Power and productivity  
for a better world™

## What's New

### BOGOHO extended!

#### Buy-One, Get-One, Half-Off parts repair

Buy one repair at list price, get half-off the second part repair list price of equal or lesser value. **Offer extended to 3/31/13.** Read more at: <http://goo.gl/aBelM>

#### Automation Sentinel

#### Guidelines for evolving your control system

#### Top 10 ways to justify an automation system upgrade

# Automation Sentinel just got better

Steven Burt

Automation Sentinel, our control system lifecycle management program, has always offered peace of mind by providing 24/7 tech support, system upgrades, a path to your state-of-the-art dream system,

a choice of three levels of service to better fit your control system management strategy, – all at a fixed annual cost. Read about new features in this issue. If you are interested a subscription, please contact me today.

## New Automation Sentinel features for all subscribers

### 1) My Control System

My Control System is a new secure web site with everything you need to better manage your control system including software license information, your ABB service contacts, technical documentation, software updates and more.

#### My Control System features:

- Check performance and software status of the installed control system
- Download documentation and software updates tailored to your control system
- Quickly access all safety reports, alerts or product documents relevant to your installed ABB control system
- See available training and access to recorded sessions
- Contact information to the first point of contact in the ABB local service organization

For more information about My Control System, visit: <http://goo.gl/3Zugt>

### 2) Benchmark Report and Core Fingerprints

#### System 800xA Benchmark Report

The System 800xA Benchmark is an analysis report of the system only available from My Control System. It identifies out of spec and less than optimal system settings, configurations and conditions that may result in disturbances over time.

The benchmark provides an automated control system health check, comparing measured results with actual specs, requirements and recommendations.

Deviations from the expected results are available in a report, which presents a summary of the results in easy-to-read “traffic light” tables, allowing you to prioritize recommendations based on criticality.

The System 800xA Benchmark offers the following benefits:

- Easy-to-use tool for system data collection (on-site or remotely)
- Free to all Automation Sentinel subscribers
- Report remains available on My Control System for future reference
- Run reports whenever you like

## System 800xA Core Fingerprint Report

The System 800xA Core Fingerprint interprets the findings from the 800xA Benchmark and provides specific recommendations to reach maximum system performance and security.

The System 800xA Core Fingerprint report provides a comprehensive diagnostic analysis of system performance. It reads configuration and performance parameters from your 800xA system, and compares them to system requirements and best practices. The report identifies possible defects or deficiencies, which could impede the process control availability, reliability or operational performance.

It validates the 800xA core system structure, including: Software installation requirements; Windows domain functionality and configuration; resources utilization on servers and clients; network performance; hardware components; Aspect Directory database health; and error logs.

The System 800xA Core Fingerprint offers the following benefits:

- An in-depth report that simplifies your management decision process by focusing on high impact opportunities for improvement
- A custom improvement plan that provides a clear path to quickly closing performance gaps
- Provides a solid foundation for continuous improvement based on proven data analysis methodology

## 3) Training

### Web Coach

Web Coach online training sessions are exclusive and free of charge to all Automation Sentinel subscribers. Topics cover basic system maintenance for System 800xA, Freelance, Compact 800, Advant, MOD 300 and Symphony control systems. Log on to My Control System for a schedule of

### Sample Web Tech Talk Sessions

Visit My Control System for complete list of sessions offered

Session	Session Topic	Date	Session 1 (EST)	Session 2 (EST)
WT248	Freelance Converter for SIMATIC STEP 7	March 20	4:00 am	10:00 am
WT247	When to use 800xA Batch	April 17	6:30 am	10:00 am
WT237	800xA Workplace set-up: Good practice	May 8	6:00 am	10:00 am
WT236	800xA Advanced graphic techniques	May 29	6:00 am	10:00 am

The screenshot displays the 'System details' page of the My Control System. It includes a navigation menu with 'Home', 'Reports', and 'System data files'. A main image shows a control room with multiple monitors. Below the image, the 'System Details' section identifies the system as 'SID31807, Big System, MCS US' and provides general information and support deliverables. The 'Automation Sentinel' section shows the system is active, with a new level and an expiry date of 3/31/2013. It offers links for system reports, product documents, software downloads, web coach, and system service files. 'Web Tech Talks' are also listed with an expiry date of 9/21/2013. The 'General availability' section includes safety reports and product alerts, and available trainings. A 'Licenses' table is shown at the bottom, listing license keys, products, and versions.

License	Product	License version	Product version
[+/-] SL073001712272032	800xA 5.1 System	1	5.1
[+/-] SL109180809021042	System 800xA Core Fingerprint Report	1	1.0

On the right side of the interface, there are three contact boxes: 'ABB Local Service Contact' for Steven Burt, 'Control System Administrator' for Anne Stevenson, and 'Maintenance Engineers' listing Mark Smith.

**My Control System is a secure, web-based platform available to all ABB control system users that contains comprehensive information and services for your ABB control system**

topics and dates, or to register.

### Web Tech Talks

Live, interactive and in-depth web sessions with a focus on advanced technical topics.

These sessions are presented by ABB R&D and consulting specialists. Each live session includes Q&A and is recorded for later viewing. Visit My Control System for complete schedule, to register, and view previously recorded Web Tech Talks.

### Classroom Expert Workshop and Certification discount

Expert Workshops provide information not only for control systems, but also cover design principles, best practices and methodologies, and troubleshooting.

Advanced in-person training workshops for senior engineers experienced with control application design. Expert Workshops have prerequisite requirements, and cover specific

subjects and specific customer training and certification requirements. US workshops are hosted at ABB University training centers.

## Exclusive offers for subscribers

Special offers and services exclusive for subscribers, include:

### Complimentary

- System Benchmark Reports for 800xA system users
- Web Coach Web online training
- Substantial savings on parts and upgrade kits

### Fee-based

- Microsoft Cyber Security Patch Delivery service. Conveniently helps keep your system up-to-date with recommended and ABB approved security patches
- On-line, live, interactive, Tech Talks
- System 800xA Core Fingerprint Reports

# Automation Sentinel is the most effective way to extend the useful life of your control system

As new technology advances and business requirements change, many customers have adopted the strategy of extending the service life of their process control systems.

The Automation Sentinel lifecycle support program supports this strategy. Automation Sentinel offers a range of services to support and extend the life and reliability of your ABB systems.

As the OEM, we are uniquely positioned to provide these services including maintenance support, system evolution, and continuous enhancement programs for your ABB control system.

## Automation Sentinel Advantages:

- **Complete flexibility** allows you to improve your control system over time. Always the best, low risk path forward
- **Continuous optimization** of your process operations – Improves system availability, performance and reliability – with predictable costs
- **Protection of intellectual property** – your operator graphics and control programs are protected; no need to rip-and-replace to take advantage of the latest technology
- **Supports changing business goals** with flexible lifecycle support – introduce new technology – at your own pace

## Automation Sentinel for third party controllers

Honeywell, Emerson, Invensys, Siemens, others

ABB now offers the ability to evolve from other vendors' systems such as Honeywell TDC2000, TDC3000, and Experion, Emerson Fisher RS3, Provox and DeltaV, Siemens Teleperm and WinCC/PCS7, and Invensys Foxboro I/A. This capability provides the flexibility to limit changes to specific areas where they will create the most gain and Return on Investment (ROI); providing a low-risk, incremental strategy that adds value.

Evolving to System 800xA helps to develop a strategy to allow expanded system functionality that builds on the foundation of control products and applications already in place, while improving the overall reliability

of the installed process automation system. This expanded functionality includes simple connectivity to MES and ERP systems and easy to implement solutions that integrate Computer Maintenance Management Systems (CMMS), drive systems, and electrical systems using IEC61850.

## Evolve to System 800xA from:

- Emerson DeltaV, Provox or Fisher RS3
- Honeywell TDC2000, TDC3000 or Experion
- Siemens Teleperm M, WinCC or PCS7
- Invensys Foxboro I/A
