up to 110 kV) for industrial, commercial and utility applications.

SCADA

ABB automation products for water
ABB has nearly half a century experience in equipping thousands of water treatment facilities. It supplies products and systems for any type of application in the water cycle. Below are some examples.

**Urban water distribution**
ABB supplied motors, drives, control switchgear and instrumentation to MWA (Metropolitan Waterworks Authority) in Bangkok, which provides tap water to 11 million people. MWA owns and operates one of the world’s biggest water treatment plants and more than 30 pumping stations. Electricity costs amounted to almost 50 percent of MWA’s production cost. The equipment supplied by ABB helps MWA to achieve energy savings of more than $10,000/month for a pumping station.

**Industrial water**
ABB supplied drives, motors, transformers and control panels for the Ras Laffan Common Cooling Water Project, which supplies vital cooling water to Ras Laffan Industrial City, one of the world’s fastest-growing industrial export locations. The cooling water system pumps 833,000 cubic meters of cooling water an hour to the power plant, LNG trains and petrochemical facilities.

**Sewage**
ABB supplied instrumentation, motors and drives for Singapore’s Changi Water Reclamation Plant project, which is designed to meet Singapore’s wastewater treatment needs through the 21st century. The new water reclamation plant will treat 528 million gallons of used water per day.

**Water treatment**
ABB supplied motors, drives and instrumentation to Scottish Water, the fourth-largest water utility in the U.K. Scottish Water operates about 47,000 kilometers of water mains, 48,000 kilometers of sewers, 370 water-treatment works and 1800 wastewater treatment works.

**Desalination**
ABB will supply AC500 PLC systems to the Hadera desalination plant in Israel. The reverse osmosis (RO) plant, which is scheduled to go on line in 2010, will produce approximately 100 million cubic meters of fresh water a year.
ABB is a leading supplier of automation products and services. It operates in more than 100 countries and has one of the largest service organizations with field service engineers located all over the world. Wherever you are, ABB is there for you.

The following services are part of ABB’s comprehensive service portfolio:
- Diagnosis/Verification
- Engineering and consulting
- Environmental services
- Extension
- Installation and commissioning
- Maintenance and field services
- Migration and upgrades
- Repair and refurbishment
- Retrofit
- Spare parts
- Support and remote services
- Training
