AX460, AX466 and AX416
Single and dual input analyzers for pH/Redox (ORP)
Measurement made easy
More processing power, higher performance

Cost effective
• select one or two pH/Redox (ORP) inputs or combine pH/Redox (ORP) and conductivity in one analyzer

Reduced installation cost
• easy access terminations; reduced panel space

High functionality at minimum cost
• three alarms and two fully isolated current outputs
• integral water / chemical sensor cleaner control
• integral PID controller (AX460)

Expanded monitoring and control
• add-on option board provides a total of five alarm relays and four current outputs
• service logbook providing historical data

On line assurance of reliability
• comprehensive sensor and instrument self-checking

Energy saving
• high visibility, backlit display with auto switch-off function

Reduced yearly maintenance costs
• 12 to 30 V DC option negates the need for costly safety tests

Wide range of applicability
• water and waste water treatment
• power, pure water
• semiconductors
• chemicals
• pharmaceuticals
• pulp & paper
The AX400 series
AX400 analyzers incorporate the latest technology to provide highly reliable, flexible, feature-packed devices that satisfy a diverse range of process monitoring and control applications. The complete range encompasses solutions for pH/Redox (ORP), conductivity and dissolved oxygen.

AX46x analyzers enable continuous measurements of one or two pH or Redox (ORP) points with simultaneous local display and retransmission. AX46x is used with glass, enamel and antimony pH electrodes and metal Redox sensors, providing measurements with exceptional accuracy and performance.

AX400 series analyzers are available for either wall-/pipe- or panel-mounting and are rated to IP65.

High functionality as standard
All versions are supplied with two, fully isolated current outputs as standard, that can be assigned to the measured parameter, sample temperature or any appropriate calculated variables.

Three programmable relay set points are available that can also be assigned as required.

Innovative features such as power-saving display and a diagnostic current output option all contribute to a low cost of ownership.

Plug-and-produce expanded control
An advanced function card provides an additional two current outputs and two further alarm relays that can be assigned to either measured values or sample temperature.

ABB plug-and-produce software automatically reconfigures the analyzer if an option board is added later. No user programming is necessary.

A real-time clock and logbook are also included, making the full-facility versions extremely powerful and versatile.

Significantly reduced maintenance costs
The AX400 analyzers are supplied as standard for 85 to 265 V AC operation. There are no inner switches to set.

They can also be provided for 24 V AC or 12 to 30 V DC supply and recognize automatically which of the two supplies is being used. 24 V DC operation reduces maintenance costs significantly by negating the need for costly, yearly safety tests to ensure compliance with safety procedures.
Energy saving display

The backlit display has been designed to operate in all types of environments and shows both the measured parameter(s) and, on a separate 16-character display line, diagnostic and computed information.

On dual-input analyzers both measured parameters are displayed simultaneously.

For conservation of energy, the backlight can be set to switch off automatically after 60 s of inactivity.

---

Dual input measurement for critical duties

The AX400 enables two continuous measurements with simultaneous local display and retransmission. This capability provides an on-line validation of the process measurement.

Making two simultaneous measurements and configuring one of the set points as a difference alarm provides continuous on-line checking and early warning of an invalid measurement.

---

Easy access installation terminals

Easy access to the terminations ensures rapid and cost-effective installation. The wall-/pipe-mount version has been designed to ensure that cable connection is simple and convenient. Ingress protection of the electronics section is retained even when the terminal compartment is opened.

---

Detecting breakthrough of ammonia in a chiller unit is made possible with dual measurement. Comparison before and after the chiller ensures extremely rapid leakage detection, preventing damage to the system.
Waste treatment pH and Redox (ORP)

pH and Redox (ORP) are essential control parameters when removing toxic chromium ions from waste water in metal-finishing applications. Dual pH and Redox analyzers and integral control simplifies installation and reduces investment costs.

Just-in-time maintenance

One of the most vulnerable times for a pH electrode is during reintroduction into the line. If used with a solution earth rod, AX46x analyzers with advanced diagnostic facilities can detect sensor breakages as they occur. In addition, they can detect sensors out-of-process and several reference faults for fault diagnosis and reduced downtime.

Reduced maintenance through in-line cleaning

Many installed pH sensors benefit from regular cleaning. When carried out manually, this can be laborious and costly – so is often ignored. Advanced AX400 pH analyzers make it possible to automate sensor cleaning by using a programmable wash-timer contact to activate a cleaning agent valve or pump.

Pulsed water-wash and jet-wash chemical clean actions are standard, user-selectable functions. The frequency and duration of the wash can be tuned to meet the requirements of the application.

For chemical cleaning a 60 liter (13 gallon) sensor cleaning station can be supplied (model no. AA0010), complete with delivery pump and low level alarm. Chemical cleaning has proved particularly successful on potable drinking water plants where manganese and iron in the sample can create unacceptably high levels of maintenance. Effective cleaning reduces cost of ownership.
### Combined conductivity and pH

The AX416 version measures conductivity and pH with the same analyzer. The option board provides the capability to retransmit pH, conductivity and both sample temperatures. Five programmable alarms can be assigned to suit the needs of the application, enabling even the most demanding requirements to be met.

![Simultaneous conductivity and pH measurement](image)

### AX460 integral P, PI and PID control

The single input AX460 analyzers incorporate three-term PID Control, offering three modes of sophisticated control: analog, pulse length (time proportional) and pulse frequency. These are supplied as standard and can be operated in direct- or reverse-acting mode, dependent upon the application.

**Auto / Manual and bumpless transfer**

An auto / manual feature is incorporated for rapid manual access to the control functions. The controller facilitates bumpless transfer between manual and auto modes, providing the measured variable is within the proportional band and some integral action time has been programmed.

![AX460 – integral P, PI, and PID control](image)

### Current output proportional control

In this case, the control signal is provided by the 4 to 20 mA output of the AX460 analyzers rather than using the alarm / control contacts. The magnitude of the current output changes in proportion to the deviation from set point. This method is used generally with motorized valves or when controlling the speed of dosing pumps with a 4 to 20 mA proportional input.

![Current output proportional control](image)

### Time proportioning control (pulse length)

With time proportioning control, the AX460 analyzer’s control signal output is in pulses, the duration of which changes in proportion to the system error. The pulses are delivered by varying the length of time that the alarm / control contact is activated.

Time proportioning control is used generally to control dosing by low-cost solenoid valves or metering pumps and is also known as pulse-length proportional or ‘Mark Space’ control.

![Time proportioning control](image)
Bi-directional control
As well as single set point control for both acid and base addition, the AX460 analyzer can be configured with independent controllers.

To avoid control overlap, a minimum of 0.5 pH difference (or deadband) between the set points is essential. The difference between the set points varies depending upon the application.

Control of each set point can be configured independently as either P or PI control in this mode. The setting of proportional band or integral action can also be different for each set point.

Pulse-frequency proportional control
Impulse pumps dosing chemical reagents are controlled easily by the AX460 analyzer’s pulse-frequency proportional control output. In this case, the pulse length of the alarm / control contact is fixed and the frequency of the delivered pulses increases in proportion to the system error, as set by the proportional band. Diaphragm metering pumps must have a remote pulse input capability in order to utilize this function.

Pulse-frequency control in the AX460 analyzer operates by pulsing a relay on for 300ms and off for a period of time determined by the pulse frequency. The pulse frequency (PFr) is adjustable between 1 and 120 pulses per minute. The greater the difference between the measured variable and the set point the greater the pulse frequency.

Example
If the pulse frequency is set at 120 pulses per minute and the percentage output is 100 % then the pulse rate is 2 pulses per second. If the percentage output is reduced to 50 %, the pulse rate falls to one pulse per second.

Power failure recovery
In the event of a power failure the user can configure the control mode to be Auto, Manual or Last. This optimizes control conditions on power-up to ensure rapid recovery of process control.
Specification

**pH/Redox (ORP) – AX460 and AX466**

**Inputs**
- One or two* pH or mV inputs and solution earth
- One or two* temperature sensors
- Enables connection to glass or enamel pH and reference sensors and Redox (ORP) sensors

**Input resistance**
- Glass: >1 x 10^{13} Ω
- Reference: 1 x 10^{13} Ω

**Range**
- −2 to 16 pH or −1200 to +1200 mV

**Minimum span**
- Any 2 pH span or 100 mV

**Resolution**
- 0.01 pH

**Accuracy**
- 0.01 pH

**Temperature compensation modes**
- Automatic or manual Nernstian compensation
  - Range: −10 to 200 °C (14 to 392 °F)
- Process solution compensation with configurable coefficient
  - Range: −10 to 200 °C (14 to 392 °F)
  - Adjustable: −0.05 to 0.02 %/°C (−0.02 to 0.009 %/°F)

**Temperature sensor**
- Programmable Pt100, Pt1000 or Balco 3kΩ

**Conductivity – AX416 only**

**Range**
- Programmable 0 to 0.5 to 0 to 10,000 μS cm⁻¹ (with various cell constants)

**Minimum span**
- 10 x cell constant

**Maximum span**
- 10,000 x cell constant

**Units of measure**
- μS cm⁻¹, μS m⁻¹, mS cm⁻¹, mS m⁻¹, MΩ-cm and TDS

**Accuracy**
- Better than ±0.01 % of span (0 to 100 μS cm⁻¹)
- Better than ±1 % of reading (10,000 μS cm⁻¹)

**Operating temperature range**
- −10 to 200 °C (14 to 392 °F)

**Temperature compensation**
- −10 to 200 °C (14 to 392 °F)

**Temperature coefficient**
- Programmable 0 to 5 %/°C and fixed temperature compensation curves (programmable) for acids, neutral salts and ammonia

**Temperature sensor**
- Programmable Pt100 or Pt1000

**Reference temperature**
- 25 °C (77 °F)

**Display**

**Type**
- Dual 5-digit, 7-segment backlit LCD

**Information**
- 16-character, single line dot-matrix

**Energy-saving function**
- Backlit LCD configurable as ON or Auto-Off after 60 s

**Logbook**
- Electronic record of major process events and calibration data

**Real-time clock**
- Records time for logbook and auto-manual functions

---

*AX466 only

**Available if option board is fitted.
Relay outputs – on/off
Number of relays
Three supplied as standard or five with option board fitted
Number of set points
Three supplied as standard or five with option board fitted
Set point adjustment
Configurable as normal or failsafe high / low or diagnostic alert
Hysteresis of reading
Programmable 0 to 5 % in 0.1 % increments
Delay
Programmable 0 to 60 s in 1 s intervals
Relay contacts
Single-pole changeover
Rating 5 A, 115 / 230 V AC, 5 A DC
Insulation
2 kV RMS contacts to earth / ground

Analog outputs
Number of current outputs (fully isolated)
Two supplied as standard or four with option board fitted
Output ranges
• 0 to 10, 0 to 20 or 4 to 20 mA
• Analog output programmable to any value between 0 and 22 mA to indicate system failure
Accuracy
±0.25 % FSD, ±0.5 % of reading (whichever is the greater)
Resolution
0.1 % at 10 mA, 0.05 % at 20 mA
Maximum load resistance
750 Ω at 20 mA
Configuration
Can be assigned to either measured variable or either sample temperature

Digital communications
Communications
Profibus DP (with option board fitted)

Control function – AX460 only
Controller type
P, PI, PID (configurable)
Control outputs
Output
Can be assigned a maximum of two relays, two analog outputs, or one of each
Analog
Current output control (0 to 100 %)
Time proportioning cycle time
1.0 to 300.0 s, programmable in increments of 0.1 s
Pulse frequency
1 to 120 pulses per minute, programmable in increments of 1 pulse per minute
Controller action
Reverse, direct or bi-directional (programmable)
Proportional band
0.1 to 999.9 %, programmable in increments of 0.1 %
Integral action time (Integral reset)
1 to 7200 s, programmable in increments of 1 s (0 = Off)
Derivative
0.1 to 999.9 s in increments of 0.1 s – only available for single set point control
Auto / Manual
User-programmable

Access to functions
Direct keypad access
• Measurement, maintenance, configuration, diagnostics and service functions
• Performed without external equipment or internal jumpers

Sensor cleaning function
Configurable cleaning action relay contact
• Continuous
• Pulse in 1 s on and off times
Frequency
5 minutes to 24 hours, programmable in 15 minute increments up to 1 hour then in 1 hour increments for 1 to 24 hours
Duration
15 s to 10 minutes, programmable in 15 s increments up to 1 minute then in 1 minute increments up to 10 minutes
Recovery period
30 s to 5 minutes, programmable in 30 s increments
...Specification

Mechanical data
Wall- / Pipe-mount versions
- IP65 (not evaluated under UL certification)
- Dimensions 192 mm high x 230 mm wide x 94 mm deep
  (7.56 in. high x 9.06 in. wide x 3.7 in. deep)
- Weight 1 kg (2.2 lb.)
Panel-mount versions
- IP65 (front only)
- Dimensions 96 mm x 96 mm x 162 mm deep
  (3.78 in. x 3.78 in. x 6.38 in. deep)
- Weight 0.6 kg (1.32 lb.)

Cable entry types
Standard: 5 or 7 x M20 cable glands
North American: 7 x knockouts suitable for ½ in. Hubble gland

Power supply
Voltage requirements
- 100 to 240 V AC, 50 / 60 Hz (90 V min. to 264 V max. AC)
- 12 to 30 V DC
Power consumption
10 W
Insulation
Mains to earth (line to ground) 2 kV RMS

Environmental data
Operating temperature limits
-20 to 55 °C (–4 to 131 °F)
Storage temperature limits
-25 to 75 °C (–13 to 167 °F)
Operating humidity limits
Up to 95 %RH non condensing

EMC
Emissions and immunity
Meets requirements of:
- EN61326 (for an industrial environment)
- EN50081-2
- EN50082-2

Approvals, certification and safety
Safety approval
UL
CE mark
Covers EMC & LV Directives
(including latest version EN 61010)
General safety
- EN61010-1
- Overvoltage Class II on inputs and outputs
- Pollution category 2

Languages
Languages configurable:
- English
- French
- German
- Italian
- Spanish
