NEW !! NEW !! WinRCP

New Windows based configuration software is now available.
Now available from ABB, WinRCP is a Windows based remote communications program that serves as a tool for users to access and control information in ABB Protective Relays. Relays supported include most versions of MDAR, MMCO, REL301/302, REL350, REL352, REL356, ERNI, RONI and SADI.

Download Instructions:
The WinRCP registration link below will direct you to the registration page for the WinRCP software. Once completing the registration, click the submit button and you will be re-directed to the WinRCP Software download page. The registration is required as a contact means for future upgrades.
