

# On-Site Training

Official classroom courseware and equipment brought directly to your team

A skilled and efficient workforce is a plant's most valuable asset. Along with your production process, your workforce is key to optimizing your equipment's performance and maximizing your return on investment. ABB University US offers On-Site Training services for many standard courses physically at your facility when travel to a training center is not practical.

## More students enrolled = More money saved

The cost of class tuition, weekend travel pay, and travel & living expenses for a week of training can add up. On-site training offers a significant cost savings opportunity for group sizes of 6 – 12 students:

Enrollment	In-Center cost	On-Site cost
3	\$16,200	\$27,914
4	\$21,600	\$28,745
5	\$27,000	\$29,594
6	\$32,400	\$30,434
7	\$37,800	\$31,274
8	\$43,200	\$32,114
9	\$48,600	\$32,954
10	\$54,000	\$33,794

Eliminate your employee travel costs and time away from home while providing your staff with the skills needed to efficiently run your control system.

## Audience and additional information

- Effective course delivery format for groups of engineers, maintenance personnel, and operators to gain skills and competencies
- Ideal for customers that are upgrading or installing a new system and cannot have several employees simultaneously away from the facility
- Can also be delivered at a local hotel conference room to help avoid classroom distractions

## Contact Us

To request a proposal for On-Site Training, e-mail [abbuniversity@us.abb.com](mailto:abbuniversity@us.abb.com) and specify your system type, desired topics to be included in the training, and anticipated number of students.

An experienced ABB University US representative will conduct a Needs Analysis to identify knowledge gaps and match the best ABB University US courses to meet the team's unique training needs in this customized private class.
