

Worldwide energy usage will grow over 40% by 2050.

Is your business prepared to meet the demand?

To keep pace with rising energy consumption, organizations must:

 **reduce**
energy consumption and emissions

 **lower**
energy costs

 **ensure**
energy reliability

 **achieve**
environmental sustainability

Lighting and HVAC systems consume 42% of global energy¹

Manufacturing facilities use 95.1 kilowatt-hours (kWh) of electricity/sq. ft annually²

Cloud-based energy monitoring & management enables businesses to:

- Have continuous, holistic visibility of energy usage
- Identify inefficiencies, track load profiles and optimize systems in real time
- Implement predictive maintenance to reduce downtime

A smart energy management system pays for itself

up to **45%** reduction in energy consumption

up to **20%** savings on your energy bill

up to **20%** reduction in maintenance costs
