Turnkey solutions from a technology leader? 

Certainly.

With a legacy of technology and innovation, ABB is a substation partner you can rely on. Utilities, municipalities and industrial plants throughout the U.S. depend on us for major substation expansions, retrofit or greenfield. As a turnkey solution provider, ABB takes complete responsibility for the design, engineering, supply, erection and commissioning of the substation and offers full lifecycle support. For markets like windpower, we offer pre-engineered solutions for the collector and interconnect substations. We can also provide economic and reliability analysis between various substation or transmission designs. For many customers, our turnkey substation will provide the lowest total cost, the shortest schedule and the lowest risk. www.abb.us/substations
