The ABB life cycle management model is designed to manage an orderly transition to new replacement products or to choose from various lifetime extending services. At the same time the model ensures access to continuing support for our customers.

**Current life cycle status**
The mentioned product sub-type of ACS6000 drive is in **Classic** phase according to the ABB life cycle model outlined above.

**Life cycle plan**
The plan is to transfer this product sub-type of the ACS6000 drive to the **Limited** life cycle phase in 06.2019. This is in coordination of the parallel product of the ACS6000 (Modernization with BCU-55) product sub-type.

ABB’s promise is to keep this product subtype at least 10 years in Classic life cycle phase after the last unit has been delivered or to provide an Upgrade service to extend the full life cycle support to at least 10 years.

**Product availability in Classic life cycle phase**
This product subtype is not available for sale. It represents drive’s installations where the recommended Life cycle upgrade services were applied.

**Recommended actions**
Besides the regular maintenance it is recommended to check the possibility for Option Upgrade service in order to respond to specific customer needs and/or changed process requirements.

Due to the shorter life cycle of the control hardware, ABB strongly recommends combining the main board upgrade service (if available) with the 10-year preventive maintenance.
Service availability in Classic life cycle phase

See details at new.abb.com/drives/Services and contact your local ABB representative for availability.

Available Services

- Service Agreements
- Training (e-learnings, classroom, on-site)
