ABB Ability™ eSOMS Mobile Maintenance 2.0
General availability from September 29, 2017

ABB is pleased to announce the general availability of eSOMS Mobile Maintenance 2.0, the essential solution for plant operations management data collection and analysis needs in a mobile environment.

**Power and flexibility in your hands**
ABB Ability eSOMS Mobile Maintenance 2.0 provides the software tools that not only eliminate the need for paper-based procedures, rounds and log sheets in the field, but also bring a whole new level of power and flexibility to plant operators.

Mobile Maintenance allows maintenance supervisors to sign on and off clearances, and maintenance workers to sign on and off work order holders in the field. In the past, this had to be done in a work planning office or at a kiosk, which is inefficient.

With Mobile Maintenance, workers can be briefed before the job in the field and then immediately signed onto the clearance for protection, giving a more accurate accounting of who is being protected by the clearance. When work is complete, workers can immediately sign off in the field, eliminating the need to wait in line at a kiosk or office before leaving the worksite.

Mobile Maintenance 2.0 supports eSOMS version 5.0 and 6.0. It is certified on the following mobile operating systems:

- Windows® 10 tablet
- iOS® 10.3 iPhone/iPad
- Android® 6.0 phone/tablet

The following languages are provided for use with Mobile Maintenance 2.0:

- English
- Chinese – simplified
- French

**What it means for you**
With Mobile Maintenance 2.0, you’ll enjoy:

- **Mobile technology improvements**: Modern user experience helps workforce transition
- **Lower training costs**: Consumer mobile devices help to lower costs and expand use across industries
- **Lower IT costs**: Speeds up the process of entering events using WiFi / cellular instead of hard connection syncing
- **Easier access to information**

**More information**
